The building of AIC-144 Sigma cyclotron was finished in April 1987. The works on beam optimization were carried out in 1988 and 1989. The main results of these works are given together with technical parameters obtained during the start-up. (A.S.).

3973 (PNL–8372) **Evaluation of S-101 course "Supervisors' Orientation to Occupational Safety in DOE" taught in Stanford, California, July 28, 1992–July 31, 1992.** Wright, T.S. Pacific Northwest Lab., Richland, WA (United States). Oct 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93002954. Source: OSTI; NTIS; GPO Dep.

This report summarizes trainee evaluations for the Safety Training Section Course, "Supervisors' Orientation to Occupational Safety in DOE" in Stanford, California. Section 1.1 and 1.2 summarize the quantitative course evaluations that trainees provided upon completion of the course. Appendix A provides a transcript of the trainees' written comments. Numeric Course ratings were generally positive and show that the course material and instruction were very effective. Written comments supported the positive numeric ratings. The course content and knowledge gained by the trainees exceeded most of the students' expectations of the course. Results from the final examination showed that students gained significant koowledde from the course.

3974 (SLAC-PUB–5928) **The Next Linear Collider Test Accelerator.** Paterson, J.M.; Ruth, R.D.; Adolphsen, C.; Bane, K.L.; Burke, D.L.; Callin, R.S.; Caryotakis, G.; Cassel, R.L.; Clark, S.L.; Deruyter, H.; Fant, K.; Fuller, R.W.; Heifets, S.A.; Hoag, H.A.; Humphrey, R.; Keicher, A.J.; Kheifets, S.; Koontz, R.F.; Lavine, TStanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1992. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-920706–39: International conference on high energy accelerators, Hamburg (Germany), 20-24 Jul 1992). Order Number DE93001824. Source: OSTI; NTIS; INIS; GPO Dep.

During the past several years, there has been tremendous progress on the development of the RF system and accelerating structures for a Next Linear Collider (NLC). Developments include high-power klystrons, RF pulse-compression systems and damped/detuned accelerator structures to reduce wakefields. In order to integrate these separate development efforts into an actual X-band accelerator capable of accelerating the electron beams necessary for an NLC, we plan to build an NLC Test Accelerator (NLCTA). The goal of the NLCTA is to bring together all elements of the entire accelerating system by constructing. and reliably operating an engineered model of a high-gradient linac suitable for the NLC. The NLCTA win serve as a test-bed as the design of the NLC evolves and will provide a model upon which a reliable cost estimate can be based. In addition to testing the RF acceleration system, the NLCTA will be able to address many questions related to the dynamics of the beam during acceleration. In this paper, we will report on the status of the design and component development for the NLC Test Accelerator.

3975 (SLAC-PUB–5948) **A 2 to 4 nm high power FEL on the SLAC linac.** Pellegrini, C. (California Univ., Los Angeles, CA (United States). Dept. of Physics); Rosenzweig, J.; Nuhn, H.D.; Pianetta, P.; Tatchyn, R.; Winick, H.; Bane, K.; Morton, P.; Raubenheimer, T.; Seeman, J.; Halbach, K.; Kim, K.J.; Kirz, J. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (LBL–32970;CONF-9208142–13: 14. international free electron laser conference, Kobe (Japan), 23-28 Aug 1992). Order Number DE93004091. Source: OSTI; NTIS; INIS; GPO Dep.

We report the results of preliminary studies of a 2 to 4 nm SASE FEL, using a photoinjector to produce the electron beam, and the SLAC linac to accelerate it to an energy up to 10 GeV. Longitudinal bunch compression is used to increases ten fold the peak current to 2.5 kA, while reducing the bunch length to the subpicosecond range. The saturated output power is in the multi-gigawatt range, producing about 10^{14} coherent photons within a bandwidth of about 0.2% rms, in a pulse of several millijoules. At 120Hz repetition rate the average power is about 1 W. The system is optimized for x-ray microscopy in the water window around 2 to 4 nm, and will permit imaging a biological sample in a single subpicosecond pulse.

3976 (SLAC-PUB–5955) **Electron-positron colliders and other accelerator technologies.** Siemann, R.H. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1992. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-920837–16: 26. international IUPAP conference on high energy physics, Dallas, TX (United States), 6-12 Aug 1992). Order Number DE93004018. Source: OSTI; NTIS; INIS; GPO Dep.

The accelerator physics and technology of hadron colliders, heavy quark factories, and linear colliders are reviewed. The status and performance of major high energy accelerators are summarized.

3977 (SSCL-Preprint–122) **Object-oriented simulation for the Superconducting Super Collider.** Zhou, J. Superconducting Super Collider Lab., Dallas, TX (United States). Jun 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. (CONF-930113–1: Object oriented simulation conference, San Diego, CA (United States), 17-20 Jan 1993). Order Number DE92015962. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes the design and implementation of an object-oriented simulation environment called OZ for the Superconducting Super Collider (SSC). The design applies object-oriented technology to data visualization, behavior modelling, dynamic simulation and version control. A meta class structure is proposed to model different types of objects in large systems by their functionality. OZ provides a direct-manipulation user interface which allows the user to visualize the data as an object in the database and interactively model the component of the system. Modelling can be exercised at different levels of the class hierarchy and then can be dynamically bound into a system for simulation. Inheritance is used to derive new configurations of the system or subsystem from the existing one, and specify an object's behavior. Delegation is used to construct a system by instantiating existing objects and "stealing" their methods by delegators. The implementation uses C++, GLISTK library, InterViews 2.6, ISTK library, GNU C++ library, GLISH event sequencer, NIH class library, and ObjectStore.

3978 (FNAL/C–92/241) **SSC collider dipole magnets field angle data.** Kuchnir, M. (Fermi National Accelerator Lab., Batavia, IL (United States)); Bleadon, M.; Schmidt, E.; Bossert, R.; Carson, J.; Delchamps, S.W.; Gourlay, S.; Hanft, R.; Koska, W.; Lamm, M.J.; Mazur, P.O.; Orris, D.; Ozelis, J.; Strait, J.; Wake, M.; DiMarcoFermi National Accelerator Lab., Batavia, IL (United States). Sep 1992. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-920706–41: International conference on high energy accelerators, Hamburg (Germany), 20-24 Jul 1992). Order Number DE93001952. Source: OSTI; NTIS; INIS; GPO Dep.

In the fabrication of both 40 and 50 mm collider dipole superconducting magnets, surveys of the direction of the magnetic field along their length have been taken. This data besides being used for certifying compliance with the specifications for the finished magnet, yields interesting information on the straightness and rigidity of the coil placement between some stages in their manufacture and testing. A discussion on the measuring equipment and procedures is given. All of the 40 mm magnets that were built or cryostat at Fermilab have at least one of these surveys, and a summary of the data on them is presented. Most of the 50 mm magnets built and cold tested at Fermilab have been surveyed before and after insertion in the cryostat and before and after being cold tested. A summary of this data is also presented.

3979 (KIYal–91-6) **Problems of neutron accelerating tubes "SAPR" construction using modern electronic computers.** Gul'ko, V.M.; Gusarov, V.N.; Izmajlov, A.V.; Kolomiets, N.F.; Mikhajlenko, B.V.; Shikanov, A.E.; Yakovlev, K.I. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. 25p. (In Russian). Order Number DE93607611. Source: OSTI; NTIS (US Sales Only); INIS.

The results of the work on creating the pack of applied programmes for calculating the ion-optical system of accelerating neutron tubes are given. The basis of the pack is constituted by the programmes of calculating of electromagnetic fields in the ion-optical systems made by the method of singular integral equations, particle dynamics in the static electromagnetic fields, static simulation of distribution of space charge of the accelerated particles, calculation of neutron flux produced by tube target. The pack contains a number of service programmes providing variation of electrode structure and target parameters, conditions of injection etc., and output service programmes. 6 refs.; 9 figs. (author).

3980 (KIYal–91-11) **The formation and diagnostics of a beam in correlation and neutron experiments.** Zerkyin, V.V.; Konfederatenko, V.Yi.; Povoroznik, O.M.; Struzhko, B.G.; Shidlik, A.M. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. 10p. (In Ukrainian). Order Number DE93607610. Source: OSTI; NTIS (US Sales Only); INIS.

The description of diagnostics and beam formation system, that is used in experiments of spectra of triple coincidence of four-particle ^{2}H(d,ppn)n reaction (kinematic full experiment) is presented in the paper. The setup allows to make measurements of cyclotron beam energy by time-of-flight method, of effective on-off ratio and to control the geometrical beam sizes. 2 refs.; 3 figs. (author).

3981 (SLAC–405) **International workshop on final focus and interaction regions of next generation linear colliders: Proceedings.** Stanford Linear Accelerator Center, Menlo Park, CA (United States). [1992]. 380p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9205260–: International workshop on final focus and interaction regions of next generation linear colliders, Stanford, CA (United States), 2-6 May 1992). Order Number DE93002517. Source: OSTI; NTIS; INIS; GPO Dep.

The first day of the workshop was devoted to four plenary "issues" talks, one for each working group: Beam-Beam Interaction, Detector, Hardware, and Optical Design. The last day was devoted to plenary talks summarizing the activities of the working groups. Each of the three remaining days there,was a short morning plenary devoted to a brief summary of the preceding day and an announcement of planned working group discussions for that day. The transparencies for the "issues" and "summary" talks are included in this volume, along with some remarks from the working group chairpersons. Very briefly, the beam-beam group continued to address the quantitative study of QED induced backgrounds, and attempted to better understand the nature and prevalence of QCD millijets. The detector group attempted to identify the impact on masking and detector design of the beam-beam backgrounds, the synchrotron radiation induced backgrounds from beam halos and muon backgrounds produced primarily in collimators. Nanosecond timing elements needed in conjunction with multi-bunch operation were discussed. The hardware group addressed the problem of magnet design and support, especially the final doublet magnets suspended within the detector environment, and instrumentation issues, such as high resolution beam position monitors. The optics group discussed new final focus system ideas, collimator design, and improvement of beamline tolerances. If you were not here to participate, we hope that this volume will help you in your orientation to these problems.

3982 (SSCL-Preprint–150) **Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space.** Lopez, G. Superconducting Super Collider Lab., Dallas, TX (United States). Sep 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. Order Number DE93002046. Source: OSTI; NTIS; INIS; GPO Dep.

The Lagrangian, the Hamiltonian, and the Generalized Linear Momentum of an autonomous dynamical system defined in a hyperbolic flat space are studied in terms of a constant of motion associated with this system. Some restrictions in the symmetry of the Lagrangian are required in order for the Euler-Lagrange equations to be satisfied. The one-dimensional relativistic motion is given as an example of the approach.

3983 (ANL/APS/TB–2) **Use of a mirror as the first optical component for an undulator beamline at the APS.** Yun, W.; Khounsary, A.; Lai, B.; Gluskin, E. Argonne National Lab., IL (United States). Sep 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE93001338. Source: OSTI; NTIS; INIS; GPO Dep.

In the design of Sector II of the Synchrotron Radiation Instrumentation (SRI) CAT, an x-ray mirror with multiple coatings is chosen as the first optical component of the undulator beamline. Two significant advantages of using the mirror are: A significant reduction in the peak radiation heat flux and total power on the downstream monochromator, and (2) availability of the wide-bandpass undulator spectrum between 0–30 key to experimental

stations with substantially reduced radiation shielding requirements. The second advantage also allows us to place the monochromator outside the first optics enclosure (FOE) at a large distance from the source to further reduce the peak heat flux on the monochromator. The combined effect is that the inclined crystal monochromator may not be necessary, and a multilayer monochromator can be used because the expected heat fluxes are less than the value that has been demonstrated for those monochromators.

3984 (ANL/CP–76107) **Charged-particle beam diagnostics for the Advanced Photon Source (APS).** Lumpkin, A.H.; Decker, G.; Kahana, E.; Patterson, D.; Sellyey, W.; Wang, X.; Chung, Y. Argonne National Lab., IL (United States). [1992]. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9208142–7: 14. international free electron laser conference, Kobe (Japan), 23-28 Aug 1992). Order Number DE93001855. Source: OSTI; NTIS; INIS; GPO Dep.

Plans, prototypes, and initial test results for the charged-particle beam (e^-, e^+) diagnostic systems on the injector rings, their transport lines, and the storage ring for the Advanced Photon Source (APS) are presented. The APS will be a synchrotron radiation user facility with one of the world's brightest x-ray sources in the 10-keV to 100-keV regime. Its 200-MeV electron linac, 450-MeV positron linac, positron accumulator ring, 7-GeV booster synchrotron, 7-GeV storage ring, and undulator test lines will also demand the development and demonstration of key particle-beam characterization techniques over a wide range of parameter space. Some of these parameter values overlap or approach those projected for fourth generation light sources (linac-driven FELs and high brightness storage rings) as described at a recent workshop. Initial results from the diagnostics prototypes on the linac test stand operating at 45-MeV include current monitor data, beam loss monitor data, and video digitization using VME architecture.

3985 (ANL/CP–77394) **Simulated high heat load performance of an inclined crystal monochromator.** Macrander, A.T.; Khounsary, A.M.; Graham, M. Argonne National Lab., IL (United States). Sep 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-920792–34: Society of Photo-Optical Instrumentation Engineers (SPIE) international symposium on optical applied science and engineering, San Diego, CA (United States), 19-24 Jul 1992). Order Number DE93000506. Source: OSTI; NTIS; INIS; GPO Dep.

Thermal distortions of an inclined silicon crystal subjected to the high heat loads expected for a 2.5 m long undulator at the Advanced Photon Source were simulated, and the distortions were then used to calculate (111),(111) (+,–) double crystal rocking curves. The inclination angle for all the simulations was either 80° or 85°. The first crystal was assumed to be a slab that was uniformly cooled on its underside with liquid gallium. For some of the simulations, the undulator gap was set to 11.5 mm corresponding to K=2.2, and the crystals were oriented to diffract the first harmonic energy at 4.2 keV. For K=2.2, the total x-ray power incident on the crystal is 3.8 kW , and the peak power density transverse to the beam is 148 W/mm^2. Rocking curve broadening in these cases was found to be no more than 0.42 arcsec. Simulations for the third harmonic at K=2.2 were also performed, and the broadening was found to be no more than 1.87 arcsec. In other simulations the undulator gap was widened, and rocking curves for the third harmonic at K=1.5 (19.9 key) and the first harmonic at K=1.2 (8.2 keV) were obtained. Only weak broadening was found for these cases as well. Finally, rocking curves at 4.2 keV were not altered if a slit that passed only the central cone of the undulator was placed in front of the first crystal.

3986 (BNL–47102) **Design and performance of the Booster Beam Position Monitor system.** Ciardullo, D.J.; Abola, A.; Beadle, E.; Brennan, J.M.; Smith, G.A.; Thomas, R.; Van Zwienen, W.; Warkentien, R.; Witkover, R.L. Brookhaven National Lab., Upton, NY (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920706–40: International conference on high energy accelerators, Hamburg (Germany), 20-24 Jul 1992). Order Number DE93001971. Source: OSTI; NTIS; INIS; GPO Dep.

Instrumentation has bean built to measure heavy ion and proton beam orbits over an intensity range of 2×10^{10} to 1.5×10^{13} particles per pulse. Twenty-two horizontal and 24 vertical pairs of electrostatic Pickup Electrodes (PUEs), each with a built-in test port, are interfaced with wideband, gain selectable front end electronics. The resulting real-time signals are linearly related (both in amplitude and temporal response) to the sum and difference of the charge induced on each electrode due to passing beam. PUE signals (or their sum and difference) are available at any detector location for use by other Booster systems e.g., the Tune Meter, Transverse Damper, Radial loop control, etc. Data acquistion electronics at each, location integrate the processed front end signals over a selectable number of bunches, then digitize and transmit the integrated sum and difference to the host computer. Data normalization is done in the software, which also provides various orbit acquisition and display options to the user. This paper will describe the Booster Beam Position Monitor system, its performance objectives and the key design aspect used to meet these objectives. In addition, initial results will be presented.

3987 (BNL–47602) **Time dependent magnetization effects in superconducting accelerator magnets.** Ghosh, A.K.; Robins, K.E.; Sampson, W. Brookhaven National Lab., Upton, NY (United States). [1992]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920706–43: International conference on high energy accelerators, Hamburg (Germany), 20-24 Jul 1992). Order Number DE93002322. Source: OSTI; NTIS; INIS; GPO Dep.

The long time drift of the sextupole harmonic b_2, at injection fields is a common feature of superconducting accelerator magnets and, as yet, is not well understood. Measurements of the magnetization decay of superconducting wires and cables show that the normal magnetization decay is not the primary source of the large b_2 drift observed in magnets. Along with this phenomena has been the recent observation of an axial variation in b_2 of accelerator dipoles. This periodic variation in the field along the axis has been observed in a large number of SSC, RHIC and other superconducting dipoles. In all cases the periodicity of the variation matches the lay pitch of the cables used in the magnets. The time dependence of the development and the decay of these field variations has been examined, and found to vary from magnet to magnet. Non-uniform current distribution in the strands of the cable appear to be the cause of this axial variation and may also be responsible for the observed b_2 drift. Details of these measurements and sources for the non-uniform current distribution are discussed in this paper.

3988 (BNL–47620) **The characterization and selection of superconductor wire and cable for RHIC.** Greene, A.F.; Garber, M.; Ghosh, A.K.; McChesney, D.; Morgillo, A. Brookhaven National Lab., Upton, NY (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920706–44: International conference on high energy accelerators, Hamburg (Germany), 20-24 Jul 1992). Order Number DE93002321. Source: OSTI; NTIS; INIS; GPO Dep.

This report describes the procedures used to select a single vendor for superconductor cable for the RHIC 80 mm dipole and quadrupole magnets, and some insertion dipoles with 110 mm aperture. Experience gained at BNL through involvement with the HERA and SSC Projects provided valuable Teaming experiences for this work. A performance specification was prepared and three qualified vendors were selected to complete a preproduction lot of 63,000 ft. of cable (approximately five multifilament billets). Samples were sent to BNL from every wire spool and from every continuous cable length. Mechanical, electrical and magnetization measurements were made to characterize the material. A data base was used to collect information, to compare BNL and vendor measurements and to study uniformity. Results are presented without specific identification of the vendors involved.

3989 (BNL–47928) **Fast excitation wiggler field measurement results.** Armendariz, J.; Gallardo, J.; Romano, T.; van Steenbergen, A. Brookhaven National Lab., Upton, NY (United States). Aug 1992. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE93002327. Source: OSTI; NTIS; INIS; GPO Dep.

As part of the program of Inverse Free Electron Laser (IFEL) Accelerator Development, the development of fast excitation, planar wigglers with high K magnitude has been pursued. This paper discusses the observed characteristics of a variable period length, tapered, wiggler as well as the procedures of measurement. The behaviour of a constant period length magnet with varying Vanadium Permendur (VaP) and field reflector thickness is also discussed.

3990 (BNL–47942) **Quench performance of six similar 17 m-long, 40 mm-aperture SSC model dipoles.** Wanderer, P.; Willen, E. Brookhaven National Lab., Upton, NY (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920331–59: International industrial symposium on the super collider, New Orleans, LA (United States), 4-6 Mar 1992). Order Number DE93001965. Source: OSTI; NTIS; INIS; GPO Dep.

The quench performance of the final six 17 m-long, 40 mm-aperture SSC model dipoles made at Brookhaven National Laboratory is presented in summary form. The six magnets are of similar construction, except for two features (1) the copper-to-superconductor ratio of the inner cable (either 1.3:1 or 1.5:1) and (2) the axial Preload at 4.35K. The inner coil quench performance does not appear to be correlated with the copper-to-superconductor ratio. There does appear to be a correlation between the outer coil quench performance and the cold axial preload.

3991 (BNL–47964) **Analysis of the superconducting wiggler magnets for the ATF Harmonic Generation FEL experiment.** Zhang, X.; Ben-Zvi, I.; Ingold, G.; Krinsky, S.; Yu, L.H. Brookhaven National Lab., Upton, NY (United States). [1992]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9208142–6: 14. international free electron laser conference, Kobe (Japan), 23-28 Aug 1992). Order Number DE93001974. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper, we consider the superconducting wiggler magnet under construction for the High Gain Harmonic Generation experiment (HGHG) at the Accelerator Test Facility (ATF) at BNL. This wiggler consists of an energy modulation section, a dispersion magnet and a radiator section. We present an analysis of the dispersion magnet and the end effects in the other wiggler sections. The purpose of the dispersion magnet is to convert energy modulation of the electron beam into spatial bunching. For the dispersion magnet, we discuss the physical requirements, analyze the magnetic design, determine the focusing properties, and consider the effect of departures from ideal behavior on the FEL gain. In the modulator and radiator wigglers we analyze the effects due to the ends of the wiggler and discuss their correction. In addition, the localized field produced by a trim coil for horizontal beam steering is investigated.

3992 (BNL–47970) **Laser diagnostics for picosecond e-beams.** Pogorelsky, I. (STI Optronics, Bellevue, WA (United States)); Ben-Zvi, I. Brookhaven National Lab., Upton, NY (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016 ;AC06-83ER40128. (CONF-9206193–15: Advanced accelerator concepts workshop, Port Jefferson, NY (United States), 14-20 Jun 1992). Order Number DE93001972. Source: OSTI; NTIS; INIS; GPO Dep.

We propose a novel approach to picosecond e-bunch/laser pulse synchronization and spatial alignment based upon refraction and reflection of a laser beam on a plasma column created by relativistic electrons traveling through a gas or solid optical material. The technique may be used in laser accelerators and for general subpicosecond e-beam diagnostics.

3993 (BNL–48004) **Photoemission from Ag, Cu, and CsI.** Srinivasan-Rao, T.; Fischer, J.; Tsang, T. Brookhaven National Lab., Upton, NY (United States). Jun 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9206193–16: Advanced accelerator concepts workshop, Port Jefferson, NY (United States), 14-20 Jun 1992). Order Number DE93001964. Source: OSTI; NTIS; INIS; GPO Dep.

Photoemission characteristics of three different cathodes, CsI, Ag film and Cu were investigated. CsI, upon irradiation by 213 nm, 10ps laser pulse yields a quantum efficiency of 4% at O.2μJ input energy. The saturation mechanism observed at higher input energies require further investigation. Ag film, upon irradiation by 630 nm, 300 fs laser emit prompt photoelectrons after absorbing 2 photons. There was no evidence of optical damage of the film up to 10^{11} W/cm^2. At low intensities, photoemission from Cu is a simple ν-e^- interaction, the nonlinearity of the process depending strongly on trace impurities. At higher intensities, there appears to be a change in the emission mechanism.

3994 (BNL–48033) **Synchrotron radiation sources and condensers for projection x-ray lithography.** Murphy, J.B. (Brookhaven National Lab., Upton, NY (United States)); MacDowell, A.A.; White, D.L.; Wood, O.R. II. Brookhaven National Lab., Upton, NY (United States). [1992]. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9204120–4: Soft-x-ray projection lithography topical meeting, Monterey, CA (United States), 6-8 Apr 1992). Order Number DE93002964. Source: OSTI; NTIS; INIS; GPO Dep.

The design requirements for a compact electron storage ring that could be used as a soft x-ray source for projection lithography are discussed. The design concepts of the x-ray optics that are required to collect and condition the radiation in divergence, uniformity and direction to properly illuminate the mask and the particular x-ray projection camera used are discussed. Preliminary designs for an entire soft x-ray projection lithography system using an electron storage ring as a soft X-ray source are presented. It is shown that by combining the existing technology of storage rings with large collection angle condensers, a powerful and reliable source of 130Å photons for production line projection x-ray lithography is possible.

3995 (BNL–48048) **Design studies on the RHIC position monitor system.** Shea, T. Brookhaven National Lab., Upton, NY (United States). Sep 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (AD/RHIC–114). Order Number DE93001439. Source: OSTI; NTIS; INIS; GPO Dep.

The Relativistic Heavy Ion Collider (RHIC) under construction at Brookhaven National Laboratory will consist of two superconducting storage rings 3.8 km in circumference sharing one tunnel in a side by side configuration. After injection from the existing AGS, the collider will accelerate and store a range of ion species extending from protons through gold to energies of 250 GeV for protons and 100 GeV/nucleon for fully stripped gold ions. Storage times should exceed 10 hours. As in most modern colliders the RHIC beam position monitor system is the most extensive beam diagnostic in terms of both cost and channel multiplicity. The final system will consist of approximately 500 position monitors with over 600 measurement planes of electronics. Development of this system began early so that the monitors would be available for installation into the magnet cryostats. The following document summarizes some of the efforts undertaken during the design phase of this system. Because much of this work is still in progress, the document is necessarily incomplete and some details may not reflect the final system configuration.

3996 (FNAL/C–92/238) **Ac loss measurement of SSC dipole magnets.** Delchamps, S.; Hanft, R.; Jaffery, T.; Kinney, W.; Koska, W.; Lamm, M.J.; Mazur, P.O.; Orris, D.; Ozelis, J.P.; Strait, J.; Wake, M. Fermi National Accelerator Lab., Batavia, IL (United States). Sep 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9206281–3: ICFA workshop on AC superconductivity, Tsukuba (Japan), 23-25 Jun 1992). Order Number DE93001950. Source: OSTI; NTIS; INIS; GPO Dep.

AC losses in full length and 1.5 m model SSC collider dipoles were successfully measured by the direct observation of energy flow into and out of magnets during a ramp cycle. The measurement was performed by using two double-integrating type digital volt meters (DVM's) for current and voltage measurement. Measurements were performed for six is m long ASST magnets and five 1.5 m long model magnets, inducting one 40 mm diameter magnet. There were large variations in the eddy current losses. Since these magnets use conductors with slight deviations in their internal structures and processing of the copper surface depending on the manufacturer, it is likely that there are differences in the

contact resistance between strands. Correlation between the ramp rate dependence of the,quench current and the eddy current loss was evident.

3997 (FNAL/C–92/240) **Magnetic field measurements of full length 50 mm aperture SSC dipole magnets at Fermilab.** Strait, J. (Fermi National Accelerator Lab., Batavia, IL (United States)); Bossert, R.; Carson, J.; Delchamps, S.W.; Gourlay, S.; Hanft, R.; Koska, W.; Kuchnir, M.; Lamm, M.J.; Mazur, P.O.; Mokhtarani, A.; Orris, D.; Ozelis, J.; Wake, M.; Devred, A.; DiMarFermi National Accelerator Lab., Batavia, IL (United States). Sep 1992. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-920706–42: International conference on high energy accelerators, Hamburg (Germany), 20-24 Jul 1992). Order Number DE93001951. Source: OSTI; NTIS; INIS; GPO Dep.

Thirteen 16 m long, 50 mm aperture SSC dipole magnets, designed jointly by Fermilab, Brookhaven National Laboratory, Lawrence Berkeley Laboratory and the SSC Laboratory, have been built at Fermilab. The first nine magnets have been fully tested to date. The allowed harmonics are systematically shifted from zero by amounts larger than the specification. The unallowed harmonics, with the exception of the skew sextupole, are consistent with zero. The magnet-to-magnet RMS variation of all harmonics is much smaller than the specification.

3998 (FNAL-TM–1797) **Antiproton accumulator in the Main Injector era.** Visnjic, V. Fermi National Accelerator Lab., Batavia, IL (United States). Sep 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. Order Number DE93003115. Source: OSTI; NTIS; INIS; GPO Dep.

I propose a new lattice for Fermilab Antiproton Accumulator. The lattice is designed with the aim of implementing higher bandwidth stochastic cooling systems, thus enabling the Accumulator to handle antiproton beam intensities expected in the Main Injector era. The design proposed here satisfies very well all the requirements for the new Accumulator concerning the lattice functions, stochastic cooling parameters, and the tunability of the machine.

3999 (INIS-mf–13375, pp. 50) **Neutron yield produced via 150 KeV mixed and atomic deuteron beans from thick Ti-T targets.** Hurani, S.Y.; Morozov, A.V.; Wanis, B.M.; Tahha, H.M. Tajoura Nuclear Research Centre, Tripoli (Libyan Arab Jamahiriya). 1984. 82p. 4000 (INP–1530/PL) **High-voltage feeders for beam extraction system of AIC-144 cyclotron.** Daniel, K.; Korecki, J. Institute of Nuclear Physics, Cracow (Poland). Jul 1990. 14p. (In Polish). Order Number DE93607618. Source: OSTI; NTIS (US Sales Only); INIS.

The main parameters of feeder are given. Its construction is described in detail. The schemes are presented. (A.S.).

4001 (IYaF–91-70) **Low aperture magnetic elements measurements.** Aleksandrov, V.A.; Mikhajlichenko, A.A.; Parkhomchuk, V.V.; Seryj, A.A.; Shil'tsev, V.D. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1991. 11p. Order Number DE93605897. Source: OSTI; NTIS (US Sales Only); INIS.

Two new methods of magnetic field measurements in low aperture elements are discussed. The first method uses thin magnetoresistive bismuth wire and the second-strained wire with AC. Principles of measuring used in the last technique are different from well known SLAC method of vibrating wire. Results of testing 0.38 T/mm quadrupole and VLEPP final focus test 3 T/mm lens are presented. Brief comparing of the lens axis determination precision of these methods is also discussed. 4 refs.; 8 figs.

4002 (KIYal–91-10) **Operation system of polarization experiments for accelerators.** Zaika, N.I.; Ofengenden, R.G.; Tokarev, V.P.; Shchur, A.M. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. 20p. (In Russian). Order Number DE93607623. Source: OSTI; NTIS (US Sales Only); INIS.

A multi-functional block of intercommunicational system to operate regimes of functioning of the polarized particle source, the accelerator and the storage system has been worked out and manufactured. Tuning has been made, capacity for work and practical capability of employment the block for experiments in nuclear physics has been verified. 5 refs.; 7 figs.; 2 tabs. (author).

4003 (LA-UR–92-2720) **Power coupler and cold window for seven-cell superconducting cavity vertical tests.** Gray, E.R.; Spalek, G. Los Alamos National Lab., NM (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9208109–63: 16. international LINAC conference, Ottawa (Canada), 23-28 Aug 1992). Order Number DE93000791. Source: OSTI; NTIS; INIS; GPO Dep.

For tests of the LANL 805MHz seven cell superconducting cavity, we are developing a variable coaxial rf power coupler. Its Q_{ext} will be variable over a range from 10^5 to 10^{12}. It will operate nominally at 3kW CW and lOOkW peak for high power processing. The coupler consists of a 3 inch driveline and window, a 3.45 inch T supported by a $\lambda/4$ shorted stub followed by a step transition to a 2 inch coupler port. A $\sim$ 6.6 Ohm impedance choke joint located at the step transition allows the large center conductor travel necessary for the Q_{ext} variation. The folded choke joint is located at a standing wave current node to keep its excitation below the multipacting level even at high power levels. A low contact-pressure sliding rf seal prevents arcing at the choke joints current node during its filling time.

4004 (LBL–32560) **Advancements in one-dimensional profiling with a long trace profiler.** Irick, S.C.; McKinney, W.R. Lawrence Berkeley Lab., CA (United States). Jun 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9206297–1: International symposium on optical fabric testing and surface evaluation, Tokyo (Japan), 6 Jun 1992). Order Number DE93000566. Source: OSTI; NTIS; GPO Dep.

Over the last several years the long trace profiler (LTP) has been evolving into a sophisticated machine capable of measuring surface profiles of very long dimensions. This report explains improvements, both hardware and software, that have helped to achieve accuracies and ranges in surface profiling that have been unobtainable until now. A comparison made by measuring standard optical surfaces on other instruments corroborates these accuracies.

4005 (LBL–32790) **Quadrupole magnets for the SSC.** Lietzke, A.; Barale, P.; Benjegerdes, R.; Caspi, S.; Cortella, J.; Dell'Orco, D.; Gilbert, W.; Green, M.I.; Mirk, K.; Peters, C.; Scanlan, R.; Taylor, C.E.; Wandesforde, A. Lawrence Berkeley Lab., CA (United States). Aug 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-920802–27: Applied superconductivity conference, Chicago, IL (United States), 23-28 Aug 1992). Order Number DE93002567. Source: OSTI; NTIS; INIS; GPO Dep.

At LBL, we have designed, constructed, and tested ten models (4-1meter, 6-5meter) of the Superconducting Super Collider (SSC) main-ring 5 meter focusing quadrupole magnet (211Tesla/meter). The results of this program are herein summarized.

4006 **Voltage regulation in linear induction accelerators.** Parsons, W.M. To Dept. of Energy. 19 Mar 1991. USAA patent application 7-671,23. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93002031. Source: OSTI; NTIS; GPO Dep.

Improvement in voltage regulation in a Linear Induction Accelerator wherein a varistor, such as a metal oxide varistor when it is placed in parallel with the beam accelerating cavity and the magnetic core. The non-linear properties of the varistor result in a more stable voltage across the beam accelerating cavity than with a conventional compensating resistance.

4007 (SAND–92-1841) **Beam transport physics issues for the recirculating linear accelerator.** Shokair, I.R. Sandia National

Labs., Albuquerque, NM (United States). Nov 1992. 37p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93004022. Source: OSTI; NTIS; INIS; GPO Dep.

The Recirculating Linear Accelerator (RLA) utilizes the Ion Focused Regime (IFR) of beam transport plus a ramped bending field to guide the beam around the curved sections. Several issues of beam transport are considered. Beam transverse perturbations that could result in growth of the ion hose instability are analyzed. It is found that transverse kicks due to bending field errors, energy mismatches and fringe fields are the most important. The scaling of these perturbations with beam and channel parameters is derived. The effect of ramping of the bending field on the preformed plasma channel is then considered. For RLA experimental parameters the effect is found to be very small. For high energies however, in addition to axial heating, it is found that ramping the field causes compression of the plasma channel along the radius of curvature. This compression results in a quasi-equilibrium plasma electron temperature along the field lines which leads to collisionless transport towards the walls. The analysis of compression is done in an approximate way using a single particle picture and the channel expansion is analyzed using an envelope solution which gives a simple expression for the expansion time. This solution is then verified by Buckshot simulations. For a bending field of 2 kG ramped in 2 μ-secs and an argon channel (RLA parameters) we estimate that the channel radius doubling time (along field lines) is of the order of 0.5 μ-secs. Finally the effect of electron impact ionization due to axially heated electrons by the action of the inductive field is estimated. It is found that in Argon gas the electron avalanche time could be as low as 0.5 μ-sec which is smaller than the field ramp time.

4008 (SINS–2087/ZDAJ/PP/B) **H^- Ions production in a discharge plasma and construction of some types of ion sources.** Lorkiewicz, J. Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland). Jan 1990. 55p. (In Polish). Order Number DE93607616. Source: OSTI; NTIS (US Sales Only); INIS.

The report presents a review of contemporary methods of H^- ions production, with particular emphasis on volume in plasmas. The first part shows the attempts by several authors to analyse theoretically the production of $H^-(D^-)$ ions in the low pressure plasma of a discharge as well as in the Penning-discharge and multicusp ion sources. Several types of volume-production, direct extraction sources are described: PIG-type sources, multicusp (bucket) sources and "sheet plasma" sources. (author).

4009 (SLAC–403) **The use and calibration of the Kern ME5000 Mekometer: Proceedings.** Bell, B. (ed.). Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1992. 86p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9206270–: Use and calibration of the Kern ME 5000 mekometer, Stanford, CA (United States), 18-19 Jun 1992). Order Number DE93002628. Source: OSTI; NTIS; GPO Dep.

This report discusses the following about the Kern ME5000 Mekometer, a device used to measure the length of accelerator housings: ME5000 Operation; ME5000 Test Measurements; ME5000 Data Reduction; Variance Component Analysis of Baseline Measurements; ME5000 Results; and Calibration and Use of the Mekometer ME5000 in the Survey of the Channel Tunnel.

4010 (SLAC-PUB–5899) **Superconducting accelerator magnets: A review of their design and training.** Palmer, R.B. (Stanford Linear Accelerator Center, Menlo Park, CA (United States)). Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-920837–21: ICHEP-26: 26th International Union of Pure and Applied Physics (IUPAP) conference on high energy physics, Dallas, TX (United States), 6-12 Aug 1992). Order Number DE93004088. Source: OSTI; NTIS; INIS; GPO Dep.

This paper reviews the basic mechanical designs of most of the superconducting magnets developed for high energy hadron accelerators. The training performance of these magnets is compared with an instability factor defined by the square of the current density in the stabilizing copper divided by the surface-to-volume ratio of the strands. A good correlation is observed.

4011 (SLAC-PUB–5919) **Downsampled bunch-by-bunch feedback for PEP II.** Hindi, H.A.; Briggs, D.; Fox, J.; Hosseini, W.; Hutton, A. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1992. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9204126–17: B factories: state of the art in accelerators, detectors, and physics, Stanford, CA (United States), 6-10 Apr 1992). Order Number DE93004090. Source: OSTI; NTIS; INIS; GPO Dep.

The PEP II B Factory requires a feedback system to damp out longitudinal synchrotron oscillations. A time-domain bunch-by-bunch feedback system has been proposed in which each bunch is treated as an oscillator being driven by disturbances from the other bunches. The phase is detected, filtered, and the feedback correction signal is applied by the kicker. Since we are damping energy oscillations using measurements of phase, the required feedback signal must be proportional to the amplitude of the phase oscillations but phase shifted by 90 degrees. This signal must be calculated for each of the 1658 bunches, in parallel. In the original proposal, it was estimated that a farm of approximately 480 digital signal processors (DIPS) would be required to implement the feedback system. However, using the technique of downsampling, this number can be reduced to about 50 DIPS. In what follows, we will briefly explain the basic idea of downsampling and its implementation.

4012 (SLAC-PUB–5950) **A Ti:Sapphire laser for the new polarized electron source.** Frisch, J.; Woods, M.B.; Zolotorev, M. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1992. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9208109–68: 16. international LINAC conference, Ottawa (Canada), 23-28 Aug 1992). Order Number DE93004016. Source: OSTI; NTIS; INIS; GPO Dep.

The SLAC polarized electron source uses a laser driven photo cathode gun. We have developed a Titanium Sapphire laser at SLAC to replace the dye laser currently used for the source. The new laser is designed to operate at wavelengths between 750 and 850 nm while producing 400mJ of energy in 1.6 ns pulses at 120 Hz. Installation on the accelerator is expected in January of 1993.

4013 (SSCL–602) **Limitations of a residual gas ionization beam profile monitor for the SSC Collider.** Meinke, R. (Superconducting Super Collider Lab., Dallas, TX (United States)); Nexsen, W.; Tsyganov, E.; Zinchenko, A. Superconducting Super Collider Lab., Dallas, TX (United States). Nov 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. Order Number DE93004390. Source: OSTI; NTIS; INIS; GPO Dep.

A residual gas ionization beam profile monitor for the superconducting Super Collider is considered in detail using the Monte Carlo simulation code. It is shown that a good spatial resolution could be obtained using a combination of strong electrical and magnetic fields.

4304 Storage Rings

4014 (BESSY-TB–166/91) **Superconducting synchrotron radiation sources for industrial application.** Weihreter, E. Berliner Elektronenspeicherring-Gesellschaft fuer Synchrotronstrahlung mbH (BESSY), Berlin (Germany). Aug 1991. 16p. (CONF-910921–: 2. European conference on accelerators in applied research and technology, Frankfurt am Main (Germany), 3-7 Sep 1991). Order Number DE93728690. Source: OSTI; NTIS (US Sales Only); INIS.

X-ray lithography and the LIGA-process are promising examples for the application of synchrotron radiation in the field of industrial mass production of microelectronic and micromechanical devices. In addition, k-edge angiography is a candidate for the use of synchrotron radiation in the field of medical diagnostics. To provide the necessary tools for these applications, compact electron storage

rings are under development at many places worldwide. In this paper the basic concepts of superconducting storage rings are reviewed to point out the technical challenges in this field. The achievements made with the first compact sources are presented. (orig.).

4015 (BONN-ME–92-02) **An investigation of the QBA-optics for the storage ring LISA.** Einfeld, D. (Fachhochschule Ostfriesland, Emden (Germany)); Husmann, D.; Plesko, M. Bonn Univ. (Germany). Physikalisches Inst. Aug 1992. 28p. Order Number DE93728870. Source: OSTI; NTIS (US Sales Only); INIS.

A modified QBA-lattice for the synchrotron light source LISA is proposed. The lattice has matching sections for suppressing the dispersion and two unit cells in between. A unit cell consists of one bending magnet with a focusing quadrupole on each side of it. The novel feature of this lattice is the use of horizontally defocusing bending magnets with different angles to keep the radiation integrals small. The bending angle of the unit cell magnets is twice that of the magnets in the matching sections. For a 60deg achromat with 20deg bending angle per unit cell a 2.5 GeV storage ring yields and emittance of 20 π nm rad. Including long straight sections of 4.6 m the circumference of this machine is 124.8 m. The chromaticities and the sextupole strengths are moderate, the dynamic aperture is large and the momentum acceptance is more than $\pm$9%. (orig.).

4016 (BNL–47904) **Progress in the optoelectronic analog signal transfer for high energy particle detectors.** Tsang, T.; Radeka, V. Brookhaven National Lab., Upton, NY (United States). May 1992. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9205210–4: 2. annual conference on electronics for future colliders, Chestnut Ridge, NY (United States), 19-21 May 1992). Order Number DE93001440. Source: OSTI; NTIS; INIS; GPO Dep.

We report the progress in the development of a radiation hard Optoelectronic analog system to transfer particle detector signals with high accuracy. We will present the motivation of this study, the operating principle of the optoelectronic system, the system noise study, the recent R&D efforts on radiation effect, temperature stability, and the realization of an integrated I x I6 optical modulator. The issue of photon source for driving such a large-scale optoelectronic modulators is a major concern. We will address this problem by examining different possible photon sources and comment on other possible alternative for signal transfer.

4017 (BNL–47955) **Area detectors for neutron protein crystallography.** Schoenborn, B.P. Brookhaven National Lab., Upton, NY (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920792–39: Society of Photo-Optical Instrumentation Engineers (SPIE) international symposium on optical applied science and engineering, San Diego, CA (United States), 19-24 Jul 1992). Order Number DE93001973. Source: OSTI; NTIS; INIS; GPO Dep.

The main problem in neutron protein crystallography is the low flux of present reactor based or pulsed neutron sources. This low flux is however well matched with presently available multiwire area detectors. One way to increase the flux at the sample is to increase the wavelength bandwidth. The conventional technique uses a monochromator with a bandwidth of the order of 1%. This bandwidth can be increased by using a multilayer monochromator composed of different "d" spacings. This provides a large delta lambda increasing the flux manifold. In this case a reflection in diffraction condition is scanned by the wavelength bandwidth and not by rotation of the reciprocal lattice point through the Ewald sphere. In order to collect most of the simultaneous diffraction a large cylindrical area detector covering an angular width of 120° with a height of approximately 20cm is needed. Such a detector should have a spacial resolution of 1.1mm, an efficiency of 80% at 2.0A and a counting rate of one million events per second. This detector will be subdivided into 4 sectors that will be decoded simultaneously into a Motorola based computer system. This data acquisition system allows time slicing and this detector is therefore useful for similar experiments using pulsed neutron sources.

4018 (CONF-9205210–5) **Electronics for the RHIC PHENIX detector.** Young, G.R. Oak Ridge National Lab., TN (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 2. annual conference on electronics for future colliders; Chestnut Ridge, NY (United States); 19-21 May 1992. Order Number DE93002422. Source: OSTI; NTIS; INIS; GPO Dep.

The PHENIX detector for RHIC is being designed to measure lepton pairs, direct photons and hadrons emitted in collisions of heavy nuclei at center of mass energies up to 200 GeV/(nucleon-pair). The physics goal is tests of predictions concerning the existence and nature of a deconfined state of strongly-interacting matter. The relatively large final state multiplicities, which reach 1500 charged particles per unit of rapidity, place strong demands on detector segmentation and control of electronics cost and power consumption. An overview of present ideas concerning signal processing and data rates for PHENIX will be presented.

4019 (CONF-921046–3) **Tools and techniques for evaluation intercomparison.** Hetrick, D.M. Oak Ridge National Lab., TN (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on nuclear data evaluation methodology; Upton, NY (United States); 12-16 Oct 1992. Order Number DE93001643. Source: OSTI; NTIS; INIS; GPO Dep.

A number of computer programs are described that will read the appropriate data format evaluations in ENDF format (V or VI), perform the required calculations, and plot results versus available measured data. These tools are useful in showing weaknesses in evaluations and for uncovering discrepancies. The programs are capable of graphing results for reaction cross sections, differential scattering cross sections, angle- integrated emission spectra, double-differential cross sections of neutron emission, and gamma-ray spectra. Examples are given that illustrate the numerous options presently available.

4020 (CONF-9210194–2) **Monitoring of surface alpha contamination with inexpensive passive monitors.** Gammage, R.B. (Oak Ridge National Lab., TN (United States)); DePriest, J.C.; Wheeler, R.V.; Dempsey, J.C.; Kotrappa, P. Oak Ridge National Lab., TN (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From International symposium on environmental contamination; Budapest (Hungary); 12-16 Oct 1992. Order Number DE93001636. Source: OSTI; NTIS; INIS; GPO Dep.

Field applications are presented in the monitoring of indoor and outdoor surface alpha contamination using passive devices. Both small alpha track and larger electret devices were used. Sensitivity is such that passive measurements made in one to two hours produce 10:1 signal-to-noise readings at a proposed release level of 220 dpm/100 cm^2 (3.7 Bq/cm^2). The small alpha track detectors can be deployed in cracks, under doors, inside narrow pipes and other difficult to access locations where contaminated dirt collects and resists easy removal. Examples are given of the mapping of alpha contamination on floors and metal flanges. Track detectors can also provide spatially resolved information on a fine scale and recognize micron-sized particulate contamination. Soils contaminated with low-level plutonium produce readily measurable voltage drops of 1–5 v/h with 2 g samples containing 5–27 pCi/g, respectively. The electret device has the advantage of allowing readout immediately after exposure using a portable voltmeter. Processing of the exposed plastic track detector requires chemical etching and optical counting to obtain the density of etch tracks but provides a permanent record of an exposure. Both types of devices will find numerous applications in decontamination and decommissioning.

4021 (DOE/ER–0569P) **Report of the DOE Office of Energy Research review committee on the Solenoidal Detector**

Collaboration of the Superconducting Super Collider. USDOE Office of Energy Research, Washington, DC (United States). Office of Superconducting Super Collider. Nov 1992. 185p. Sponsored by USDOE, Washington, DC (United States). Order Number DE93003764. Source: OSTI; NTIS; INIS; GPO Dep.

At the request of Dr. James F. Decker, Deputy Director of DOE's Office of Energy Research, a technical review committee was assembled to perform a peer review of the Solenoidal Detector Collaboration (SDC) from October 26 to October 30, 1992, at the Superconducting Super Collider Laboratory (SSCL). The Energy Research Review Committee (ERC) evaluated the technical feasibility, the estimated cost, the proposed construction schedule, and the management arrangements for the SDC detector as documented in the SDC Technical Design Report, SDC Project Cost/Schedule Summary Book, SDC draft Project Management Plan, and other materials prepared for and presented to the Committee by the SDC management. The SDC detector is one of two major detector facilities anticipated at the SSC. The SDC project will be carried out by a worldwide collaboration of almost 1000 scientists, engineers, and managers from over 100 universities, national laboratories, and industries. The SDC will construct a state-of-the-art, general-purpose detector weighing over 26,000 tons and the size of an eight-story building, to perform a broad class of high energy physics experiments at the SSC beginning in the fall of 1999. The design of the SSC detector emphasizes tracking in a strong solenoidal magnetic field to measure charged-particle momenta and to assist in providing good electron and muon identification; identification of neutrinos and other penetrating particles using a hermetic calorimeter; studies of jets of hadrons using both calorimeter and tracking systems; and studies of short-lived particles, such as B mesons, and pattern recognition within complex events using a silicon-based vertex tracking system. These capabilities are the result of the intensive research, development, and design activities undertaken since 1989 by this very large and capable collaboration.

4022 (DOE/ER/05030–T1) **[Elementary particles]: Final technical report.** Rutgers–the State Univ., New Brunswick, NJ (United States). [1983]. 10p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract AS05-78ER05030. Order Number DE93004034. Source: OSTI; NTIS; GPO Dep.

During the period from September 1, 1982 to August 31, 1984, funds totaling $159,414 are requested for analysis of E515 data and continued development of high resolution detectors required in an anticipated beauty experiment. In the Fermilab experiment E515 we have recorded 60,000 pictures with the scintillation camera and hope to reconstruct perhaps 100 charmed particles. We are continuing to develop the MCP vertex detector and are considering several variations of the scintillation camera technique. Two other novel detectors with prospects for high resolving power are currently under development.

4023 (DOE/ER/40310–T2) **Photon detector for MEGA: Progress report, July 16, 1991–May 31, 1992.** Gagliardi, C.A.; Tribble, R.E. Texas A and M Univ., College Station, TX (United States). [1992]. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-87ER40310. Order Number DE93004366. Source: OSTI; NTIS; INIS; GPO Dep.

The MEGA photon detector is designed to observe the 52.83-MeV photon produced in a $\mu \rightarrow e\gamma$ decay with an energy resolution of 1.25 MeV, a position resolution of 2×5 mm^2, a directional resolution of 10°, a time resolution of 500 ps, and an efficiency of about 5.4%. It will consist of three independent concentric cylindrical pair spectrometers mounted within a 1.5 T magnetic field produced by a superconducting solenoid magnet. Each pair spectrometer includes two thin Pb foils to convert photons into e^+e^- pairs. The two smaller pair spectrometers will have three drift chamber layers to track the e^+e^- pairs and thereby determine both their locations and their vector momenta. The third pair spectrometer will have four layers of drift chamber, together with a larger turning region, to provide better tracking information for high energy photons. The inner drift chamber layer in each of the spectrometers includes a delay line cathode to determine the z coordinates needed for track reconstruction. An MWPC located between the two Pb layers identifies the conversion layer so that energy loss corrections may be applied, while plastic scintillators provide timing information. During the past year, efforts have focused primarily on software development, completion of the delay line tests, and development of electronics for the scintillators and delay line read-out. Optical windows were glued onto the light guides required for the third pair spectrometer. In addition, major contributions were made to the development of a proposal to measure the Michel parameter, ρ, using the MEGA positron detectors.

4024 (DOE/ER/40323–T6) **[Medium energy meson research].** Crowe, K.M. California Univ., Berkeley, CA (United States). Dept. of Physics. [1992]. 62p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-87ER40323. Order Number DE93004133. Source: OSTI; NTIS; INIS; GPO Dep.

The activities of this group are primarily concerned with experiments using the Crystal Barrel Detector. This detector is installed and operating at the Low Energy Antiproton Ring (LEAR) at CERN. QCD, the modern theory of the strong interaction, is reasonably well understood at high energies, but unfortunately, low-energy QCD is still not well understood, and is far from being adequately tested. The Crystal Barrel experiments are designed to provide some of the tests. The basic line of research involves meson spectroscopy, analyses bearing on the quark and/or gluon content of nuclear states, and the exploration of mechanisms and rules which govern $p\bar{p}$ annihilation dynamics. The Crystal Barrel Detector detects and identifies charged and neutral particles with a geometric acceptance close to 100%. The principal component of the detector is an array of 1,380 CsI(Tl) crystals. These crystals surround a Jet Drift Chamber (JDC), located in a 1.5 Tesla magnetic field, which measures the momentum and dE/dx of charged particles. One of the very interesting physics goals of the detector is a search for exotic mesonic states – glueballs and hybrids. Annihilation at rest will be studied with both liquid and gaseous hydrogen targets. The gaseous target offers the possibility of triggering on atomic L-shell X rays so that specific initial angular momentum states can be studied.These topics as well as other related topics are discussed in this report.

4025 (DOE/ER/40544–1) **Workshop on major SSC detectors.** Arizona Univ., Tucson, AZ (United States). 1990. 702p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER40544. (CONF-900243–: Workshop on major SSC detectors, Tucson, AZ (United States), 18-23 Feb 1990). Order Number DE93002733. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains notes generated during the workshop.

4026 (DOE/ER/40615–2) **Experimental particle physics: Progress report, September 16, 1991–September 30, 1992.** Steinberg, R.I.; Lane, C.E. Drexel Univ., Philadelphia, PA (United States). Dept. of Physics. Sep 1992. 53p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40615. Order Number DE93003884. Source: OSTI; NTIS; INIS; GPO Dep.

The goals of this research are the experimental testing of fundamental theories of physics beyond the standard model and the exploration of cosmic phenomena through the techniques of particle physics. We are working on the MACRO experiment, which employs a large-area underground detector to search fore grand unification magnetic monopoles and dark matter candidates and to study cosmic ray muons as well as low- and high-energy neutrinos; the Chooz experiment to search for reactor neutrino oscillations at a distance of 1 km from the source; a new proposal (the Perry experiment) to construct a one-kiloton liquid scintillator in the Fairport, Ohio underground facility IMB to study neutrino oscillations with a 13 km baseline; and development of technology for improved liquid scintillators and for very-low-background materials in support of the MACRO and Perry experiments and for new solar neutrino experiments.

4027 (DOE/ER/40653–1) **Development of a scintillating fiber tracker for the SSC: Final technical report, July 1, 1991–June 30, 1992.** Lewis, R.A. Pennsylvania State Univ., University Park, PA (United States). Oct 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40653. Order Number DE93003900. Source: OSTI; NTIS; INIS; GPO Dep.

The Fiber Tracking Group (FTG) of the Solenoidal Detector Collaboration (SDC) is developing a high rate tracking subsystem appropriate for the SDC detector based on scintillating fiber (SciFi) technology. In the past two years a major upgrade in the design was conceived, which reduces the material and cost of the tracker and improves the effectiveness of the tracking system as a trigger element. The results of simulations of the performance of the tracker at Penn State have been very important in keeping the SciFi technology as an attractive option for a tracking system for the SDC collaboration. In the past year an array of scintillating fiber elements has been evaluated in a test beam at Brookhaven. Past experience of Penn State personnel at Brookhaven proved valuable in making the test beam runs a success.

4028 (IAE–2091/R-5/D/A) **Photon interaction probability in a liquid scintillator.** Pochwalski, K. Institute of Atomic Energy, Otwock-Swierk (Poland). Feb 1990. 19p. Order Number DE93607923. Source: OSTI; NTIS (US Sales Only); INIS.

The probability of interaction of 1 keV to 5 MeV photons with a liquid scintillator (toluene/triton X-100/water) of a volume of 0.6 ml in glass vials and 5.3 ml in plastic vials, is presented. The results are shown in the digital and graphical form. (author).

4029 (IAE–2105/OBRI/I/A) **Measurement of ^{125}I K x and 35.5 keV photon emission probabilities.** Kempisty, T. Institute of Atomic Energy, Otwock-Swierk (Poland). Nov 1990. 13p. Order Number DE93607845. Source: OSTI; NTIS (US Sales Only); INIS.

The K x ray and 35.5 keV gamma-ray emission probabilities of ^{125}I has been determined. The photon spectra were measured with HP-Ge detector. The activity of ^{125}I sources were measured by means of x-x, γ coincidence method using of fast-slow coincidence spectrometer. (author).

4030 (INIS-BR–2970) **Tracer technique for measuring specific activity of ^{63} Ni, using $4\pi\beta$-γ.** Iwahara, A. Instituto Militar de Engenharia (IME), Rio de Janeiro, RJ (Brazil). 1979 127p. (In Portuguese). Order Number DE93607924. Source: OSTI; NTIS (US Sales Only); INIS.

The specific activity of a ^{63} Ni solution has been measured by an efficiency tracer technique using a 4 π β - γ coincidence system. ^{63} Ni was chosen. Because it's a very low energy pure beta emitter. Due to chemical compatibility and beta spectral shapes, ^{60} Co has been chosen as tracer. In the determination of ^{63} Ni, the specific activity. As the efficiency tracer techniques requires a previous knowledge of tracer activity, this has been measured by a conventional 4 π β -γ coincidence method. (author).

4031 (INIS-BR–3005) **Construction, calibration and test of an ionization chamber for exposure measurement of x and gamma radiation in region from 40 keV to 1250 keV.** Campos, C.A.A.L. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1982 162p. (In Portuguese). Order Number DE93607925. Source: OSTI; NTIS (US Sales Only); INIS.

An unsealed thimble ionization chamber with connecting cable was designed, manufactured and tested at the IRD=CNEN, for exposure or exposure rate measurement of X or gamma rays in the energy range from 40 KeV up to Cobalt-60. Recommendations given by IEC, TC-62 (1974) were used as acceptance tests of the ionization chamber for use as a tertiary standard (field class instruments) in radiation therapy. In addition, intercomparison with commercially available chambers of reference class type were carried out in respect to field size dependence, energy dependence, short and long term stability. The results of those tests indicated the usefulness of the developed ionization chamber as a tertiary standard. (author).

4032 (INIS-BR–3019) **Practical use of LIF-Nuclemon as a thermoluminescent dosemeter of γ, χ and β radiations.** Marilac Pereira Dolabela, L. de. Minas Gerais Univ., Belo Horizonte, MG (Brazil). Inst. de Ciencias Exatas. 1987 260p. (In Portuguese). Order Number DE93607834. Source: OSTI; NTIS (US Sales Only); INIS.

The practical use of doped LiF Nuclemon with magnesium (LiF:Mg) as a thermoluminescent dosimeter of γ, X and β radiations is studied. The TL properties of LiF:Mg were analysed to γ energy of 1,25 MeV; 30, 50 and 70 KeV. (author).

4033 (INIS-BR–3045) **Thermoluminescence of LIF: Mg, Ti between 77 and 315 K.** Rosa, L.A.R. da. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. 1989 168p. (In Portuguese). Order Number DE93607835. Source: OSTI; NTIS (US Sales Only); INIS.

A special thermoluminescent system was developed. It is able to operate right from liquid nitrogen temperature and also permits the determination of the sample thermoluminescent emission spectrum. Using this system, the thermoluminescence displayed by 77 K irradiated LiF:Mg,Ti (TLD-100), from the irradiation temperature to 315 K, was studied. In this temperature range seven glow peaks, at 139, 153, 194, 240, 260, 283 and 300 K, were determined. (author).

4034 (INIS-mf–13375, pp. 16) **Thermal neutron scattering spectrometer for the dynamical properties investigations of crystal substances at TRC.** Majdob, M.M.; Shihub, S.I. 4035 (KAERI/RR–1061/91) **The development of application technology for image processing in nuclear facilities.** Lee, Jong Min (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Lee, Yong Bum; Kim, Woong Ki; Kim, Seung Ho; Kim, Chang Hoe; Kim, Byung Soo; Sohn, Surg Won; Hwang, Suk Yeoung. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jan 1992. 120p. (In Korean). Order Number DE93605838. Source: OSTI; NTIS (US Sales Only); INIS.

In this study, first, the prototype of the radiation level monitoring system as well as the monitoring algorithms is developed. Secondly, the pattern recognition algorithms are developed for robot vision. As the results of the experiments, the radiation level distribution is surveyed through two dimensional data acquired by the prototype. Also, the number images and bolt images are accurately recognized by the pattern recognition algorithms. It is expected that not only radiation level monitoring system but the pattern recognition algorithms will be adopted to development of the nuclear intelligent robot in the process of being performed in this laboratory. (Author).

4036 (KFK–4999) **New evaluation methods for plutonium assay by passive neutron interrogation of barrels with heavy and heterogeneous waste.** Eyrich, W. (Kernforschungszentrum Karlsruhe GmbH (Germany)); Klotz, W.D.; Simon, G.G. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Neutronenphysik und Reaktortechnik; Kernforschungszentrum Karlsruhe GmbH (Germany). Hauptabteilung Ingenieurtechnik; Kernforschungszentrum Karlsruhe GmbH (Germany). Koordinationsstelle Internationale Forschung zur Nuklearen Entsorgung (KNE). Mar 1992. 50p. (In German). (PWA–39/91). Order Number DE93728905. Source: OSTI; NTIS (US Sales Only); INIS.

To detect minute quantities of plutonium in 220 liter drums, a new method and a data analysis system were developed, the LCA (local correlation analysis system). With this, it is possible to determine the exact probe location. It has the ability to distinguish between a homogeneous Pu-distribution and a Pu-probe in the center of the container. Within each neutron signal, the time of pulse and the counter number are registered, therefore analysis methods currently in practice can utilize. For drums having a higher plutonium content the detection efficiency can be determined directly without knowledge of the matrix composition or the probe location. The data analysis system is tailored to be used with an ordinary PC. (orig.).

4037 (LA–12451-MS) **Statistical data filtration in neutron coincidence counting.** Beddingfield, D.H.; Menlove, H.O. Los Alamos National Lab., NM (United States). Nov 1992. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93001907. Source: OSTI; NTIS; INIS; GPO Dep.

We assessed the effectiveness of statistical data filtration to minimize the contribution of matrix materials in 200-ℓ drums to the nondestructive assay of plutonium. Those matrices were examined: polyethylene, concrete, aluminum, iron, cadmium, and lead. Statistical filtration of neutron coincidence data improved the low-end sensitivity of coincidence counters. Spurious data arising from electrical noise, matrix spallation, and geometric effects were smoothed in a predictable fashion by the statistical filter. The filter effectively lowers the minimum detectable mass limit that can be achieved for plutonium assay using passive neutron coincidence counting.

4038 (NUREG/CR–5868) **Development of position sensitive proportional counters for hot particle detection in laundry and portal monitors.** Shonka, J.J. (Shonka Research Associates, Inc., Marietta, GA (United States)); Schwahn, S.O.; Bennett, T.E.; Misko, D.J. Nuclear Regulatory Commission, Washington, DC (United States). Div. of Regulatory Applications; Shonka Research Associates, Inc., Marietta, GA (United States). Sep 1992. 28p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). (SRA–9201). Source: OSTI; NTIS; INIS; GPO.

This report summarizes research which demonstrates the use of position sensitive proportional counters in contamination monitoring systems. Both laundry monitoring and portal monitoring systems were developed. The laundry monitor was deployed at a nuclear power plant where it was used to monitor clothing during an outage. Position sensitive proportional counter based contamination monitoring systems were shown to have significant advantages over systems using conventional proportional counters. These advantages include the ability to directly measure the area and quantity of contamination. This capability permits identification of hot particles. These systems are also capable of self calibration via internal check sources. Systems deployed with this technology should benefit from reduced complexity, cost and maintenance. The inherent reduction of background that occurs when the counter is electronically divided into numerous detectors permits operation in high background radiation fields and improves detection limits over conventional technology.

4039 (SINS–2121/P-6/PH/A) **Analysis of systematic uncertainties in the study of anomalous behaviour of Z-2 nuclear fragments.** Bano, M. (Slovenska Akademia Vied, Kosice (Czechoslovakia). Ustav Experimentalnej Fyziky); Kravcikova, M.; Glagolev, V.V. Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland). Aug 1991. 7p. Order Number DE93607874. Source: OSTI; NTIS (US Sales Only); INIS.

Report received in March 1992.

The study of possible systematic uncertainties in the evaluation of cross sections of secondary helium nuclei in the hydrogen bubble chamber is presented. It is shown that corrections are negligible. (author).

4040 (SSCL–598) **Test results on current-splitter Version 2 chip.** Yang, W.; Dorenbosch, J.; Kibuule, P. Superconducting Super Collider Lab., Dallas, TX (United States). Oct 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. Order Number DE93003330. Source: OSTI; NTIS; INIS; GPO Dep.

We report test results for the second version of the current-splitter chip for the Photo Multiplier Tube (PMT) digital readout system. The chip was designed by Fermilab and fabricated using the Orbit 2 micron BiCMOS process. Version 2 of the splitter has 10 splitting ranges compared to 9 in the previous design. Measurements were done to test the performance of the current-splitter chip at the Physics Research Division, Superconducting Super Collider Laboratory (SSCL).

4041 (SSCL-Preprint–153) **VXIbus Beam Position Monitor module.** Jones, A.A. Superconducting Super Collider Lab., Dallas, TX (United States). Oct 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. Order Number DE93001674. Source: OSTI; NTIS; INIS; GPO Dep.

This is a description of a VXIbus Register Based Beam Position Monitor module. This module consists of a sealed analog module that outputs the sum and difference of the log signals for both the X and Y axis of the Beam Position Monitor (BPM). These signals are then digitized by 12-bit analog-to-digital converters. These digitized values are then stored in memory. A selectable number of these digitized values can also be averaged and stored. This will be particularly useful when close orbit information is required.

4042 (SSCL-Preprint–155) **Cosmic ray test of SDC prototype muon drift tubes.** Fukui, T. (Superconducting Super Collider Lab., Dallas, TX (United States)); Lubatti, H.J.; Thunborg, J.; Daly, C.; Davisson, R.; Davisson, W.; Dougherty, W.; Guldenmann, H.; Hersch, J.; Paulson, K.; Zhao, T. Superconducting Super Collider Lab., Dallas, TX (United States). Jun 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. (CONF-9206222–3: International conference on advanced technology and particle physics, Como (Italy), 22-26 Jun 1992). Order Number DE93001680. Source: OSTI; NTIS; INIS; GPO Dep.

Preliminary results are presented from cosmic ray tests of the SDC muon detector prototype module. The module consists of 30 drift cells. Each drift cell is a 9m long, 73mm inner diameter aluminum tube with simple field shaping electrodes. The anode wire is gold plated tungsten. The construction of the module makes use of the drift tubes as structural elements. The resolution and efficiency are approximately 200μm and 99%, respectively.

4043 (UCRL-JC–110349) **A working method for treating variations in counting efficiency.** Gunnink, R. Lawrence Livermore National Lab., CA (United States). 1 Sep 1992. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9209233–1: International k_0 users workshop, Gent (Belgium), 30 Sep - 2 oct 1992). Order Number DE93000515. Source: OSTI; NTIS; GPO Dep.

A practical model is described that accurately determines gamma-ray detection efficiencies of germanium detectors as functions of known or measurable parameters, such as the gamma-ray energy, source-to-detector distance, detector dimensions, absorbing materials, and source characteristics (dimensions, weight, and composition). Equations and algorithms based on this model have been written into computer routines to make run-time calculations for detection efficiencies that account for changes in these parameters. A code called EFFIC win be used during the workshop to demonstrate our model.

4402 Radiation Effects On Instrument Components, Instruments, Or Electronic Systems

4044 (DESY–92-060) **Radiation hardness of silicon detectors for future colliders.** Fretwurst, E. (Hamburg Univ. (Germany). 1. Inst. fuer Experimentalphysik); Claussen, N.; Croitoru, N.; Lindstroem, G.; Papendick, B.; Pein, U.; Schatz, H.; Schulz, T.; Wunstorf, R. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Apr 1992. 24p. Contract BMFT 055HH19I. (CONF-9202140–: 6. European symposium on semiconductor detectors: New developments on radiation detectors, Milan (Italy), 24-26 Feb 1992). Order Number DE93728830. Source: OSTI; NTIS (US Sales Only); INIS.

The radiation hardness of silicon pad detectors, especially developed for the PLUG-Calorimeter of the H1 Experiment at HERA was investigated with respect to neutron and electron irradiation. Be(d,n)-neutrons with an average energy of 6.2MeV up to a fluence of 10^{15}n/cm^2 and 1.8MeV electrons up to a dose of 1MGy (10^{16}e/cm^2) were used. Degradation effects of the diode properties regarding the reverse current, depletion voltage and charge collection efficiency are studied at room temperature and with no bias applied during irradiation. Special emphasis is put on the separation of the respective damage generation and its subsequent self annealing. The observed effects are discussed with respect to radiation levels to be envisioned for experiments with future colliding beam machines. (orig.).

4045 **Ringlight for use in high radiation.** Baylor, G.A.; Jacket, H.S. To Dept. of Energy. 6 Mar 1991. USAA patent application 7-665,11. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC11-89PN38014. Order Number DE93002016. Source: OSTI; NTIS; GPO Dep.

The present invention relates generally to ringlight for providing illumination about a central viewing area and more particularly to an improved ringlight design suitable for use in automatic gaging applications conducted in hostile radioactive environments. It is a further object of the present invention to provide a ringlight which is relatively simple in construction and with few parts, and which is thus very reliable in operation. The above and other objects are achieved in the present invention by a ringlight providing an annular array of light-emitting elements centered about a viewing passage, wherein the improvement comprises: a first annular body, a second annular body mounted concentrically within the first annular body so as to form an annular void and light-emitting aperture therebetween, and a plurality of optical fibers extending into the void with end portions thereof secured therein so as to form an annular array of optical fiber end surfaces at said light-emitting aperture, the first and second bodies cooperating to angle the end portions of the plurality of optical fibers toward a central axis of the viewing passage.

4046 (UCRL-JC–111211) **Transient radiation effects in annealed proton exchange $LiNbO_3$ and $LiTaO_3$ waveguides.** Smith, D.E.; Hugenberg, K.F.; Flatley, J.E.; Garrett, H.E. Lawrence Livermore National Lab., CA (United States). 3 Sep 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9209184–5: The International Society for Optical Engineering (SPIE) meeting, Boston, MA (United States), 8-11 Sep 1992). Order Number DE93001621. Source: OSTI; NTIS; GPO Dep.

We have measured optical attenuation in $LiNbO_3$ and $LiTaO_3$ waveguides due to exposure to a ~3 ns pulse of ~400 KeV electrons. The $LiNbO_3$ operated at 810 nm and the $LiTaO_3$ at 1309 nm. Both waveguides were formed using the annealed proton exchange method. Transient attenuation and recovery was observed for a series of pulse doses. To the accuracy of the measurements, total recovery was observed within 1 sec after exposure for both waveguides. Results from these waveguides were compared to earlier measurements of a titanium-indiffused $LiNbO_3$ waveguide.

4047 (UM-P–92/45) **Neutron damage of silicon detectors at 20 deg C.** Bardos, R.; Gorfine, G.; Guy, L.; Moorhead, G.; Taylor, G.; Tovey, S. Melbourne Univ., Parkville (Australia). School of Physics. 27 Jun 1992. 20p. (SITP-NOTE–037.). Order Number DE93607941. Source: OSTI; NTIS (US Sales Only); INIS.

This contribution reports new data on the damage of silicon detectors by low energy (1 MeV) neutrons. The data were taken at the end of 1991. Three exposures of UA2 Inner Silicon detectors were made: at +20 deg C, -15 deg C and -95 deg C. A high neutron flux enabled the required fluences to be achieved in relatively short times. This increases the sensitivity of the experiment to damage types with shorter self-annealing time constants. This note discusses the new data taken at +20 deg C. Analysis of the low temperature exposures is in progress. 5 refs., 15 figs.

4048 (VTT-TIED–1203) **Total dose tests for the PROMICS-3 instrument.** Verkasalo, R. (Technical Research Centre of Finland, Espoo (Finland). Computer Technology Lab.). Technical Research Centre of Finland, Espoo (Finland). Jan 1991. 40p. Order Number DE93605912. Source: OSTI; NTIS; INIS.

The sensitivity of some analog and digital integrated circuits (IC's) to ionizing radiation was tested in order to evaluate their potential usefulness especially in the PROMICS-3 instrument. The PROMICS-3 is a plasma instrument to be flown on the Russian Interball satellites. The radiation tolerance requirement of the auroral Interball satellite is about 45 krad/year inside a shielding of 4 mm Aluminium. The IC's tested were: AD571 A/D- converter, AD-DAC80 D/A-converter, LF442A and PM108A operational amplifiers, MPREF0l voltage reference, STC SPXO 6 MHZ oscillator,4N55 optocoupler, MC5IC98 and CY7C164 16k*4 static CMOS RAM. Co-60 was used as the irradiation source. The test methods and results are described in the paper. The RAM-circuits failed between 10 and 20 krad. D/A- and A/D-converters degraded only slightly after 100 krad, but one of the A/D-converters failed functionally at 190 krad. The LF442A began to degrade in the test connection at 100 krad, and PM108A at 30 krad. The output voltage of the voltage reference MPREF01 increased about 20 mV after 100 krad. No change was observed in the output frequency of the STC SPXD oscillator even after 300 krad. The current tansfer ratio of the 4N55 decreased continuously to about 75 % of the initial value after 100 krad.

4049 **Gold ink coating of thermocouple sheaths.** Ruhl, H.K. To Dept. of Energy. 4 Mar 1991. USAA patent application 7-663,51. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC12-76SN00052. Order Number DE93002009. Source: OSTI; NTIS; GPO Dep.

A method is provided for applying a gold ink coating to a thermocouple sheath which includes the steps of electropolishing and oxidizing he surface of the thermoouple sheath into liquid gold ink, and finally heat curing the coating. The gold coating applied in this manner is highly reflective and does not degrade when used for an extended period of time in an environment having a temperature over 1000°F. Depending on the application, a portion of the gold coating covering the tip of the thermocouple sheath is removed by abrasion.

4050 (DOE/ER/13949–4) **Molecular aspects of transport in thin films of controlled architecture: Technical summary, July 1, 1991–June 30, 1992.** Illinois Univ., Urbana, IL (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER13949. Order Number DE93003886. Source: OSTI; NTIS; GPO Dep.

Work was done in two principal areas: characterization of diffusion in swollen polymer films both with and without a barrier layer, and initial investigations of molecular aspects of swelling using enhanced Raman spectroscopy.

4051 **Optical transcutaneous bilirubin detector.** Kronberg, J.W. To Dept. of Energy. 4 Mar 1991. USAA patent application 7-663,51. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93002008. Source: OSTI; NTIS; GPO Dep.

This invention consists of a transcutaneous bilirubin detector comprising a source of light having spectral components absorbable and not absorbable by bilirubin, a handle assembly, electronic circuitry and a fiber optic bundle connecting the assembly to the light source and circuitry. Inside the assembly is a prism that receives the light from one end of the fiber optic bundle and directs it onto the skin and directs the reflected light back into the bundle. The other end of the bundle is trifucated, with one end going to the light source and the other two ends going to circuitry that determines how much light of each kind has been reflected. A relatively greater amount absorbed by the skin from the portion of the spectrum absorbable by bilirubin may indicate the presence of the illness. Preferably, two measurements are made, one on the kneecap and one on the forehead, and compared to determine the presence of bilirubin. To reduce the impact of light absorption by hemoglobin in the blood carried by the skin, pressure is applied with a plunger and spring in the handle assembly, the pressure limited by points of a button slidably carried in the assembly that are perceived by touch when the pressure applied is sufficient.

4052 **Precision surface machining.** Lazazzera, V.J.; Schmell, R.A. To Dept. of Energy. 6 Mar 1991. USAA patent application 7-665,06. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93002015. Source: OSTI; NTIS; GPO Dep.

Precision finishing apparatus utilizing line contact polishing to produce optical quality parts. A rotatable cylinder is horizontally disposed above a workpiece which is mounted on a rotatable, and

horizontally and vertically adjustable chuck. Predetermined surfaces can be cut into the surface of the cylinder to produce figures of revolution, such as aspheres,, when the workpiece is being rotated.

4053 (PNL–8352) **A comparison of surface topography characterization technologies for use in comparing spent bullet and cartridge case signatures.** Batishko, C.R.; Hickman, B.J.; Cuta, F.M. Pacific Northwest Lab., Richland, WA (United States). Nov 1992. 71p. Sponsored by Department of State, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93002976. Source: OSTI; NTIS; GPO Dep.

The Pacific Northwest Laboratory was tasked by the US Department of Energy to provide technical assistance to the Federal Bureau of Investigation in evaluating and ranking technologies potentially useful in high-speed comparison of unique spent bullet and cartridge case surface signatures. Information sources included vendor input, current relevant literature, vendor phone contacts, other FBI resources, relevant PNL reports, and personal contact with numerous PNL technical staff. A comprehensive list of technologies was reduced to a list of 38 by grouping very similar methodologies, and further reduced to a short list of six by applying a set of five minimum functional requirements. A total of 14 primary criteria, many having secondary criteria, were subsequently used to evaluate each technology. The ranked short list results are reported and supported in this document, and their scores normalized to a hypothetical ideal system are as follows: (1) confocal microscopy 82.13; (2) laser dynamic focusing 72.04; (3)moire interferometry V70.94; (4)fringe field capacitance;(5)laser triangulation 66.18; (6)structured/sectioned light 65.55. Information available within the time/budget constraints which was used for the evaluation and ranking was not sufficiently detailed to evaluate specific implementations of the technologies. Each of the technologies in the short list was judged potentially capable of meeting the minimum requirements. Clever, novel engineering solutions resulting in a more cost-effective system, or a closer fit to the "ideal system," could result in a reordering of the short list when actual technical proposals are evaluated. Therefore, it is recommended that a Request for Proposal not be limited to only the highest ranked technology, but include all six technologies in the short list.

4407 Geophysical and Meteorological Instrumentation

4054 (GKSS–92/E/11) **Comparison of measurements of temperature and heat flux with a sonic-anemometer-thermometer and a fast platinum-wire-sensor.** Behrendt, M. (GKSS, Inst. fuer Physik, Geesthacht (Germany)). GKSS-Forschungszentrum Geesthacht GmbH, Geesthacht-Tesperhude (Germany); Fachhochschule Hamburg (Germany). Fachbereich Produktions- und Verfahrenstechnik. 1992. 115p. (In German). Order Number DE93728986. Source: OSTI; NTIS (US Sales Only).

In this study high resolution temperature data from the atmospheric surface layer has been analysed. These data were obtained by a Sonic-anemometer-thermometer and a fast platinum-wire-sensor. Turbulence measurements gathered during two field experiments have been analysed by means of statistical methods in order to characterize the time response of the temperature sensor. In case of the Sonic, power spectra, calculated using the Fast Fourier Transformation (FFT), did not show the theoretically expected spectral behaviour in the high frequency rance. The spectral curves were found to depend on the wind speed and direction, whereas spectra for the fast-temperature-sensor showed the expected spectral slopes. The comparison of 2nd order moments for the two sensors revealed an attenuation of the signal of the fast-temperature-sensor. (orig.) With 65 figs., 10 tabs.

4055 **Self balancing measuring probe enclosure and method for waterproofing same.** Fodor, G.; Nilsen, R.J. To Dept. of Energy. 13 Feb 1991. USAA patent application 7-654,46. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC11-76PN00014 ;AC11-89PN38014. Order Number DE93001999. Source: OSTI; NTIS; GPO Dep.

Waterproofing standard linear position measuring transducers often requires a sacrifice in measuring accuracy when the transducer must be used at varying water depths. To obviate this disadvantage, the disclosed waterproofing structure is constructed such that increasing or decreasing forces applied to the transducer as its depth in the water changes will not apply unbalanced forces to the transducer thereby causing false readings. Similarly, the nominal gauging force developed by the instrument is unaffected by varying water depths.

This document, Volume III, contains appendices E-F of the report on the Special Operations Forces Planning and Rehearsal Systems program. Appendix E concerns mission analysis. A description of the prototype mission analysis module and observations and user feedback are included. Appendix F concerns intelligence. For this, command relationships, the role of intelligence in the targeting and mission planning process, sources of intelligence information, flow of intelligence, security considerations, joint targeting and mission planning, data accessibility, and data prioritization are included.

4058 (ANL/EAIS/TM–70-Vol.4) **Summary of requirements collected and prototype systems developed by Argonne National Laboratory in support of the SOFPARS program: Volume 4, Appendixes G–N.** Peerenboom, J.P.; Baines, T.B.; Braun, M.D.; Cortese, D.L.; Crowe, C.M.; Fuja, R.S.; Greene, R.J.; Gregor, R.A.; Kavicky, J.A.; Love, R.J.; Macal, C.M.; Nevins, M.R.; Paddock, R.A.; Ramsey, G.M.; Roberson, C.F.; Robinson, G.L.; St. Aubin, J.A.; Sapinski, PArgonne National Lab., IL (United States). Environmental Assessment and Information Sciences Div. May 1992. 386p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE93000393. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This document, Volume IV, contains appendices G-N of the Special Operations Forces Planning and Rehearsal Systems (SOFPARS) program. Appendix G contains briefback support. Appendix H concerns the application of artificial intelligence to SOFPARS. Appendix I discusses the application interface engine. Appendix J contains information management and data sources. Appendix K presents legal analysis as far as international law is concerned. Appendix L contains a SOFPARS survey form. Appendix M contains relevant acronyms. Appendix N is an annotated bibliography.

4059 (LA–12389-MS) **A continuum code investigation of stress integration using exact and approximate material rotation.** Davidson, R.F.; Maudlin, P.J. Los Alamos National Lab., NM (United States). Nov 1992. 28p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93001892. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The accuracy of the Zaremba-Jaumann-Noll stress rate (referred to here as the Jaumann Stress Rate) used in various continuum mechanics codes is investigated using two realistic warhead formation problems that involve isotropic plasticity, large deformations, and large rigid body rotation. It has been demonstrated in the literature for simple problems that, although the Jaumann Stress Rate is objective (i.e., under superimposed rigid body rotation, it transforms in like manner as the stress or strain rate), it is not kinematically consistent because it uses the anti-symmetric part of the velocity gradient tensor to approximate rigid body rotation. A theoretically correct approach would use an objective stress rate that is kinematically consistent via the use of the exact rigid body rotation rate. It is shown in this work that, although the Jaumann Stress Rate is sufficiently accurate for gross deformation, inspection of the stress-strain details show kinetical errors. The computational expense of using an exact rotation rate is shown to be insignificant.

4060 (SAND–88-2958-Rev.) **Standard Annunciator software overview.** Anspach, D.A. (Sandia National Labs., Albuquerque, NM (United States)); Fox, E.T.; Kissock, P.S. Sandia National Labs., Albuquerque, NM (United States). Oct 1992. 186p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93004025. Source: OSTI; NTIS; GPO Dep.

The Standard Annunciator Software is responsible for controlling the AN/GSS-41 and AN/GSS-44 Annunciator Systems. The software interfaces with other systems-ACS, ECS, CCTV, UPS-to determine current alarm, tamper, and hardware status. Current system status conditions are displayed at the operator's console and on display maps. This manual describes the organization and functionality of the software as well as the generation mechanisms for development and target environments.

4061 (SAND–92-0667C) **System development of a 120 mm tandem-rod kinetic energy projectile.** Luk, V.K.; Hickerson, J.; Hodapp, A.E.; Foster, A.D. Sandia National Labs., Albuquerque, NM (United States). 1 Oct 1992. 15p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9210205–1: 2. ballistics symposium on classified topics, Baltimore, MD (United States), 26-29 Oct 1992). Order Number DE93002307. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Preliminary system design and testing has been done for a prototype tank-fired projectile consisting of two tethered kinetic energy penetrators flying in tandem. The projectile has principal application against reactive armor, but also exhibits potential against ceramic armors and conventional armor. The projectile is designed to be launched by the current M829 cartridge and propellant from a standard 120 mm smooth-bore cannon. This paper discusses the design principals, configuration, terminal ballistics of scale model penetrators, and the results of preliminary gun tests conducted at full scale. Similar concepts are discussed and compared with the Sandia design.

4062 (CONF-890398–, pp. 69-74) **Near-source observations of quarry explosions.** Johnson, L.R. (Lawrence Berkeley Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

Seismic waveform data have been recorded from a series of chemical explosions in the Kaiser Permanente Quarry near Menlo Park, California. The explosions were arranged by Dr. Willie Lee of the US Geological Survey. The University of California's part of the experiment was to record broadband waveform data at a network of stations surrounding the sources. The recording experiment at the quarry was very similar to experiments performed in the past for nuclear explosions at the Nevada Test Site, with all distances and depths scaled down by a factor of about 10 for the quarry experiment. Ten different explosive events were recorded, including single explosions at various depths in drilled holes, regular quarry blasts consisting of simultaneous explosions in clusters of shallow drilled holes, and one event consisting of the combination of a quarry blast and a single explosion in a drilled hole with both fired at about the same time. Analysis of the data collected in this experiment has just begun, and the initial analysis has concentrated on examining the effects of source depth upon the waveforms. As information about the velocity structure in the quarry is developed, it should also be possible to perform moment tensor inversions and thus obtain direct estimates of the source functions.

4063 (LA-UR–92-2915) **Understanding curved detonation waves.** Bukiet, B.G. (New Jersey Inst. of Tech., Newark, NJ (United States). Dept. of Mathematics); Menikoff, R. Los Alamos National Lab., NM (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9207159–1: 10. detonation symposium, Boston, MA (United States), Jul 1992). Order Number DE93000799. Source: OSTI; NTIS; GPO Dep.

A wave curve is the set of final states to which an initial state may be connected by a traveling wave. In gas dynamics, for example, the wave curve consists of the shock Hugoniot curve for compressive waves and the rarefaction curve for expansive waves. In this paper, we discuss the wave curve for an undriven planar detonation and for general planar detonations. We then extend the wave curve concept to detonations in converging and diverging geometry. We also discuss the application of these wave curves to the numerical computation of detonation problems.

4064 (MLM–3764(OP)) **Development of hermetic, optical fiber, laser initiated, pyrotechnic devices.** Kramer, D.P.; Ewick, D.W.; Beckman, T.M. EG and G Mound Applied Technologies, Miamisburg, OH (United States). [1991]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-88DP43495. (CONF-910430–33: 93. annual meeting and exposition of the American Ceramic Society (ACerS), Cincinnati, OH (United States), 28 Apr - 2 may 1991). Order Number DE93001969. Source: OSTI; NTIS (US Sales Only); GPO Dep.

It has been demonstrated that the fabrication of hermetic, optical fiber, laser initiated, pyrotechnic devices is possible. This new technology based on a laser/optical fiber combination in place of bridgewire(s) and pin(s) can readily be adapted to various engineering requirements. Several novel processing technique have been developed for fabricating the devices that exhibit the required strength and hermeticity to ensure the successful functioning of the device. Examples of several types of laser initiated devices have been fabricated and tested using a variety of pyrotechnic materials. These function tests have confirmed that reliable, high strength devices can be produced. The results illustrate that there are no fundamental reasons that laser ignited components should not be considered for future designs of pyrotechnic devices.

4065 (MLM–3765(OP)) **Application of isothermal calorimetry and uv spectroscopy for stability monitoring of pentaerythritol tetranitrate.** Dosser, L.R.; Pickard, J.M. EG and G Mound Applied Technologies, Miamisburg, OH (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-88DP43495. (CONF-9209162–2: 21.

North American Thermal Analysis Society meeting, Atlanta, GA (United States), 13-16 Sep 1992). Order Number DE93001970. Source: OSTI; NTIS; INIS; GPO Dep.

Thermal stabilities for a series of pentaerythritol-tetranitrate (PETN) samples with variable surf ace areas were monitored by isothermal calorimetry and UV spectroscopy over the temperature range of 363 to 408 K. Isothermal induction times measured with constant volume calorimetry under an air atmosphere and No evolution rates monitored by UV absorbance at 213 nm under vacuum correlated with the PETN surface area at temperatures equal to or exceeding 383 K. Rate data measured at 383 K are in accord with predictions based on detailed kinetic modeling. Below 383 K, NO evolution data suggested that additional geometric factors may be significant in controlling PETN stability. Mechanisms for influencing surface area upon the rate-determining step are addressed.

4066 **Hydrogen loaded metal for bridge-foils for enhanced electric gun/slapper detonator operation.** Osher, J.E. To Dept. of Energy. 20 Mar 1991. USAA patent application 7-672,27. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93002032. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The invention provides a more efficient electric gun or slapper detonator which provides a higher velocity flyer by using a bridge foil made of a hydrogen loaded metal.

4067 (CONF-890398–, pp. 29-36) **Free field stress, acceleration, velocity, and displacement data available from contained detonations at the Nevada Test Site.** Bass, R.C. (Sandia National Labs., Albuquerque, NM (United States)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

Sandia National Laboratories has been involved in earth motion measurement programs at the Nevada Test Site since activity began there in 1951. Early programs consisted of earth motion measurements made below air bursts that then comprised the majority of the test detonations. Measurements were also made on the surface and later underground tests through the 1950s and several high explosive tests. Large scalo programs included the RAINIER experiment and the later PNE related SCOOTER and BUCKBOARD conventional high explosive detonations. Data obtained during the air blast era and through the early portion of the underground test program are essentially limited to measurements of acceleration and velocity and to displacement values deduced from single and double integrations as appropriate. Measurement techniques developed since 1970 permit the gathering of stress wave shape data at over a range of a few tenths of a kilobar up to tens of kilobars. These measurements have primarily been attempted on Defense Nuclear Agency effects tests that have utilized tunnel emplacements in Rainier Mesa. This test configuration allows accurate, controlled gauge emplacement techniques that have also permitted more accurate acceleration, velocity, and displacement measurements. Measurement of pressure and acceleration has continued on LANL and LLNL vertically emplaced detonations though these test configurations are less desirable from gauge emplacement and positioning considerations.

4068 (CONF-890398–, pp. 75-91) **Effects of in-situ stress and fracture spacing on ground motion and spall from underground nuclear explosions.** Rawson, G. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

A large number of measurements on French and US underground nuclear tests are reviewed and analyzed. In understanding how geology influences the effects from tests, the French tests are particularly important. This is because the setting for the tests had larger fracture spacing and higher effective confining (in-situ) stresses than any US test. The importance of the French data review is especially important because a misunderstanding about the ground motion data is clarified. The measurements are almost certainly free-surface, not free-field, as has been repeatedly assumed. The author believes this analysis will serve to help restructure analytical modeling of certain earth responses to well coupled nuclear explosions. In particular he estimates that high in-situ stress environments enable tests to be conducted at much more shallow depths than the US experience without cratering or gross disruption of the ground surface. Explosion induced surface spall is expected to be significantly restricted by reduced jointing and fracturing of the rock coupled with increased in-situ stresses (when compared to US experience). Changes in surface waves and spall signals can also be expected. Spall signal character may indicate tests being conducted near the critical depth for 'containment.' A threshold is anticipated where increased in-situ stress limits spall until some strength criterion is exceeded. Then spall could contribute greatly to surface rupturing and even cratering.

4069 (CONF-890398–, pp. 102-104) **Far-field workshop.** Helmberger, D. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

The major issues addressed in the far-field workshop include many of the same topics discussed in the other workshops; namely, source excitation of phases, contamination of spall and tectonic release and how these are effected by depth of burial and material properties. The key to transportability of yield estimators lies in documentation of the latter effects. It was generally agreed that major improvements in yield estimation at smaller yields appears possible if adequate corrections for these source environmental effects and propagational distortions can be made. The discussion centered around the specific problems encountered with conventional yield methods based on short-period (m_b), long period Rayleigh waves (M_s and M_o) and Lg and the impact of broad-band (BB) data.

4070 (CONF-890398–, pp. 105-113) **The teleseismic manifestation of pP: Problems and paradoxes.** Lay, T. (Univ. of Michigan, Ann Arbor (United States)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

The nature of the free surface interaction for upgoing compressional waves from underground explosions has been the focus of active research for twenty years; however, there is still no consensus on this fundamental influence on the teleseismic radiation. Many techniques have been developed in attempts to quantify the pP arrival and any additional source complexity, yet all suffer from the limited bandwidth available in teleseismic P waves and the strong trade-offs between source, attenuation and receiver effects. The existence of complex spalling processes, readily observed in the near-field, which must be physically linked to the pP energy suggest the likelihood that pP will have a complex teleseismic manifestation. However, there is also compelling evidence that for periods longer than about 2 sec, pP should be a strong coherent phase. This is based on the differentiated appearance of P arrivals on WWSSN long period instruments for large events. The question at hand, then, is how much is known about the high frequency characteristics of the pP arrival? At present, the most stable procedure for addressing the teleseismic manifestation of pP appears to be simple broadband ground motion restitution. Methods which attempt to eliminate receiver effects explicitly either require too many assumptions about the source (as for intercorrelation) or involve instability in the spectral factoring of source and receiver terms for

narrow band data from overly similar suites of events (as for multi-station deconvolution). Analysis of a global distribution of broadband ground motions, for which event averaged characteristics could be determined, offers some promise for improving our understanding of the free surface interaction; however, there remains a tradeoff with source and attenuation models which is intrinsic to the problem.

4071 (CONF-890398–, pp. 157-158) **The effects of spall on teleseismic P-waves: An investigation with theoretical seismograms.** Schlittenhardt, J. (Federal Inst. for Geosciences and Natural Resources, Hannover (Germany)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology*. 251p. Order Number DE89016501. Source: OSTI; NTIS.

The HARZER event was monitored by seismic instruments at both local and regional distances and there is evidence that this event produced seismic radiation related to the spallation of surface layers. The effect of spall on teleseismic P-waves is investigated using theoretical seismograms calculated with an extended reflectivity method. The source excitation function for the spall consists of a system of three vertical single forces representing the detachment, relaxation and slapdown phase of the spall process. This equivalent point source model is momentum conserving, and can be parameterized by two quantities, the momentum I_s and the ballistic period T_s of the spalled mass.

4072 (CONF-890398–, pp. 159-165) **Body wave observations of tectonic release.** Wallace, T.C. (Univ. of Arizona, Tucson (United States)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology*. 251p. Order Number DE89016501. Source: OSTI; NTIS.

Precise and accurate yield determination from seismic waveforms requires detailed knowledge of all the processes which are contributing to the waveform. Besides the explosion source, other important processes include spall, 'non-elastic' pP, scattering, and tectonic release. Tectonic release is observed as nonisotropic seismic radiation; the presence of SH and Love waves is a fairly common observation on the seismic records of many underground nuclear explosions. Tectonic release is thought to be 'a release of preexisting strains in the material around the explosion.' There are two basic models for this strain release: (1) triggered movement on nearby faults, and (2) stress relaxation from the highly fractured zone immediately around the detonation point. For either of the stress release models, the long-period teleseismic radiation pattern can be represented by an equivalent double-couple source. In principal, the seismic radiation field from the tectonic release could bias a yield estimate which was based on a seismic amplitude measurement. Depending on the orientation of the double couple representing the tectonic release, seismic signals from an explosion could be enhanced or diminished. In this paper, the author reviews the evidence for a high-frequency signature of tectonic release, and outlines outstanding problems.

4073 (CONF-890398–, pp. 184-185) **Anomalies in the results of the SALMON experiment.** Glenn, L.A. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. DOE Contract W-7405-ENG-48. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology*. 251p. Order Number DE89016501. Source: OSTI; NTIS.

SALMON was a 5.3 kt tamped nuclear explosion at a depth of 830 m that took place on October 22, 1964 in the Tatum salt dome near Hattiesburg, Mississippi. Free-field particle velocity was measured at horizontal distances ranging from 225 to 742 m from the work point. The data indicate that the salt behaved inelastically out to the farthest gauge location. Moreover, a 2-wave structure was observed, with propagation velocities of 4.55 km/s and 3.80 km/s. The former value agrees well with the predetermined p-wave speed in the Tatum salt. The latter value is 300 m/s higher than the predetermined bulk wave speed, which would be the propagation velocity of the plastic wave if the salt were an elastic-perfectly plastic medium. Laboratory measurements showed that the yield strength is independent of pressure, with values ranging from 35 MPa for annealed salt to over 80 MPa for polycrystalline salt. Computational attempts to simulate the experimental results with these data were unsuccessful. An explanation for the anomalous behavior appears to be that the strength of the in situ salt is extremely sensitive to strain hardening. The plastic wave speed is enhanced, in this case, by an increment that is proportional to the gradient of the yield strength with respect to strain. Calculations made with a constitutive model in which the salt first hardens with plastic work, and then loses virtually all strength as the plastic work exceeds a fixed limit, give good qualitative agreement with most observations. Nevertheless, it must be noted that the values of the model parameters required to give even modest agreement are inconsistent with independently measured material properties.

4074 (CONF-890398–, pp. 186-204) **Estimates of seismic coupling and nuclear explosion yields using seismic magnitude and moment data.** Archambeau, C.B. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology*. 251p. Order Number DE89016501. Source: OSTI; NTIS.

Observations of the spectral character of direct compressional waves from underground nuclear explosions, both in the near and far field distance ranges, suggest that the purely explosive produced P wave has a form that can be represented by a simple step function pressure equivalent. Using this simple equivalent source representation and the assumption that the (reversible) work done on the medium outside the elastic radius is proportional to yield, it follows that m_b values depend directly on yield and upon two source dependent coupling parameters K_c and K_E, which are termed the non-linear and elastic coupling parameters, respectively. It is found that the available magnitude-yield data for US nuclear explosions, in a wide variety of media, require four sets of the coupling constants, K_c and K_E, for a simultaneous description of both m_b and the M_s observations. The resulting empirical magnitude-yield curves correspond to a high coupling set for m_b and M_s, two intermediate coupling sets and a low coupling set. These magnitude-yield curve sets provide a means of estimating yield using both m_b and M_s together, provided tectonic release effects and differences in test site absorption, relative to NTS, are taken into account. On the other hand, if the range of coupling at some other test site is assumed to be within the range sampled by the US data, then it is possible to estimate the (combined) difference in near site absorption and tectonic effects between NTS and any other test site.

4075 (CONF-890398–, pp. 241-242) **Discrete element modeling of explosions in jointed rocks.** Walton, O.R. (Lawrence Livermore National Lab., CA (United States)); Heuze, F.E. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology*. 251p. Order Number DE89016501. Source: OSTI; NTIS.

The character of seismic waves emanating from contained underground explosions in fractured rock may be strongly affected by the discrete nature of the jointed rock surrounding the explosion. Traditionally, the analysis of explosive events has been performed by using dynamic continuum codes, mostly based on finite difference approximations. These techniques are not adequate for calculating full cratering processes for less deeply buried explosives primarily because they cannot handle large displacement discontinuities, fragmentation and subsequent ballistic motion of rock fragments. Discrete element models, on contrast, have only recently been applied to dynamic simulation of explosive effects and are relatively immature as a modeling technique. Such models follow the motion of each individual rock block, and produce shear dilatant forces as a natural consequence of block displacements

and rotations. Thus, these models are well suited for simulation of cratering in hard rock and work is currently underway to enhance the capabilities of current two and three dimensional models for dynamic simulation of explosive events. Discrete element simulations of cratering events in fractured rock with existing models indicate that strong shear dilatant forces act in the early stages of lifting the overburden. More deeply buried events may also exhibit temporary shear displacements in localized regions of the overburden of sufficient magnitude to produce significant shear dilatant forces. Such behavior could exhibit itself as a distributed 'secondary' source, separated in space and time from the primary compressive wave emanating directly from the explosive cavity region.

4076 (LA–12434-MS) **Static-stress analysis of dual-axis confinement vessel.** Bultman, D.H. Los Alamos National Lab., NM (United States). Nov 1992. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93000499. Source: OSTI; NTIS; GPO Dep.

This study evaluates the static-pressure containment capability of a 6-ft-diameter, spherical vessel, made of HSLA-100 steel, to be used for high-explosive (HE) containment. The confinement vessel is designed for use with the Dual-Axis Radiographic Hydrotest Facility (DARHT) being developed at Los Alamos National Laboratory. Two sets of openings in the vessel are covered with x-ray transparent covers to allow radiographic imaging of an explosion as it occurs inside the vessel. The confinement vessel is analyzed as a pressure vessel based on the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1, and the Welding Research Council Bulletin, WRC-107. Combined stresses resulting from internal pressure and external loads on nozzles are calculated and compared with the allowable stresses for HSLA-100 steel. Results confirm that the shell and nozzles of the confinement vessel are adequately designed to safely contain the maximum residual pressure of 1675 psi that would result from an HE charge of 24.2 kg detonated in a vacuum. Shell stresses at the shell-to-nozzle interface, produced from external loads on the nozzles, were less than 400 psi. The maximum combined stress resulting from the internal pressure plus external loads was 16,070 psi, which is less than half the allowable stress of 42,375 psi for HSLA-100 steel.

4077 (SAND–92-0452) **SE3158 development report.** Siddiqui, M.A. Sandia National Labs., Albuquerque, NM (United States). Sep 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93004026. Source: OSTI; NTIS; GPO Dep.

This report describes the SE3158 design and development tester that was designed by Digital Subsystem III Division 2314 at Sandia to support the development of the MC4073 SRAM II Programmer. The primary purpose of the SE3158 is to test the MC4073 SRAM II Programmer during its development phase.

4078 (SAND–92-0837) **Evaluation of factors affecting the timing capabilities of the MC3858 sprytron.** Lee, S.R.; Barclay, C.J. Sandia National Labs., Albuquerque, NM (United States). Apr 1992. 39p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93003234. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The switch delay time of the MC3858 sprytron was measured using a test matrix consisting of 36 different trigger circuit configurations. The test matrix allowed the measurement of switch delay times for peak trigger voltages ranging from 47 V to 1340 V and for stored trigger energies ranging from 0.023 mJ to 2.7 mJ. The average switch delay time was independent of peak trigger voltage above approximately 800 V. Similarly, the average switch delay was independent of trigger stored energy above approximately 0.5 mJ. Below these saturation values, the average switch delay increases rapidly with decreasing trigger voltage or esergy. In contrast to the average switch delay time, the shot-to-shot variability in switch delay time does not appear to be strongly affected by peak trigger voltage as long as the trigger voltage is groater than 100 V. Below 100 V, the variability in switch delay time rises rapidly due to failure of the trigger to undergo immediate high voltage breakdown when trigger voltage is applied. The effect of an abnormally-high-resistance trigger probe on switch delay time was also investigated. It was found that a high-resistance probe behaved as a second overvoltage gap in the trigger circuit. Operation with a peak trigger voltage greater than the breakdown voltage of this second gap yielded delay times comparable to operation with a normal trigger. Operation with a peak trigger voltage less than the breakdown voltage of this second gap increased the switch delay time by an amount comparable to the time required to ramp the trigger circuit output up to the breakdown voltage of the second gap. Finally, the effect that varying the bias voltage applied to the sprytron has on switch delay time was measured. The switch delay time did not appear to depend on bias voltage for bias voltages between 725 V and 2420 V.

4079 (CONF-890398–, pp. 1-5) **Near-field workshop.** Murphy, J.R. (S-Cubed, Reston, VA (United States)); Stump, B.W. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

The objectives of the near-field working group meeting were to draw up specific recommendations for the archiving of existing data and the design of data collection experiments which could be directed toward the improved definition of the seismic source function corresponding to underground nuclear explosions. Preliminary discussions were wide-ranging and served to generate a rough consensus concerning both the current status of the empirical data base and a general recommended course of action for addressing some of the more important outstanding problem areas. With regard to the existing near-field data base, it was agreed that a coordinated effort between the various DOE laboratories is required in order to insure that the historical data are reduced and cataloged in a uniform manner and made readily available to those conducting research on the explosion seismic source function.

4080 (CONF-890398–, pp. 13-28) **Spatial variations in free-field and free surface ground motions from explosions and the constraint of physical source mechanisms.** Stump, B.W. (Southern Methodist Univ., Dallas, TX (United States)); Reinke, R.E. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

A physically based understanding of the explosive source function is necessary for improving discrimination between earthquakes and explosions as well as refining yield estimates for explosions. The physical understanding of source processes allows prediction and extrapolation to new environments where experimental evidence may not exist. A purely experimental approach to the problems of discrimination and yield determination may be adequate for limited conditions but can not be acceptable for the wide range of conditions that exist in the earth. For this reason the authors report on recent studies designed to constrain the physical mechanisms accompanying the generation of seismic waves from explosive sources.

4081 (CONF-890398–, pp. 37-43) **Amplitude-dependent attenuation and implications for the seismic source.** Bonner, B. (Lawrence Livermore National Lab., CA (United States)); Wanamaker, B.J.; Taylor, S.R. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

As an outgoing stress pulse travels away from an explosive source, it encounters regions in which the material properties apparently change with range. Amplitude decays more rapidly near the source, until finally at some distance the stress pulse attenuates at a constant rate appropriate for arbitrarily small strains. Field

observations and laboratory experience suggest that there is a near-source region of amplitude-dependent attenuation, beyond the range where macroscopic damage to the host medium occurs. For example, source corner frequencies computed from finite-difference simulations of medium response are systematically higher than those inferred from teleseismic observations (Rimer and Cherry, 1982, and Archambeau, 1985). Spectral discriminants for low-yield events at the Nevada Test Site (NTS) show that explosions are deficient in high frequencies relative to earthquakes. Small explosions show excessive roll-off of power e.g., spectra between 2 and 8 Hz, e.g., greater than expected for second-order models with reasonable Q corrections (Taylor et al., 1988). Attenuation of wavefields in dome salt requires strong attenuation (Q^{-1} = 0.05) in the near-source region (Trulio, 1985). Attempts to model source effects in dome salt require dramatic nonlinear attenuation effects to match observations over the strain range to 10^{-6} (Minster and Day, 1986). Although there are alternative explanations for these observations, often requiring that the source rise time be finite, amplitude-dependent attenuation is observed without ambiguity in laboratory experiments (Gordon and Rader, 1971).

Modeling teleseismic body waveforms from earthquakes has progressed considerably in recent years while corresponding progress in modeling explosions has not. There are still disagreements on the nature of the explosion source with several representations of RDPs available, w^{-2} and w^{-3}, and with differences in corner frequency. It appears that teleseismic data alone can not resolve this issue because of complications caused by the Earth's attenuation, and complex $_pP$ interaction with spall. Thus, modeling the near-in data may help answer some questions and focus attention on some key issues. In this brief review the authors examine some of the difficulties encountered in near-in modeling in terms of crustal complexities and styles of interpreting the data in terms of source characterization.

4083 (CONF-890398–, pp. 92-99) **Stochastic geologic effects on near-field ground motions.** Reinke, R.E. (Air Force Weapons Lab., Kirtland AFB, NM (United States)); Anderson, K.R.; Goerke, R.V.; Leverette, J.A.; Stump, B.W. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology*. 251p. Order Number DE89016501. Source: OSTI; NTIS.

Over the course of the past few years the Air Force Weapons Laboratory has conducted a series of small scale high explosive field experiments in an effort to better understand the seismic source function. One of the lessons learned from these experiments is that random geologic variations have a significant influence on the results of these experiments and that any attempt to model these experiments must take into account these stochastic effects. Several of the tests, ranging in size from 5 to 100 pounds, were designed specifically to study the effects of random geologic inhomogeneity upon small scale spatial variability in ground motion. This paper discusses the results of these tests and the implications of random geologic variability for the interpretation of near-field ground motions.

Lawrence Livermore National Laboratory routinely fields instrumentation on underground nuclear tests, usually to determine whether various stemming features are properly emplaced and how well they perform when challenged, and to answer basic phenomenological questions. The Containment Program is also responsible for fielding appropriate instrumentation related to the Threshold Test Ban Treaty (TTBT) and more general treaty verification activities. The authors routinely measure motion in the upper half of the emplacement hole, at the surface near ground zero, and in the recording trailer park. They have occasionally measured ground motion in satellite instrumentation holes and on the surface at distances somewhat beyond the depth of burial. The primary purpose of these measurements has been to determine the effects of ground motion on event-related features such as stemming plugs within the emplacement hole, recording trailers, and near by drill holes planned for other events. Consequently, the instrumentation is often not optimally located for the purpose of gathering specific free-field ground motion data. Data from many of these measurements are, however, representative of the 'free-field' ground motions.

4085 (CONF-890398–, pp. 114-127) **Regional seismic observations from NTS explosions.** Taylor, S.R. (Lawrence Livermore National Lab., CA (United States)). The interest in monitoring a Comprehensive Test Ban Treaty or a Low Yield Threshold Test Ban Treaty using in-country networks has produced a vast amount of literature on the generation and propagation of regional seismic phases. Regional phases have proven to be essential for improving detection, identification, and yield estimation capabilities at small magnitudes where teleseismic signals are hampered by poor signal to noise ratios. However, regional signals are typically very complex and it is unclear how much source information is contained in them or whether they are totally dominated by propagation effects. For example, Gupta and Blandford (1983) have demonstrated the importance of scattering by heterogeneities on the nature of regional signals. Even regional synthetic seismograms calculated in a simple layered earth structure demonstrate the complex nature of regional signals. In this paper, the author discusses the utilization of regional phases to study the explosion source. This work was initiated as an outgrowth of a regional discrimination study of western US earthquakes and NTS explosions. In an attempt to identify why certain explosions were classified as earthquakes for certain discriminants, the author has learned how near-source processes may affect the radiated seismic signals. He begins with a description of some of the discriminants and identification of explosion outliers. Using information regarding emplacement geometry, simple numerical models, and available close-in accelerometer data, he has been able to identify a number of near-source processes that can complicate the generation of regional phases. It is concluded that a number of near-source processes mostly acting above the explosion source region can explain the anomalous data points identified in this study.

4086 (CONF-890398–, pp. 128-134) **Seismic moment estimation of underground nuclear explosions: A review of surface wave results and implications for the source.** Patton, H.J. (Lawrence livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. DOE Contract W-7405-ENG-48. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology*. 251p. Order Number DE89016501. Source: OSTI; NTIS.

One of the outstanding unsolved problems in the understanding of the explosion source is the long-period scaling of the source spectrum. This is graphically illustrated in Murphy's paper on seismic source functions and magnitude determinations, where various near-regional, regional, and teleseismic data for Nevada Test Site (NTS) explosions are compared to the modified Mueller and Murphy source model. General agreement in terms of source spectrum scaling is found between the data and the model with the exception of the longer-periods. Figure 1 summarizes the crux of the

problem, showing that data for the static level of the reduced displacement potential, $\psi\infty$, scales at a significantly higher rate than the model does. In particular, the problem seems to be in the long-period surface-wave data at high yields (Y > 100 kt), for which $\psi(\infty)$'s are computed using estimates of the seismic moment, M_o. A comparable dataset of M_s measurements are found to scale as 1.33logY, while M_s data for lower yields (Y < 100 kt) scale as 0.84logY in much better agreement with the Mueller and Murphy source, which predicts 0.76logY. An upturn in M_s:m_b data at M_s 3.7, m_b 5.5 for NTS (Evernden et al., 1971) is consistent with higher scaling rates in the M_s data at high yields. Hence, the high yield M_s and M_o measurements for NTS explosions are not reconcilable with the long-period scaling predicted by source models of underground nuclear explosions. This paper reviews recent developments that have led to significant gains in analyzing long-period data recorded at regional distances.

4087 (CONF-890398–, pp. 135-142) **P_n from the Nevada Test Site.** Burdick, L.J.; Saikia, C.K.; Smith, N.F. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

A regional event discriminant is being developed and tested based on the wave form of high frequency P_n. The data base being used in the development consists of signals from explosions and earthquakes recorded on the western US digital network. It has been discovered that at most stations the waveform of P_n onset from contained explosions is remarkably stable and different from the corresponding waveforms from earthquakes. Modeling reveals that the distinctive character of their waveform is caused by a strong pP_n arrival. The observed pP_n phase consistently arrives later than the predicted elastic time. For Pahute events, the amplitude of effective pP is close to the elastic predictions. For Yucca Valley, it is consistently larger indicating the effect of a site dependent nonlinear process in the source region. An appropriate value of t^* for P_n appears to be in the range of 0.1 to 0.2 seconds. The frequency content of the explosion P_n energy indicates that it is related to a turning ray in the lid gradient rather than a true head wave traveling on the crust mantle interface. The discrimination capacity of the P_n waveform was measured quantitatively by correlating the average explosion P_n trace with a data base of explosion and earthquake signals. The populations separated to a significant level down to magnitudes less than 4.0. It was found that the average explosion waveform from one station could be used to discriminate data from a different station establishing that the P_n waveform discriminant is transportable.

4088 (CONF-890398–, pp. 143-148) **Broad band estimates of the seismic source functions of explosions from far-field observations of p-waves.** Douglas, A. (Ministry of Defence, Reading (United Kingdom)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

The paper presents estimates of the seismic source functions of Nevada Test Site (NTS) explosions derived by the deconvolution of the short-period (SP) P seismograms. The procedure used is that of Douglas et al (1987). The SP P seismogram is passed through a filter with a response at frequency ω of $|a_2(\omega)|a_1(\omega)^{-1}b(\omega)^{-1}$, where $a_1(\omega)$ is the response of the recording system, $a_2(\omega)$ the response of a broad-band (BB) system and $b(\omega)$ is the response of the chosen attenuation operator. $|b(\omega)|$ has the form $\exp(-\omega t^*/2)$ where t^*, the ratio of travel time to specific quality factor Q, may be frequency dependent. The phase response of $b(\omega)$ is specified from theoretical considerations to ensure the operator is causal. By using $|a_2(\omega)|$ for the BB response rather than $a_2(\omega)$ all phase shifts due to the recording system are removed. Stewart and Douglas (1983) show that such phaseless seismograms are sometimes easier to interpret than those with the phase shift present. In addition to the filter specified above, further filtering usually has to be applied to attenuate low and high frequency noise.

4089 (CONF-890398–, pp. 149-156) **Near-source scattering of Rayleigh to P waves in teleseismic arrivals of NTS shots.** Gupta, I.N. (Teledyne Geotech, Alexandria, VA (United States)); Jih, R.S.; Wagner, R.A. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

Theoretical and experimental studies indicate that a large amount of ground surface motion in the vicinity of a shallow explosion is contained in surface waves. Greenfield suggested that a significant portion of arrivals in P coda (taken to be between 10 and 40 sec after first P) may be due to near-surface scattering of explosion-generated Rayleigh waves into teleseismic P. Gupta et al. (1985) proposed that near-source scattering of fundamental-mode Rayleigh waves (Rg) into teleseismic P (referred to as Rg → P hereafter) may be responsible for the large arrivals immediately following P and pP on NORSAR records of NTS shots. Gupta and Blandford also found evidence for 'secondary arrivals due to surface interaction phenomena' which showed greater dependence on shot medium velocity than the earlier teleseismic arrivals of P and pP. Several other investigators suggested this later arrival to be the slapdown phase associated with near surface spallation. Two-dimensional linear finite-difference simulations of explosion sources in the Yucca Flats (NTS) by McLaughlin et al. indicated the presence of large secondary arrivals due to scattering of surface waves mainly at offsets in the basement structure and at the sides of the valley. Numerical modeling of explosions within the laterally varying Yucca Flats geological structure by Stead and Helmberger also showed the locally scattered Rayleigh waves to generate large arrivals following P and pP. The preliminary results based on a comparison of the observed and synthetic seismograms of a fairly large number of Pahute Mesa (NTS) shots recorded at NORSAR and EKA provide additional support in favor of the Rg → P scattering mechanism.

4090 (CONF-890398–, pp. 166-176) **The high frequency character of P-wave form earthquakes and explosions.** Walter, W.R. (Univ. of Nevada, Reno (United States)); Priestley, K.F. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

The recent recording of the Soviet Joint Verification Explosion (JVE) at near (180-260) and regional distances (1,300-2,800 km) provides a unique data set to examine the general problem of discriminating between underground nuclear explosions and naturally occurring earthquakes. In particular this explosion can be compared with earthquake data recorded previously at these sites and others which have travel paths wholly or mostly with the USSR. This data will allow a comparison of the excitation and propagation characteristics of regional phases from explosions and earthquakes. The authors present here a preliminary comparison of the Soviet JVE, a Soviet peaceful nuclear explosion (PNE) and an earthquake recorded near the Soviet Kazakh test site with an epicentral distance of 640 km.

4091 (CONF-890398–, pp. 177-179) **Forward-modeling workshop.** Day, S.M. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

The Forward Modeling Working Group identified a number of phenomena which still constitute significant gaps in technical understanding of underground nuclear explosion phenomenology. For example: (1) Inelastic zone response. What is the appropriate formal treatment of the inelastic regime, defined as the regime in which rock response is nonlinear, but stresses are insufficient to cause macroscopic failure? This regime is generally considered to

encompass roughly the strain range 10^{-3} to 10^{-6}. (2) Hydrodynamic yield estimation. Potential scaling problems associated with hydrodynamic yield estimation methods at low yield have not been sufficiently explored. (3) Secondary sources. How does spall effect the seismic signal from Soviet tests? (4) Test geometry. Tunnel shots a low yield need to be better understood from a verification perspective, as do the effects of shooting in or near the shatter zone of a previous test.

4092 (CONF-890398–, pp. 180-181) **Multi-dimensional simulation of nonlinear source processes and seismic wave excitation.** Day, S.M. (San Diego State Univ., CA (United States)); Stevens, J.L.; Rimer, N.; Barker, T.G.; McLaughlin, K.L. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

To support treaty verification, it is desirable to be able to predict regional and teleseismic ground motion from underground tests using nonlinear continuum mechanics (in the near-source region) and synthetic seismogram methods (in the elastodynamic regime). Ideally, such predictive calculations are to be based on field and laboratory characterization of the rock at the test site. To this end, much effort has been expended, both in verification and containment programs, to construct nonlinear constitutive models based on accepted rock mechanics principles. The parameters in these constitutive models are quantities which are, in principle, observable in the laboratory. The reality is, however, that in order to match near-source, free-field ground motion from in situ tests, one generally must adjust the constitutive model parameters to values which often differ significantly from the apparent laboratory values. Thus, calibration of present constitutive models ultimately relies on ground motion data from in situ tests, and therefore the models do not provide a reliable predictive capability for testing environments in which there is no prior experience. Nevertheless, once calibrated with ground motion data, the models provide a basis for investigating the seismic effects introduced by perturbations to the testing geometry. The authors review results from two- and three-dimensional explosion simulations to investigate the seismic effects of (1) variations in the depth of burial, (2) variations in the tectonic prestress, and (3) induced block motion in the source region.

4093 (CONF-890398–, pp. 182-183) **The transition to elastic behavior in the vicinity of an underground explosion.** Minster, J.B.; Day, S.M.; Shearer, P.M. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

It is well known from laboratory experiments that the attenuation of elastic waves is amplitude dependent at strain greater than 10^{-6}. There exists therefore an intermediate strain regime in which the deformation is not strong enough to cause macroscopic material failure, but is large enough to affect wave propagation. For a wide variety of rocks, the amplitude dependence of Q for monochromatic waves at low confining pressure is approximated quite accurately in the strain range 10^{-6} to 10^{-4} by $Q^{-1}(\varepsilon_m) = Q_a^{-1} + \gamma\varepsilon_m$, where ε_m is the strain amplitude and the intercept Q_a^{-1} represents the low amplitude anelastic (that is, linear) attenuation. Because Q depends on amplitude, the rheology is nonlinear, and reflects the influence of inelastic mechanisms. The nonlinear nature of the rheology means that the analytical tools usually employed to solve wave propagation problems are not valid in this intermediate strain regime. This raises a number of questions regarding the acquisition and interpretation of experimental data. Nevertheless, linear analysis of laboratory data which clearly exhibits nonlinear traits is attractive, in the sense that it yields fairly simple and apparently self-consistent results. Furthermore, a reasonable physical interpretation appears feasible. A number of possible physical mechanisms predict an amplitude dependence of attenuation. The latter mechanism appears to satisfy many observations of nonlinear Q in geologic materials.

4094 (CONF-890398–, pp. 205-214) **Differing P and S wave source histories from tectonic release models: A possible complication to second order moment tensor inversions of Rayleigh waves from nuclear explosions.** Harkrider, D.G. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

A frequently used model of tectonic release is a double couple superimposed on an explosion. The author compares synthetics of this and more realistic models in order to investigate the effect of the dimensions of the tectonic release model or equivalently the effect of differing P and S wave source histories. For instance, the pure shear cavity release model is a double couple with separate P wave and S wave source histories. The time scales are proportional to the source region's dimension and differ by their respective body wave velocities.

4095 (CONF-890398–, pp. 215-230) **Radiation patterns from explosions in anisotropic media.** Mandal, B. (Massachusetts Inst. of Tech., Cambridge (United States)); Toksoez, M.N. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

The primary objective of this study is to determine the effect of seismic anisotropy on the radiation patterns from an explosion in the anisotropic medium by calculating the complete synthetic seismograms. Theoretical seismograms show that radiation patterns are strongly affected by the anisotropy. An explosion in an anisotropic medium with horizontal axes of symmetry generates P, SV and Rayleigh waves whose amplitudes vary with azimuth, and significant transverse (SH) waves at certain azimuths. These effects could be explained by the non-spherical source due to the direction dependence of elastic moduli and by the complicated reflection and conversion phenomena of waves propagating in the anisotropic media.

4096 (CONF-890398–, pp. 231-232) **Geological models in 1-D and 2-D nuclear event calculations that influence surface motion and spall.** Rambo, J.T. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

Modeling the surface motions generated by nuclear sources can help with Treaty Verification issues, such as yield estimation and discrimination. Over the last fifteen years, researchers have studied the Nevada Test Site (NTS) event sites by making 1-D and 2-D containment related calculations that simulate a variety of geologic and material models. They found that surface motions are influenced by yield, depth of burial, and material properties, both at the source and toward the surface. Since depth of burial and yield are usually known, material property modeling is of main interest. The two properties primarily influencing calculated surface motion are gas porosity and elastic strength. There are combinations of these parameters from the working point to the surface that can have a large affect on the ground motion. The author has made multiple calculations to test material property sensitivities to surface motion. Calculations and experimental data have been very useful in demonstrating the phenomena of focusing from a water table. He discusses two sites: one site from which most data were taken from the subsurface with a single station at the surface, and the second site from which all data were taken with a surface array of velocity gauges.

4097 (CONF-890398–, pp. 233-240) **Simulation of regional seismograms, teleseismic body waves, and Rayleigh wave phase shifts using two-dimensional nonlinear models of explosion sources.** Stevens, J.L. (S-Cubed, La Jolla, CA (United States)); McLaughlin, K.L.; Day, S.M.; Shkoller, B.; Barker, T.

Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

Two-dimensional nonlinear simulations of underground nuclear explosions have been coupled to wave propagation codes to generate synthetic seismograms from complex source models. Two-dimensional simulations were performed for a range of depths in Shagan River and Pahute Mesa earth models. Simulations in granite were performed with and without tectonic prestress. During each of these calculations, the displacements and stresses were saved on a monitoring surface surrounding the nonlinear region. Two-dimensional Green's functions were calculated for each point on the monitoring surface, and the displacements and stresses were integrated to determine the ground motion at a receiver. Green's functions were calculated for far body waves, for fundamental mode surface waves, and for complete regional waveforms. The regional Green's functions were calculated using wave number integration.

4098 (CONF-890398–, pp. 243-251) **Three-dimensional simulations of ripple-fired quarry blasts in Massachusetts.** Wojcik, G.L. (Weidlinger Associates, Los Altos, CA (United States)); Vaughan, D.K. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

This talk describes some numerical model simulations of the San Vel Quarry experiment in Littleton, Massachusetts, performed during the summer of 1987 by Stump, et al. (1987) and AFGL, MIT, and Boston College researchers. These simulations are intended to support continuing field work on quarry explosion source effects as they pertain to Test Ban Treaty verification, involving Stump at SMU, Reinke of the AFWL, and others in the AFGL/DARPA Program. The ultimate aim of this work is to gain a better understanding of conventional quarry blast source effects in terms of shot distribution and sequencing, as well as local topography and geology. There are a number of approaches available for understanding this complex phenomenon including (1) conventional layered half-space interpretation, (2) field data acquisition and interpretation, (3) physical model experiments, and (4) numerical experiments. Since the quarry is three-dimensional with a very nonuniform surface, i.e., a big hole in the ground, conventional half-space methods are inadequate, leaving field data and models as the best source of insight. The principal issue addressed here is the practicality of using large-scale, 3-D finite element model analysis as a method of both understanding and generalizing quarry-derived near-field data.

4099 (CONF-890398–, pp. 6-12) **Free-field observations from underground nuclear explosions.** Murphy, J.R. (S-Cubed, Reston, VA (United States)). Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

In spite of the experimental difficulties which have been briefly illustrated in this paper, much valuable free-field ground motion data have been recorded during the course of the US underground testing program. Table 1 lists the explosions conducted prior to about 1970 for which reduced displacement potentials have been estimated from subsurface recordings and published in various post-shot reports and summary documents (Perret and Bass, 1975; Murphy, 1978; Murphy and Bennett, 1979). It can be seen that a variety of different source media are represented, including salt, granite, dolomite, sandstone/shale, wet and dry tuff and wet and dry alluvium. These data represent a unique resource for evaluating the dependence of seismic source coupling on emplacement medium and for the calibration of theoretical models of the explosive source. However, due to complications associated with medium heterogeneity such as those illustrated in Figures 1 and 2, this potential has never been fully realized. Given the advances in computer and material modeling capability which have occurred over the past decade, it may now be feasible to reinvestigate some of these data using more realistic propagation path models and thereby obtain improved insight into the explosive seismic source function.

4100 (CONF-890398–, pp. 44-51) **Freefield data and the seismic source function: New source parameter results.** Denny, M.D. Lawrence Livermore National Lab., CA (United States). 12 May 1989. From DOE/LLNL symposium on explosion-source phenomenology; Lake Tahoe, CA (United States); 14-16 Mar 1989. In *Proceedings of the DOE/LLNL symposium on Explosion-Source Phenomenology.* 251p. Order Number DE89016501. Source: OSTI; NTIS.

In an effort to better understand the seismic source function, the author began a study of failure mechanisms and of source parameter estimation techniques. Some results from the study of failure mechanisms by numerical simulation are presented by Lew Glenn. In this paper some new source parameter results obtained from freefield data are presented.

The objectives of early warning network are: The determination of gamma radiation (background) levels in air which depend on location and time, evaluation of any situation resulting from radiation or nuclear accident out of boarder, and after that reporting the emergency situation to relevant authorities on the national and international levels. Monitoring stations were installed using Gm tubes to cover boarder lines from south to north and east to west as follows: Damascus, Darra, Latakia, Tartous, Aleppo, Kamishly, Ragaa, and Qunitra. The following modes of communication: Telephone line, leased line, direct connection, and Syrian data network were used in the Syrian early network. This project was carried out in cooperation with IAEA under project no. RER/9/003. (author). 22 figs., 1 tab.

4105 (ANL/CP–76983) **AQUIS: A PC-based air quality and permit information system.** Smith, A.E. (Argonne National Lab., IL (United States)); Huber, C.C.; Tschanz, J.; Ryckman, J.S. Jr. Argonne National Lab., IL (United States). [1992]. 13p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9209160–20: International symposium on energy, environment and information management, Argonne, IL (United States), 15-18 Sep 1992). Order Number DE92040092. Source: OSTI; NTIS; INIS; GPO Dep.

The Air Quality Utility Information System (AQUIS) was developed to calculate and track emissions, permits, and related information. The system runs on IBM-compatible personal computers using dBASE IV. AQUIS tracks more than 900 data items distributed among various source categories and allows the user to enter specific information on permit control devices, stacks, and related regulatory requirements. The system is currently operating at seven US Air Force Materiel Command facilities, large industrial operations involved in the repair and maintenance of aircraft. Environmental management personnel are responsible for the compliance status of as many as I,000 sources at each facility. The usefulness of the system has been enhanced by providing a flexible reporting capability that permits users who are unfamiliar with database structure to design and prepare reports containing specified information. In addition to the standard six pollutants, AQUIS calculates compound-specific emissions and allows users to enter their own emission estimates. This capability will be useful in developing air toxics inventories and control plans.

Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9209160–11: International symposium on energy, environment and information management, Argonne, IL (United States), 15-18 Sep 1992). Order Number DE92040095. Source: OSTI; NTIS; INIS; GPO Dep.

The subject of global environmental change is emerging as one of the most hotly debated international issues for the 1990s. In fact, our earth system has undergone a nature-induced gradual change in climate on both a temporal scale that spans over millions of years and a spatial scale ranging from regional to transcontinental. Pollutant emissions associated with population growth and industrial activities manifest the anthropogenic climatic forcing that has been superimposed on the background of natural climate fluctuations. Our incomplete understanding of the global impacts of environmental pollution on the earth systems (atmosphere, biosphere, hydrosphere, cryosphere, and lithosphere), however, make the prediction of the timing, magnitude, and patterns of future global change uncertain. This paper examines the science and policy background of global environmental change. The major scientific uncertainties and policy issues confronting decision makers are identified; and the scientific framework, as well as current national and international research programs aimed at resolving the scientific uncertainties, are discussed. A coherent, stable, and flexible policy is needed to provide a foundation for coordinated international-interagency programs of observation, research, analysis, and international negotiation toward a policy consensus concerning global environmental security. On the basis of what is currently known about global change, recommendations are presented on both near-term and long-term policy option decisions.

4107 (ANL/CP–77379) **Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed.** Wesely, M.L. Argonne National Lab., IL (United States). [1991]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9110430–1: 1991 atmospheric radiation measurement science team meeting, Washington, DC (United States), 28 Oct 1991). Order Number DE93000512. Source: OSTI; NTIS; GPO Dep.

Planning for the initial complement of instrumentation at the first Clouds and Radiation Testbed (CART) site has concentrated on obtaining a sufficient level of instrumentation at the central facility for studies of radiative transfer processes in a narrow column above the site. The auxiliary facilities, whose sole purpose is cloud mapping above the central facility, will not be activated as such until provisions are made for all-sky imaging systems. In the meantime, the auxiliary facilities wig be instrumented as extended facilities if the locations are suitable, which would be the case if they serve the primary purpose of the extended facilities of obtaining representative observations of surface energy exchanges, state variables, precipitation, soil and vegetative conditions, and other factors that must be considered in terms of boundary conditions by single-column and related models. The National Oceanic and Atmospheric Administration (NOAA) radar wind profiler network is being considered to provide observations of vertical profiles at the boundaries of the CART site. If possible, these locations will be used for boundary facilities. Efforts are proceeding to gain access to the wind profiler network data and to determine if a sufficient number of the profilers can be equipped as Radio Acoustic Sounding Systems (RASS). Profiles of temperature as well as winds are needed at the boundary facilities for studies with single-column models and four-dimensional data assimilation models. Balloon-home sounding systems will be used there initially for both temperature and moisture profiles. Infrared spectrometers will eventually be used to infer moisture profiles at these boundary facilities.

4108 (BNL–47743) **Fractional activation of accumulation-mode particles in warm continental stratiform clouds.** Gillani, N.V. (Gillani (N.V.) & Associates, Inc., St. Louis, MO (United States)); Daum, P.H.; Schwartz, S.E.; Leaitch, W.R.; Strapp, J.W.; Isaac, G.A. Brookhaven National Lab., Upton, NY (United States). Jul 1991. 15p. Sponsored by USDOE, Washington, DC (United States); Electric Power Research Inst., Palo Alto, CA (United States); Canadian Inst. for Aerospace Research (Canada). DOE Contract AC02-76CH00016. (CONF-9107104–24: 5. international conference on precipitation scavenging and atmosphere surface exchange process, Richland, WA (United States), 15-19 Jul 1991). Order Number DE93001981. Source: OSTI; NTIS; INIS; GPO Dep.

The degree of activation of accumulation-mode particles (AMP) in clouds has been studied using continuous (1 second average) aircraft measurements of the number concentrations of cloud droplets (N_{cd}, 2 to 35 μm diameter) and of unactivated AMP (N_{amp}, 0.17 to 2.07 μm diameter) in cloud interstitial air. The magnitude and spatial variation of the activated fraction (F) of all measured particles (defined as $F \equiv N_{cd}/N_{tot}$, where $N_{tot} = N_{cd} + N_{amp}$) are investigated, based on measurements made during ten aircraft flights in non-precipitating warm continental stratiform clouds near Syracuse NY in the fall of 1984. Based on instantaneous observations throughout the clouds, the spatial distribution of F was found to be quite nonuniform. In general, F was low in cloud edges and where total particle loading was high and/or cloud convective activity was low. In the interior of clouds, the value of F exceeded 0.9 for 36%

of the data, but was below 0.6 for 28%. Factors influencing F the most were the total particle loading (N_{tot}) and the thermal stability of the cloud layer. The dependence of F on N_{tot} in cloud interior was characterized by two distinct regimes. For $N_{tot} < 600$ cm^{-3}, F was generally close to unity and relatively insensitive to N_{tot}. For $N_{tot} >$ 800 cm^{-3}, F tended to decrease with increasing N_{tot}. This decrease was greatest in a stable stratus deck embedded in a warm moist airmass. The results suggest that, in warm continental stratiform clouds, the process of particle activation becomes nonlinear and self-limiting at high particle loading. The degree of this nonlinearity depends on cloud convective activity (thermal instability).

4109 (BNWL-SA-4676) **Analysis of an analytical technique for distributing air sampling locations around nuclear facilities.** Waite, D.A. Pacific Northwest Lab., Richland, WA (United States). May 1973. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-730907-1: 3. international congress of the International Radiation Protection Association meeting, Washington, DC (United States), 9-14 Sep 1973). Order Number DE93000315. Source: OSTI; NTIS; GPO Dep.

A new analytical mechanism for distributing air sampling locations around nuclear facilities, including reactors, fuel fabrication, fuel reprocessing and research centers, has been devised. This method was developed to facilitate the efficient incorporation of past experiences into environmental surveillance programs for now or developing installations. The technique provides an initial distribution of air samplers around a site which correlates well with placements on sites which have been occupied by long established programs with their inherent evolution and refinements. The applicability of this approach has been examined by comparing sampling locations in well-established air monitoring programs scattered worldwide with location distributions recommended by this mechanism. Results of these comparisons will be detailed.

4110 (CLOR-121/D) **The system for measurements of radioactive contamination of environment and food in Poland.** Grabowski, D.; Kurowski, W. Centralne Lab. Ochrony Radiologicznej, Warsaw (Poland). 1990. 7p. Order Number DE93607158. Source: OSTI; NTIS (US Sales Only); INIS.

Report received in March 1992.

The service for Measurements of Radioactive Contamination comprises a network of 152 measuring stations. They are carrying out continuous measurements of gamma radiation dose rates and radioactivity measurements of 24 hours samples of air (aerosols) and total fallout. On the territory of each province there are selected points for sampling of environmental materials and food. Frequency of sampling depends on material being collected. 1 tab., 2 figs. (A.S.).

4111 (CONF-910550-, pp. 681-692) **Growth characteristics of microalgae in high-concentration CO_2 gas, effects of culture medium trace components, and impurities thereon.** Negoro, M. (Takasago Research and Development Center, Takasago (Japan)); Shioji, N.; Ikuta, Y.; Makita, T.; Uchiumi, M. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

In order to reduce release of CO_2 contained in the flue gas from a power plant, the authors assumed a system in which the flue gas was directly blown into a pond and CO_2 was fixed on microalgae. The authors have experimentally examined the basic growth characteristics, such as trace components of culture medium, effects of impurities from exhaust gas, and light utilization rate of algal productivity, mainly for Nonnochloropsis sp. NANNP-2 from SERI collection. Although Ni and V contained in heavy oil burnt ashes dissolve into culture solution, their concentrations are low, and they have no particular adverse effect on growth as impurities. Culture medium trace component (i.e., heavy metals and vitamins) are essential for the NANNP-2. However, for the PHAEO-2 (Phaeodactylum sp.), the growth rate hardly changes, even if vitamins and heavy metals other than Fe are eliminated.

4112 (CONF-9109358-, pp. 19) **Accumulation and translocation of chemicals in the Polesie Lubelskie region.** Chimielewski, T.J. (Institute of Spatial and Municipal Management, Lublin (Poland)); Pawlowski, L.; Radwan, S. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

In the literature dealing with accumulation and translocation of pollutants in the environment, of main concern are phenomena occurring in selected components of the environment (air-water, water-soil, water-sediments, soil-plants, selected plant and animal species) in the given area. The usual objects of studies are: a river, lake or water reservoirs, a partial catchment basin, a selected species or a group of species, a definite cultivation area, a selected urbanized area or its part. There are a large number a papers concerning the content and circulation of pollutants inside a single ecosystem; those dealing with accumulation and translocation of pollutants in differentiated polyecosystemic configurations, in the ecological landscape of physiocenoses are much less numerous. This paper presents a preliminary account concerning the accumulation and translocation pathways of selected chemicals in physiocenoses on the margin of two physiographic micro regions.

4113 (CONF-930133-2) **The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data.** Vose, R.S. (Oak Ridge National Lab., TN (United States)); Schmoyer, R.L.; Peterson, T.C.; Steurer, P.M.; Heim, R.R. Jr.; Karl, T.R.; Eischeid, J.K. Oak Ridge National Lab., TN (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 73. American Meteorological Society (AMS) annual meeting; Anaheim, CA (United States); 17-22 Jan 1993. Order Number DE92041261. Source: OSTI; NTIS; INIS; GPO Dep.

Interest in global climate change has risen dramatically during the past several decades. In a similar fashion, the number of data sets available to study global change has also increased. Unfortunately, many different organizations and researchers have compiled these data sets, making it confusing and time consuming for individuals to acquire the most comprehensive data. In response to this rapid growth in the number of global data sets, DOE's Carbon Dioxide Information Analysis Center (CDIAC) and NOAA's National Climatic Data Center (NCDC) established the Global Historical Climatology Network (GHCN) project. The purpose of this project is to compile an improved data set of long-term monthly mean temperature, precipitation, sea level pressure, and station pressure for as dense a network of global stations as possible. Specifically, the GHCN project seeks to consolidate the numerous preexisting national-, regional-, and global-scale data sets into a single global data base; to subject the data to rigorous quality control; and to update, enhance, and distribute the data set at regular intervals. The purpose of this paper is to describe the compilation and contents of the GHCN data base (i.e., GHCN Version 1.0).

4114 (DOE/ER-0565T) **Global change research: Summaries of research in FY 1992.** USDOE Office of Energy Research, Washington, DC (United States). Office of Health and Environmental Research. Oct 1992. 196p. Sponsored by USDOE, Washington, DC (United States). Order Number DE93002859. Source: OSTI; NTIS; GPO Dep.

Greenhouse gases result from both natural and man-made processes and include carbon dioxide (CO_2), nitrogen oxides (N_xO_y), methane, chlorofluorocarbons, halogenated compounds, water vapor, and others. Since the industrial revolution, the atmospheric concentrations of several greenhouse gases have been increasing, primarily because of human activities. These increases have the potential to cause global climate change through increased radiative forcing. Global climate change is a significant issue for the Department of Energy (DOE) because energy production and use now contribute more than half of the total man-made emissions of greenhouse gases on a global basis. The missions of the Department's Global Change Research Program are: To predict the future atmospheric concentrations of CO_2 and other energy-related greenhouse gases; to predict the future and magnitude of potential

climate change caused by the enhanced greenhouse effect; to understand both the direct impacts of greenhouse-gas emissions on biota and the indirect consequences produced by climate change; to assess the impacts of global climate change on energy systems and energy demand; and to develop and assess the potential of mitigation and adaptation technologies and practices to offset or limit the impact of any potential climate change or to facilitate natural and societal adjustment to the environmental, social, and economic consequences of global climate changes. The information produced by these activities is necessary in order to assess the economic and environmental costs and benefits of both potential climate change caused by the effects of greenhouse gases and implementing different technologies and energy-policy options aimed at preventing, mitigating, or adapting to such change. This document describes the activities and products of the Global Change Research Program in FY 1992.

4115 (DOE/ER/13838–5) **Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows: Progress report, February 1, 1992–January 31, 1993.** Bernard, P.S.; Wallace, J.M.; Balint, J.L. Maryland Univ., College Park, MD (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER13838. Order Number DE93002794. Source: OSTI; NTIS; GPO Dep.

Laboratory experiments and direct numerical simulations (DNS) of passive scalar contaminant disperal in bounded shear flows have been carried out. Several modifications to the laboratory windtunnel have been carried out which will make possible laser sheet flow visualization along the whole length of the 8m test section. Backward particle paths needed to perform a Lagrangian analysis of scalar transport are in the process of being computed for each of the numerical data sets previously described. A light sheet system is being implemented which is capable of visualizing a 30cm X 30cm X 5cm portion of the wall layer in order to extract quantitative information about the structure of the scalar plumes.

4116 (DOE/ER/60397–6) **Detection of greenhouse-gas-induced climatic change: Progress report, 1 December 1991–30 June 1992.** Wigley, T.M.L.; Jones, P.D. East Anglia Univ., Norwich (United Kingdom). Climatic Research Unit. 15 Jul 1992. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER60397. Order Number DE93003149. Source: OSTI; NTIS; INIS; GPO Dep.

The aims of the US Department of Energy's Carbon Dioxide Research Program are to improve assessments of greenhouse-gas-induced climatic change and to define and reduce uncertainties through selected research. This project will address: The regional and seasonal details of the expected climatic changes; how rapidly will these changes occur; how and when will the climatic effects of CO_2 and other greenhouse gases be first detected; and the relationships between greenhouse-gas-induced climatic change and changes caused by other external and internal factors. The present project addresses all of these questions. Many of the diverse facets of greenhouse-gas-related climate research can be grouped under three interlinked subject areas: modeling, first detection and supporting data. This project will include the analysis of climate forcing factors, the development and refinement of transient response climate models, and the use of instrumental data in validating General Circulation Models (GCMs).

4117 (DOE/ER/60485–4) **Natural and anthropogenic climate change: Progress report, [September 1, 1991–March 31, 1992].** Ko, M.K.W. (Atmospheric and Environmental Research, Inc., Cambridge, MA (United States)); Clough, S.A.; Molnar, G.I.; Iacono, M.; Wang, W.C. Atmospheric and Environmental Research, Inc., Cambridge, MA (United States). Mar 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER60485. Order Number DE93003150. Source: OSTI; NTIS; INIS; GPO Dep.

This report consists of two parts: (1) progress for the period 9/1/91–3/31/92 and (2) the plan for the remaining period 4/1/92–8/31/92. The project includes two tasks: atmospheric radiation and improvement of climate models to evaluate the climatic effects of radiation changes. The atmospheric radiation task includes four subtasks: (1) Intercomparison of Radiation Codes in Climate Models (ICRCCM), (2) analysis of the water vapor continuum using line-by-line calculations to develop a parameterization for use in climate models, (3) parameterization of longwave radiation and (4) climate/radiation interactions of desert aerosols. Our effort in this period is focused on the first three subtasks. The improvement of climate models to evaluate the subtasks: (1) general circulation model study and (2) 2- D model development and application.

4118 (DOE/ER/61062–T1) **[Multifractal cloud properties data assessment].** Gautier, C. (California Univ., Santa Barbara, CA (United States)); Ricchiazzi, P.; Peterson, P.; Lavallee, D.; Frouin, R.; Lubin, D.; Lovejoy, S.; Schertzer, D. California Univ., Santa Barbara, CA (United States). 6 May 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-90ER61062. Order Number DE93002638. Source: OSTI; NTIS; GPO Dep.

Our group has been very active over the last year, analyzing a number of data sets to characterize multifractal cloud properties and assess the effects of clouds on surface radiation properties (spectral and broadband). The data sets analyzed include: AVHRR observations of clouds over the ocean, SPOT observations of clouds over the ocean, SSM/I observations of clouds over the ocean, pyranometer data with all-sky photographs, pyrgeometer data all-sky photographs, and spectral surface irradiance all-sky photographs. A number of radiative transfer computations have been performed to help in the interpretation of these observations or provide theoretical guidance for their analysis. Finally 4 number of radiative transfer models have been acquired and tested to prepare for the interpretation of ARM/CART data.

4119 (DOE/ER/61364–1) **Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations: Technical progress report, 1 December 1991–30 November 1992.** Walcek, C.J. State Univ. of New York, Albany, NY (United States). Atmospheric Sciences Research Center. 30 Oct 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER61364. Order Number DE93003245. Source: OSTI; NTIS; GPO Dep.

This research program utilizes satellite and surface-derived cloud observations together with standard meteorological measurements to evaluate and improve our ability to accurately diagnose cloud coverage. Results are to be used to compliment existing or future parameterizations of cloud effects in general circulation models, since nearly all cloud parameterizations must specify a fractional area of cloud coverage when calculating radiative or dynamic cloud effects, and current parameterizations rely on rather crude cloud cover estimates. We have compiled and reviewed a list of formulations used by various climate research groups to specify cloud cover. We find considerable variability between formulations used by various climate and meteorology models, and under some conditions, one formulation will produce a zero cloud amount, while an alternate formulation calculates 95% cloud cover under the same environmental conditions. All formulations hypothesize that cloud cover is predominantly determined by the average relative humidity, although some formulations allow local temperature lapse rates and vertical velocities to influence cloud amount.

4120 (DOE/ER/61365–1) **ARM Fourier transform spectrometer data analysis tools.** Smith, W.L. Wisconsin Univ., Madison, WI (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER61365. Order Number DE93004648. Source: OSTI; NTIS; GPO Dep.

This is the first year mid-term report. Ground-based meteorological field experiments similar to AERI, are serving as the data base for the development of analysis tools sprior to AERI installation at the ARM CART site: SPETRE, STORMFEST, and Pt Sur 92. Objectives are to improve infrared radiative transfer models under clear and cloud conditions, develop a method of inferring effective cloud optical properties from FTIR observations, model effects of cloud properties on radiative properties for interpreting FTIR observations and developing remote sensing, develop a classification method for spectral radiances for atmospheric radiative transfer studies, and develop algorithms for retrieving temperature and constituent profiles from FTIR. 3 figs.

4121 (DOE/ER/69017–4) **Diagnostic studies of climate variability: Annual report, December 1, 1991–November 30,**

1992. Bradley, R.S. (Massachusetts Univ., Amherst, MA (United States)); Diaz, H.F. Massachusetts Univ., Amherst, MA (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER69017. Order Number DE93002837. Source: OSTI; NTIS; GPO Dep.

This paper reports on the progress on the first year of the diagnostic studies of climate variability project. The objectives were as follows: to initiate studies of long-term climatic variability, using long instrumental data sets, and proxy records; to examine regional changes of temperature and precipitation over the past century in relation to changes at the hemispheric and global scale; and to produce a map-based archive of monthly and seasonal temperature, precipitation and pressure data fore display on PCs. Significant progress has been made in all of these areas. This paper summarizes results of the work accomplished. Part A summarizes results of the work accomplished. Part A summarizes the work accomplished primarily at the University of Massachusetts. Part B summarizes work primarily conducted at NOAA/ERL. A list of papers published, in press, or in preparation then follows. Appendix 1 is a description of the proposed research in 1992–93, and a proposed budget.

4122 (DOE/NV/10594–T2) **A guide to archival collections relating to radioactive fallout from nuclear weapon testing: Ninth edition.** Martin, B.W. (ed.). History Associates, Inc., Rockville, MD (United States). Sep 1992. 98p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-87NV10594. Order Number DE93000909. Source: OSTI; NTIS; INIS; GPO Dep.

This ninth edition of A Guide to Archival Collections Relating to Radioactive Fallout from Nuclear Weapon Testing constitutes History Associates Incorporated's (HAI) final report of its document collection, processing, and declassification efforts for the Nevada Field Office of the Department of Energy. The most significant feature of this edition is the updated HAI collection effort information. We confirmed the accuracy of this information using our screening, processing, and transmittal records. Unlike previous editions, funding limitations prevented us from systematically revising the collection descriptions and point-of-contact information for this final edition. This guide has been prepared by professional historians who have a working knowledge of many of the record collections included in the following pages. In describing materials, they have tried to include enough information so that persons unfamiliar with the complexities of large record systems will be able to determine that nature of the information in, and the quality of, each record collection.

4123 (DOE/NV/10630–37) **Operational air sampling report, July–December 1991.** Lyons, C.L. Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (United States). Nov 1992. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-89NV10630. Order Number DE93003155. Source: OSTI; NTIS; INIS; GPO Dep.

Air sampling is one of the more useful ways of assessing the effectiveness of operational radiation safety programs at the Nevada Test Site (NTS). Air sampling programs document NTS airborne radionuclide concentrations in various work locations and environments. These concentrations generally remain well below the Derived Air Concentration (DAC) values prescribed by the Department of Energy (DOE 5480.11, Attachment 1) or the Derived Concentration Guide (DCG) values prescribed by the Department of Energy DOE 5400.5, Chapter III. The Defense Nuclear Agency (DNA) tunnel complexes, Area 12 Test Support Compound and the Area 6 Decontamination Pad and Laundry air sampling programs are summarized in this report. Evaluations are based on Analytical Services Department (ASD) Counting Laboratory analyses and Health Protection Department (HPD)/Radiological Field Operations Section (RFOS) radiation protection technician's (RPT) or health physicists' calculations for air samples collected July 1 through December 31, 1991. Of the NTS operational air sampling programs in the tunnel complexes, the initial mining and event reentry and recovery operations represent the only real airborne radioactive inhalation potentials to personnel. Monthly filter and scintillation cell samples were taken and counted in RDA-200 Radon Detectors to document working levels of radon/thoron daughters and picocurie/liter (PCVL) concentrations of radon gas. Weekly Drierite samples for tritium analysis were taken in the active tunnel complexes to document any changes in normal background levels or reentry drifts as they are advanced toward ground zero (GZ) areas. Underground water sources are considered primary transporters of tritium from old event areas.

4124 (DOE/NV/10630–42) **Operational air sampling report, January–June 30, 1992.** Lyons, C.L. Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (United States). Sep 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-89NV10630. Order Number DE93004380. Source: OSTI; NTIS; INIS; GPO Dep.

Nevada Test Site postshot and tunnel events generate beta/gamma fission products. The Reynolds Electrical & Engineering Co., Inc. air sampling program is designed for measurement of these radionuclides at various facilities supporting these events. Monthly radon sampling is done for documentation of working levels in the tunnel complexes, which would be expected to hove the highest radon levels for on-site facilities. Out of a total of 281 air samples taken in the tunnel complexes, 25 showed airborne fission products with concentrations well below their respective Derived Air Concentrations (DAC). All of these were related to event reentry or mineback operations. Tritiated water vapor and radon levels were very similar to previously reported levels. The 975 air samples taken at the Area-6 decontamination bays and laundry were again well below any DAC calculation standard and negative for any airborne fission products from laboratory analyses.

4125 (DPST–87-341) **Average wind statistics for SRP area meteorological towers.** Laurinat, J.E. Du Pont de Nemours (E.I.) and Co., Aiken, SC (United States). Savannah River Lab. 29 Jun 1987. 82p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035 ;AC09-76SR00001. Order Number DE93000592. Source: OSTI; NTIS; INIS; GPO Dep.

A quality assured set of average wind Statistics for the seven SRP area meteorological towers has been calculated for the five-year period 1982–1986 at the request of DOE/SR. A Similar set of statistics was previously compiled for the years 1975– 1979. The updated wind statistics will replace the old statistics as the meteorological input for calculating atmospheric radionuclide doses from stack releases, and will be used in the annual environmental report. This report details the methods used to average the wind statistics and to screen out bad measurements and presents wind roses generated by the averaged statistics.

4126 (ECN-RX–92-025) **CO_2 removal in competition with other options for reducing CO_2 emissions.** Okken, P.A.; Lako, P.; Gerbers, D.; Kram, T.; Ybema, J.R. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Jun 1992. 16p. (In Dutch). Order Number DE92557266. Source: OSTI; NTIS (US Sales Only).

Paper presented at the First International Conference on Carbon Dioxide Removal, Amsterdam (Netherlands), 4-6 March 1992.

CO_2 reduction scenarios are calculated with the MARKet ALlocation model (MARKAL) in a bottom-up analysis of the evolution of the Netherlands energy system for the period 2000-2040. In these calculations moderate fuel price increases, stringent environmental constraints, steady improvements in energy efficiency and major energy alternatives are taken into account. Preliminary results indicate a strong potential for CO_2 removal from fossil fuels in combination with electricity and hydrogen production, at severe CO_2 emission constraints. 5 figs., 3 tabs., 9 refs.

4127 (EGG–10617-1082) **An aerial radiological survey of the Brookhaven National Laboratory and surrounding area, Upton, New York: Date of survey: March 1990.** EG and G Energy Measurements, Inc., Las Vegas, NV (United States). Remote Sensing Lab. Sep 1992. 27p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-88NV10617. Order Number DE93003328. Source: OSTI; NTIS; INIS; GPO Dep.

An aerial radiological survey was performed from March 21 to March 24, 1990, over approximately a 65-square-kilometer (25-square-mile) area surrounding the Brookhaven National Laboratory (BNL) which is located at the center of Suffolk County, Long Island, New York. All gamma radiation data were collected flying

east-west lines spaced 76 meters (250 feet) apart at an altitude of 46 meters (150 feet) above ground level (AGL). Count rates obtained from the aerial platform were converted to exposure rates at 1 meter above the ground. The typical terrestrial-plus-cosmic background exposure rate in the survey area ranged from 5 to 10 microroentgens per hour (μR/h). The reported exposure rate values include an estimated cosmic ray contribution of 3.6 μR/h. Ground-based measurements made two weeks later were compared to the aerial survey results. Pressurized ion chamber readings, soil samples, and in situ high purity germanium measurements were taken from 54 locations within the survey area. Exposure rate values obtained from these measurements were in general agreement with those obtained from the aerial data. A total of 16 areas of man-made radioactivity were identified within the survey boundary. The dominant man-made radioisotopes found were cesium-137, sodium-22, manganese-54, cobalt-58, and cobalt-60. The BNL was previously surveyed in June 1983 and May 1980. The results of the present survey are in good agreement with the results of the previous surveys.

4128 (EGG–10617-1150) **HGSYSTEM: Dispersion models for ideal gases and hydrogen fluoride tutorial and quick reference guide.** Witlox, H.W.M. (Shell Research Ltd., Chester (United Kingdom). Thornton Research Centre). EG and G Energy Measurements, Inc., Las Vegas, NV (United States); Industry Cooperative Hydrogen Fluoride Mitigation/Assessment Program (United States). Ambient Impact Assessment Subcommittee; Shell Research Ltd., Chester (United Kingdom). Thornton Research Centre. May 1991. 232p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-88NV10617. Order Number DE93000952. Source: OSTI; NTIS (documentation only); ESTSC (complete software package), P.O. Box 1020, Oak Ridge, TN 37831-1020; GPO Dep.

The thermodynamic behavior of hydrogen fluoride when diluted with air, particularly moist air, is very different from that of a simple ideal gas. The gas-air mixture can, depending on conditions, be denser than ambient air or substantially less dense than air. This behavior of an HF cloud would have a major influence on the dispersion behavior of HF in the atmosphere if it were released accidentally. For gases such as LNG thermodynamic effects must be included in dispersion models in order to accurately simulate such releases. Because of the unique thermodynamic properties of HF, it was felt that those properties would be important in accurately simulating an HF release. This program identified three major areas in which substantial uncertainties existed in previous models: (1) the modeling of the complex thermodynamics of HF/H_2O/Air mixtures (including aerosol effects on cloud density); (2) the treatment of a wide range of surface roughness conditions (including possible multiple surface roughness conditions) and (3) jet flow and air entrainment for pressurized releases of HF, followed by transition to ground-based dense gas dispersion. Major objectives of this study were to develop and validate computer-based models to calculate the release properties in addition to simulating jet and plume behavior downwind of an accidental release of HF. This report serves as a guide to the installation and operation of the HGSYSTEM model.

4129 (EGG–10617-1152) **Development and validation of atmospheric dispersion models for ideal gases and hydrogen fluoride: Part 2, HGSYSTEM program user's manual.** Witlox, H.W.M.; McFarlane, K.; Rees, F.J.; Puttock, J.S. EG and G Energy Measurements, Inc., Las Vegas, NV (United States); Industry Cooperative Hydrogen Fluoride Mitigation/Assessment Program (United States). Ambient Impact Assessment Subcommittee; Shell Research Ltd., Chester (United Kingdom). Thornton Research Centre. Nov 1990. 538p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-88NV10617. Order Number DE93000954. Source: OSTI; NTIS (documentation only); ESTSC (complete software package), P.O. Box 1020, Oak Ridge, TN 37831-1020; GPO Dep.

The thermodynamic behavior of hydrogen fluoride when diluted with air, particularly moist air, is very different from that of a simple ideal gas. The gas-air mixture can, depending on conditions, be denser than ambient air or substantially less dense than air. This behavior of an HF cloud would have a major influence on the dispersion behavior of HF in the atmosphere if it were released accidentally. For gases such as LNG thermodynamic effects must be included in dispersion models in order to accurately simulate such releases. Because of the unique thermodynamic properties of HF, it was felt that those properties would be important in accurately simulating an HF release. This program identified three major areas in which substantial uncertainties existed in previous models: (1) the modeling of the complex thermodynamics of HF/H_2O/Air mixtures (including aerosol effects on cloud density); (2) the treatment of a wide range of surface roughness conditions (including possible multiple surface roughness conditions) and (3) jet flow and air entrainment for pressurized releases of HF, followed by transition to ground-based dense gas dispersion. Major objectives of this study were to develop and validate computer-based models to calculate the release properties in addition to simulating jet and plume behavior downwind of an accidental release of HF. This report is the HGSYSTEM Program User's Manual.

4130 (ETDE-mf–93728814) **Results of the ozone measurements carried out near to the ground in the first half year 1991.** Sonderbeobachtungen des Meteorologischen Observatoriums Hohenpeissenberg. Deutscher Wetterdienst, Hohenpeissenberg (Germany). Meteorologisches Observatorium. 1992 162p. (In German). Order Number DE93728814. Source: OSTI; NTIS (US Sales Only).

The report of the first half of 1991 contains tables and diagrams with the data of ozone measurements carried out near to the ground as well as the general ozone and sulphure dioxide measurements made by the Hohenpeissenberg station. The tables on ozone soundings also give the air pressure and temperature for any height of measurement. (orig.).

4131 (GKSS–92/E/12) **Turbulence modeling for flow with helicity.** Cieszelski, R. (GKSS, Inst. fuer Physik, Geesthacht (Germany)). GKSS-Forschungszentrum Geesthacht GmbH, Geesthacht-Tesperhude (Germany). 1992. 142p. (In German). Order Number DE93728907. Source: OSTI; NTIS (US Sales Only).

To improve the vortex conservation of grid point models applied in meteorology, energy and helicity conservation is taken into account for subgrid turbulence modelling. For the mean flow equations the 'Ansatz' of Lautenschlager, Eppel and Thacker (1988) is used, who takes into account the influence of turbulent kinetic energy and helicity. The subgrid scale model keeps the prognostic equation of turbulent kinetic energy (TKE) and in addition the equation of turbulent helicity; it is called TKEH-model. Two examples of simulation using TKEH-modelling show improved vortex conservation in comparison to diffuse TKE-modelling. On one hand the simulated decay of a barotropic tropical cyclone segment is slowed down. On the other hand, TKEH-modelling stabilizes the rotation of simulated thermals. (orig.) With 15 figs., 10 tabs.

4132 (INIS-mf–13376, pp. 57) **Central Laboratory for Radiological Protection in Warsaw about contamination level in Poland in March 1990: Statement.** National Atomic Energy Agency, Warsaw (Poland); Centralne Lab. Ochrony Radiologicznej, Warsaw (Poland). Apr 1990. 60p. (In Polish). In *Four years after nuclear power plant accident at Chernobyl.* Order Number DE93607099. 4133 (INIS-mf–13379) **Radon quantification in dwellings of different construction located in Pichincha Province.** Ayala, Maria Mercedes (Universidad Central de Ecuador, Facultad de Ciencias Fisicas y Matematicas, Escuela de Ingenieria Quimica Quito, (Ecuador)). Universidad Central del Ecuador, Quito (Ecuador). 1992 166p. (In Spanish). Order Number DE93607159. Source: OSTI; NTIS (US Sales Only); INIS.

The desintegration of uranium-238 yields radon-222 present in most dwellings and buildings. Radon-222 gets into them, accumulatively, through floors and walls, domestic fuel-gas and drinking water pipes. Upon inhalation radon is cancer's causes, death-rate being about 5000 deaths per year in USA. This fact evidences the

necessity to quantifying radon in dwellings in Ecuador. This research involves data from dwellings built up with different types of raw materials found spread in Pichincha province. The SSNTD method using a cellulose nitrate sensible film LR-115 was used for the research. The incidence of temperature, altitude, ventilation on the concentration gas Rn^{222} were also subject of a qualitative study. Eventually, the results shows that the adobe dwellings and/or poorly ventilated dwellings produce maximum concentration of Rn^{222}. Some cases show that ground floors have higher rate of Rn^{222} than the first or second floors, meaning that the gas is also coming up from the ground. in any case the level of Rn^{222} concentration is less than accepted limit 200 Bq/m^3 by UNCEAR only places, such as Mindo and Calderon, surpass the limit.

4134 (KFK-PEF–80-Vol.1, pp. 1-25) **Efficient strategies for air pollution control in Baden-Wuerttemberg.** Voss, A. (Stuttgart Univ. (Germany). Inst. fuer Energiewirtschaft und Rationelle Energieanwendung (IER)); Friedrich, R.; Obermeier, A. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

Damage to forests in Europe, increasing ozone-levels in the troposphere, ozone depletion in the stratosphere, respiratory deseases, acidification of lakes and other environmental damages are at least partly coused by air pollution. Reduction of emissions of pollutants as a means of environmental protection results in additional expenditure, which adds up to annual costs of several billions of DM/year. Maximum reduction of emission with least additional costs is therefore an important policy objective. In this contribution some research activities are summarized, their results giving an important support of political decision-makers with regard to the realization of efficient air pollution control strategies in Baden-Wuerttemberg. Further developments of methods and systems analysis required, as well as future tasks will be discussed additionally. (orig./UWA).

4135 (KFK-PEF–80-Vol.1, pp. 295-308) **Experiment with exclusion of gaseous pollutants on spruce trees at Edelmannshof. Pt. A. Chamber operation (results of investigation on climate and air chemistry).** Evers, F.H. (FVA Baden-Wuerttemberg, Freiburg im Breisgau (Germany)); Hoyer, V.; Schnepf, M.; Seufert, G. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

In winter 1989/90 SO_2-pollution at Edelmannshof was extremely low caused by mild climate with high temperature and few freeze. The level of ozone with 94,5 $\mu m/m^3$ in summer 1990 and monthly averages up to 128 $\mu m/m^3$ was raised in comparision to 1989. Since starting monitoring of air pollution at Edelmannshof in 1984 the level of ozone annually went up continuously and increased about 75%. The climate of 1989 and 1990 featured of mild winters and draught in summers caused water shortage for the the investigated spruces. The investigation on site conditions shows only slight differences between chambers and ambient on temperature or relative humidity. In the chambers the potential evaporation is reduced with regard to the ambient. Further investigations on chamber climate confirm the already presented results. Even on high immission concentrations the exclusion rate in chambers with charcoal filtered air was more than 75% in comparision with ambient air. (orig./UWA).

4136 (KFK-PEF–92) **Development of a decision support system for emission reduction and emission control technologies.** Hillenbrand, R. (Karlsruhe Univ. (T.H.) (Germany). Inst. fuer Industriebetriebslehre und Industrielle Produktion (IIP)); Hackenberg, D.; Rentz, O. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). May 1992. 154p. (In German). Contract PEF 89/001/4162. Order Number DE93728957. Source: OSTI; NTIS (US Sales Only).

The Baden-Wuerttemberg Government Committee "Economic Development, Environment and Industrial Production" (Wirtschaftliche Entwicklung, Umwelt und Industrielle Produktion) has recommended that the development of the state-of-the-art in emission reduction should be documented and made accessible by a modern information system for control technologies. Within this project a decision support system for selection and evaluation of emission control technologies was developped, which was programmed on personal computer and integrated in the information system TEMITEC. This system helps potential users respectively operators of environmental technologies selecting adequate processes. Considering their specific combustion requirements emission control measures for dedusting, desulphurization and denitrification at stationary combustion units for steam production in the competence of the German TA Luft are selected. This project was carried out in cooperation with a group of test users and the work group "Flue Gas Cleaning Data Bank (DABARA)" under the overall control of the Ministry of Environment from the State Baden-Wuerttemberg. (orig.) With 21 figs., 3 tabs., 195 refs.

4137 (LA-UR–92-3030) **Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data.** Kao, C.Y.J. Los Alamos National Lab., NM (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-930142–1: 4. American Meteorological Society (AMS) symposium on global change studies, Anaheim, CA (United States), 14-19 Jan 1993). Order Number DE93000678. Source: OSTI; NTIS; INIS; GPO Dep.

It is well recognized that extended sheets of low-level stratus and stratocumulus clouds are a persistent feature over the eastern parts of the major ocean basins associated with the quasipermanent subtropical high-pressure systems. These clouds exert a strong influence on climate through their high albedo, compared with the underlying surface, and their low altitude. The former leads to a reduction of the net incoming shortwave flux into the atmosphere and the latter leads to an infrared loss in a way essentially the same as the cloud-free conditions. Randall et al.[1984] estimated that an increase of a few percent of global low-level stratiform clouds may offset the warming caused by a doubling of the atmos-pheric CO_2. The Atmospheric Radiation Measure-ment (ARM) Program, sponsored by the US Department of Energy, is envisioning a locale in the Eastern North Pacific for extensive measure-ments of stratiform boundary-layer clouds and their interaction with atmospheric radiation. Thus, a physically-based parameterization sheme for marine low-level stratiform clouds can be developed for general circulation models (GCMs). This paper is a modeling study with the current understanding of the important physical processes associated with a cloud-capped boundary layer. The numerical model is a high-resolution one-dimensional version of the second-order turbulence convective/radiative model developed at the Los Alamos National Laboratory.

4138 (LA-UR–92-3170) **Ambient air monitoring for organic compounds, acids, and metals at Los Alamos National Laboratory, January 1991.** Williams, C.H. (Radian Corp., Austin, TX (United States)); Eberhart, C.F. Los Alamos National Lab., NM (United States). [1992]. 139p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93000860. Source: OSTI; NTIS; INIS; GPO Dep.

Los Alamos National Laboratory (LANL) contracted Radian Corporation (Radian) to conduct a short-term, intensive air monitoring program whose goal was to estimate the impact of chemical emissions from LANL on the ambient air environment. A comprehensive emission inventory had identified more than 600 potential air contaminants in LANL's emissions. A subset of specific target chemicals was selected for monitoring: 20 organic vapors, 6 metals and 5 inorganic acid vapors. These were measured at 5 ground level sampling sites around LANL over seven consecutive days in

January 1991. The sampling and analytical strategy used a combination of EPA and NIOSH methods modified for ambient air applications.

4139 (LBL–32665) **Carbon emissions and sequestration in forests: Case studies from seven developing countries: Volume 4: Mexico: Draft.** Makundi, W. (Lawrence Berkeley Lab., CA (United States)); Sathaye, J. (eds.); Cerutti, O.M.; Ordonez, M.J.; Minjarez, R.D. Lawrence Berkeley Lab., CA (United States); Environmental Protection Agency, Washington, DC (United States). Aug 1992. 55p. Sponsored by Environmental Protection Agency, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE93001599. Source: OSTI; NTIS; GPO Dep.

Estimates of carbon emissions from deforestation in Mexico are derived for the year 1985 and for two contrasting scenarios in 2025. Carbon emissions are calculated through an in-depth review of the existing information on forest cover deforestation mtes and area affected by forest fires as well as on forests' carbon-related biological characteristics. The analysis covers both tropical – evergreen and deciduous – and temperate – coniferous and broadleaf – closed forests. Emissions from the forest sector are also compared to those from energy and industry. Different policy options for promoting the sustainable management of forest resources in the country are discussed. The analysis indicates that approximately 804,000 hectares per year of closed forests suffered from major perturbations in the mid 1980's in Mexico, leading to an annual deforestation mte of 668,000 hectares. Seventy five percent of total deforestation is concentrated in tropical forests. The resulting annual carbon balance is estimated in 53.4 million tons per year, and the net committed emissions in 45.5 million tons or 41% and 38%, respectively, of the country's total for 1985–87. The annual carbon balance from the forest sector in 2025 is expected to decline to 16.5 million tons in the low emissions scenario and to 22.9 million tons in the high emissions scenario. Because of the large uncertainties in some of the primary sources of information, the stated figures should be taken as preliminary estimates.

4140 (PNL–8149) **Hanford Site environmental data for calendar year 1991: Surface and Columbia River.** Bisping, L.E.; Woodruff, R.K. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 440p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93003339. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental monitoring at the Hanford Site, located in southeastern Washington State, is conducted by Battelle Memorial Institute, Pacific Northwest Division, as part of its contract to operate the Pacific Northwest Laboratory (PNL) for the US Department of Energy. Pacific Northwest Laboratory publishes an annual environmental report for the Hanford Site each calendar year. This report is a summary of offsite and onsite environmental monitoring data collected during 1991 by PNL's Environmental Monitoring Program. The data summaries included in the annual report were created from individual surface and river monitoring results. This volume contains the individual results used to create those summaries. This volume also includes selected additional data summaries that do not appear in the annual report.

4141 (PNL-SA–20711) **Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter.** Whiteman, C.D.; Allwine, K.J. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9209173–3: 22. International conference on alpine meteorology, Toulouse (France), 7-11 Sep 1992). Order Number DE93001558. Source: OSTI; NTIS; GPO Dep.

In winter, deep temperature inversions build up over the floor (~1150 m MSL) of the Colorado Plateaus Basin to the level of the mountain barrier on the basin's western edge (2000–2400 m MSL). During daytime, a convective boundary layer (CBL) grows upward into the base of this inversion from the basin floor. Winter daytime values of sensible heat flux are too small to break the inversion, and the CBL typically grows to depths of only 400–600 m AGL. Nighttime downward sensible heat fluxes extract more heat from the atmosphere than is gained by the atmosphere during daytime, so that the basin inversion persists over long periods and is destroyed only by passing synoptic-scale disturbances. Basin winds are usually weak, and recirculations are frequent feature within the basin. Surface flows in the region are often counter to valley wind theory, due to unusual topography in which the prevailing terrain slope is counter to the direction of flow of the Colorado River.

4142 (PNL-SA–20898) **Wintertime meteorology of the Grand Canyon region.** Whiteman, C.D. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9209163–3: 6. American Meteorological Society conference on mountain meteorology, Portland, OR (United States), 29 Sep - 2 oct 1992). Order Number DE93001557. Source: OSTI; NTIS; GPO Dep.

The Grand Canyon region of the American Southwest is an interesting region meteorologically, but because of its isolated location, the lack of major population centers in the region, and the high cost of meteorological field experiments, it has historically received little observational attention. In recent years, however, attention has been directed to episodes of visibility degradation in many of the US National parks, and two recent field studies focused on this visibility problem have greatly increased the meteorological data available for the Grand Canyon region. The most recent and comprehensive of these studies is the Navajo Generating Station Winter Visibility Study of 1989–90. This study investigated the sources of visibility degradation in Grand Canyon National Park and the meteorological mechanisms leading to low visibility episodes. In this paper we present analyses of this rich data set to gain a better understanding of the key wintertime meteorological features of the Grand Canyon region.

4143 (PNL-SA–20899) **Single-station integral measures of atmospheric stagnation, ventilation, and recirculation.** Allwine, K.J.; Whiteman, C.D. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9209163–2: 6. American Meteorological Society conference on mountain meteorology, Portland, OR (United States), 29 Sep - 2 oct 1992). Order Number DE93001554. Source: OSTI; NTIS; GPO Dep.

In air pollution work, terms such as stagnation, ventilation, and recirculation have come to be used to indicate special types of flow conditions that produce important effects on the dispersion of air pollutants. Stagnations are events where atmospheric flows decrease in speed, or stop altogether, allowing pollutants to build up in stagnant air in the vicinity of the pollutant sources. Ventilations, on the other hand, are events in which a confined polluted air mass is driven away and replaced by fresh air. Finally, a recirculation is an event in which polluted air is initially carried away from the source region but later returns to produce a high pollution episode. The three terms, when used in air pollution work, are often used in a general sense, but rarely are defined mathematically to allow a numerical evaluation of the flow character. In the present work we develop mathematical definitions of these terms by focusing directly on the relevant atmospheric transport conditions, irrespective of pollution levels. The mathematical definitions of several single- station integral quantities representative of stagnation, ventilation, and recirculation are described, and the approach is applied to a wind data et from a radar profiler at Page, Arizona.

4144 (PNL-SA–21231) **Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer.** Shaw, W.J.; Doran, J.C.; Hubbe, J.M. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830 ;W-31109-ENG-38 ;W-7405-ENG-36. (CONF-9209158–5: 10. symposium on turbulence and diffusion, Portland, OR (United States), 29 Sep - 2 oct 1992). Order Number DE93001515. Source: OSTI; NTIS; GPO Dep.

Defining the nature of turbulent transfer over horizontally inhomogeneous surfaces remains one of the challenges in meteorology. Because the transfer of energy and momentum through the atmospheric boundary layer forms part of the lower boundary condition for global climate models (GCMs), the problem is important. Over the last two decades, advances in sensor and computer technology wave made good point measurements of turbulent fluxes fairly routine. A fundamental question with respect to climate models,

however, is how such point measurements are related to average fluxes over the area of a GCM grid box. In this paper we will use data from the field program to depict the evolution of the boundary layer over adjacent, sharply contrasting surface types on two separate occasions. We will then use simple scaling based on the observations to argue that sub-gridscale motions would often be likely to significantly alter the estimates and resulting parameterizations of GCM-scale surface fluxes in the region.

4145 (PTB-Ra–30) **Radionuclide concentration in ground-level air in 1991 in North Germany.** Kolb, W.; Wershofen, H. Physikalisch-Technische Bundesanstalt, Braunschweig (Germany). Radioaktivitaet. Mar 1992. 22p. Order Number DE93728836. Source: OSTI; NTIS (US Sales Only); INIS.

The activity concentration of various fission products and some other radionuclides (e.g. Be-7, Na-22, K-40 and Pb-210) contained in ground-level air were determined by gamma-ray spectroscopy. Weekly and mean monthly activity concentrations measured in Brunswick and Berlin are tabulated. From 1990 to 1991 the Cs-137 concentration in Brunswick decreased only slightly. It was less than 0.1% of that in 1986 but due to resuspended soil dust still three times higher than in 1985. Occasionally, traces of activation products were detected such as Cr-51, Mn-54 or Co-60 in Januray and February in Brunswick and Berlin. The effective equivalent dose due to the inhalation of fission products is estimated to be less than 0.1% of the Pb-210 inhalation dose. (orig.).

4146 (UCRL-ID–112135) **An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution.** Molenkamp, C.R. Lawrence Livermore National Lab., CA (United States). Oct 1992. 43p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93003333. Source: OSTI; NTIS; GPO Dep.

The effect of aerosol particle size distribution on the transfer of solar and infrared radiation in the Atmosphere is investigated by calculating radiances using LOWTRAN 7. We show that measurable changes occur in downward direct and scattered solar radiance for a background rural aerosol as the mode radius and standard deviation are changed. Aerosols with particles primarily larger than 0.5 μm have fairly uniform effects at visible wavelengths, while aerosols with particles mainly smaller than 0.1 μm scatter more sunlight as the wavelength becomes shorter. The largest sensitivity to changes in particle size occur in the downward scattered solar, indicating that this parameter would be most likely to provide an indication of aerosol size distribution and optical properties. Upward scattered sunlight is increased only slightly by background amounts of boundary layer aerosol. Increased absorption by aerosol particles had only a small effect on the downward direct solar radiance, but produced a large relative change in downward scattered solar radiance. The presence of background amounts of boundary layer aerosol had no measurable effect on infrared fluxes.

4147 (UCRL-JC–111848) **Effects of the Mt. Pinatubo eruption on the chemistry, radiative, and transport processes in the stratosphere.** Wuebbles, D.J.; Kinnison, D.E.; Grant, K.E.; Connell, P.S. Lawrence Livermore National Lab., CA (United States). Sep 1992. 10p. Sponsored by USDOE, Washington, DC (United States); National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-930133–3: 73. American Meteorological Society (AMS) annual meeting, Anaheim, CA (United States), 17-22 Jan 1993). Order Number DE93001508. Source: OSTI; NTIS; INIS; GPO Dep.

Volcanic eruptions can significantly impact trace gas distribution in the upper troposphere and lower stratosphere. Massive eruptions, produce large quantities of SO_2, H_2O, chlorine compounds, and particulates. Modeling the effects of these impulsive increases in traces gases and comparing the results with observations from ground and satellite measurements provide unique opportunities to test current multi-dimensional chemical-radiative-transport models of the global atmosphere. Since these models are currently being used in assessment studies for future anthropogenic emissions of trace gases quantitative understanding of the accuracy of these models is essential. In this study, we have used observed data from the Stratospheric Aerosol and Gas Experiment II (SAGE II) aboard the Earth Radiation Budget Satellite (ERBS) to realistically represent both the time dependent change in aerosol surface area density and wavelength dependent extinction values from the Mt. Pinatubo Eruption. Increases in the aerosol loading increase the rate of important heterogeneous chemical reactions converting odd nitrogen in both $ClONO^2$ and N_2O_5 to HNO_3. Radiative effects of increases aerosol optical thickness include changes to net radiative heating rates and to actinic fluxes. Changes to heating rates will indirectly change chemical reaction rates via changes in atmospheric temperatures. changes in actinic fluxes will directly modify photodissociation rates.

4148 (WSRC-TR–92-136) **Heavy rainfall at the SRS in July, August and October of 1990.** Addis, R.P.; Kurzeja, R.J. Westinghouse Savannah River Co., Aiken, SC (United States). [1992]. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93002156. Source: OSTI; NTIS; GPO Dep.

The Savannah River Site experienced intense periods of rainfall on July 25, August 22, October 10–12, and October 22–23, 1990. This report compares the rainfall from these storms with previous storms and with the 100 year rainfall estimates.

4149 (AECS-G/RSS–35) **The use of radon gas techniques in water and soil for monitoring the tectonics and fault activities in Syria 1991.** Al-Hilal, Mohamed (Atomic Energy Commission, Damascus (Syrian Arab Republic)); Al-Hent, Rashad; Kataa, Bassam. Atomic Energy Commission, Damascus (Syrian Arab Republic). Mar 1992. 53p. (In Arabic). Order Number DE93607102. Source: OSTI; NTIS (US Sales Only); INIS.

Radon, Rn^{222}, is continuously emanated from the earth crust as an intermediate decay product of U^{238} radioactive series. The amount of radon that generated from the crustal rocks into atmosphere is normally very small. However, radon emission is known to be anomalously large on active faults and possibly nearby seismic activities. This report presents the possibility of using radon technique for monitoring tectonics and localizing geological faults in Syria. A network of ten sampling stations were set up along the north-south trend Al-Ghab transform fault, which lies within the most active seismic zone in the country. In addition, five stations were set up in parallel to the Palmyride fold belt which extends in SW-NE direction along the central part of Syria. Monthly radon variations were measured in both groundwater and soil gases. Radon data that obtained from this study reveals that the method of radon monitoring over faults seems to be quite useful and successful in identifying geological faults. A correlation between seismic activities, in the region, and radon data has been investigated, and the result shows a fairly good association between radon variations and earthquakes of magnitude (Md > 3). (author). 8 refs., 13 figs., 24 tabs.

4150 (AECS-PR/FRSR–58) **The diffusion of some radionuclides in local rocks collected from potential repository in Syria.** Othman, Ibrahim (Atomic Energy Commission, Damascus (Syrian Arab Republic)); Abou Jamous, Jamal. Atomic Energy Commission, Damascus (Syrian Arab Republic). Jul 1992. 20p. (In Arabic). Order Number DE93607103. Source: OSTI; NTIS (US Sales Only); INIS.

Diffusion factor was estimated for ^{137} Cs in local rocks marl, limestone, and basalt. Slab activity measuring was constructed. Factors affecting the ^{137} Cs diffusion has been studied. These are dynamic state of water, length of contacting time and the concentration of radioisotope. (author). 9 refs., 12 figs., 6 tabs.

4151 (ANL/ESD/TM–32) **Development of an ultrasonic process for detoxifying groundwater and soil: Laboratory research: Annual report for fiscal year 1991.** Wu, J.M.; Huang, H.S.; Livengood, C.D. Argonne National Lab., IL (United States). Energy Systems Div. Jan 1992. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE93002117. Source: OSTI; NTIS; GPO Dep.

Argonne National Laboratory is conducting laboratory research to study the effectiveness of a new technique in which ultrasonic energy is used to convert chlorinated organic compounds into nonhazardous end products. Destruction efficiencies of greater than 99% were achieved for the organic compounds in aqueous solution. Key process parameters, such as solution pH values, steady-state temperatures under operating conditions, ultrasonic-power intensities, and oxidant concentrations, were investigated. In addition, a detailed chemical-kinetic mechanism for the destruction of the organic compounds under an ultrasonic filed was developed and incorporated into a computational model. The agreement between the model and experimental results is generally good.

4152 (CONF-910550–, pp. 753-765) **Environmental influences on diethyl phthalate biodegradation kinetics.** Reardon, K.F. (Colorado State Univ., Fort Collins (United States)); Zhang, G. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

The effects of temperature, dissolved oxygen level, and diethyl phthalate (DEP) concentration on the rates of DEP biodegradation have been investigated in shake flask and fermenter experiments, using aerobic and facultatively aerobic microorganisms. The aerobic strain followed Monod growth kinetics, and was negatively affected by temperatures lower than 25C and dissolved oxygen levels lower than 0.8 mg/L, whereas the specific DEP-degrading activity of the facultative strain was substrate inhibited under anaerobic conditions, higher at 150C than 25C under aerobic conditions, and unaffected by the dissolved oxygen level. Studies were also carried out in soil columns to identify additional factors that might be important for modeling DEP biodegradation.

4153 (CONF-9109358–, pp. 19) **Application of leaching algorithms and worst-case analysis to assessment of risk to ground water from contaminated soils.** Bradford, W.L.; Flanzenbaum, J. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Accurate determination of metal and organic compound concentrations in soils left in place sufficient to prevent ground-water contamination poses uncertainties arising from the complex mechanisms of contaminant leaching through the vadose zone. However, application of simple algorithms to roughly and conservatively simulate leaching through the vadose zone and dispersion in ground water, coupled with conservation worst-case assumptions, can often either demonstrate that soils left in place pose insignificant risk to ground water, or provide conservative estimates of target soil decontamination levels sufficient to protect the potential future users of ground water. In the example discussed in this paper, the authors evaluated the potential for ground-water contamination beneath a 1-acre (0.40 ha) area of soils left in place using: (1) the Organic Leaching Model, an algorithm based upon laboratory measurements relating organic concentrations in soil leachate to solubility to predict organic concentrations of organics in leachates; and (2) the maximum potential metals concentrations obtainable in a standard Toxicity Characteristic Leaching Procedure (TCLP), a test designed to simulate leaching of metals from landfill soils, to predict the concentrations of both organics and metals in leachates potentially entering ground water. Consistent with the worst-case analysis approach, the authors assumed that the entire vadose zone soil column contained contaminant concentrations at the highest levels measured in soil samples. The concentrations of specific contaminants predicted in soil leachates were compared with risk-based standards determined by U.S. EPA. Generally it was found that, in the worst case, the predicted concentrations in leachates themselves were well below the standards.

4154 (CONF-9109358–, pp. 19) **Determination of atrazine in Czechoslovakian water by competitive polyclonal enzyme immunoassay.** Bushway, R.J. (University of Maine, Orono (United States)); Hurst, H.L.; Perkins, L.B.; Skoczenski, B.A.; Harrison, R.O.; Fan, T.; Ferguson, B.S.; Fukal, L. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Atrazine was analyzed by enzyme immunoassay (EIA) in 56 water samples from numerous locations and water supplies (drinking, laboratory, creek and river water) in Czechoslovakia. Two types of immunoassay technology were employed – tubes and microtiter plates. Tubes offer a rapid response under field conditions while with plates one has the advantage of being able to analyze 96 samples simultaneously. All 56 water samples were shown to be positive for atrazine by tube immunoassay with concentrations varying from 0.04 to 12,700 ng/ml with most below 0.3 ng/ml. Reproducibility of atrazine standard curves from day to day yielded percent coefficients of variation (% CVs) for the immunoassay of 5.7 to 10.9% while the repeatability for 20 field samples run on 6 different days had % CVs ranging from 2.1 to 29.4 with most below 15%. Agreement between 34 samples analyzed by both types of immunoassay was good with a Spearman coefficient of 0.847. Seventeen water samples were also analyzed by high-performance liquid chromatography and tube immunoassay. The agreement was excellent with a correlation coefficient of 0.998.

4155 (CONF-9109358–, pp. 15) **Technology screening for stabilization/solidification of contaminated soils.** Colonna, R. (The Earth Technology Corporation, Alexandria, VA (United States)); Pryately, C.; Mazey, R. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Technology screening is a tool used to organize relevant information for each hazardous waste site for the purpose of evaluating the applicability of soil stabilization/solidification techniques. Such screening is required because of the imprecise nature of stabilization/solidification and because most wastes are far from homogeneous. This paper outlines a series of steps for screening technologies to determine their suitability for stabilization/solidification. An understanding of the site and its waste, bench-test evaluation of the stabilization/solidification waste from, and an understanding of the implementation and costs of stabilization/solidification will aid in making an informed judgment about technology suitability. The choice of a final technology will inevitably reflect a compromise based on chemical, physical, and cost considerations. This section does not discuss design considerations in the screening of stabilization/solidification technologies; rather, it discusses the feasibility of the technologies.

4156 (CONF-9109358–, pp. 22) **Simulation of contaminant transport in the unsaturated zone.** Uchrin, C.G. (Rutgers, The State University of New Jersey, New Brunswick (United States)); Williams, B.C. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

The fate and transport of volatile organic contaminants (VOC's) in soil/ground water systems has become an issue of national and local concern. A state-wide study of toxic contamination in New Jersey found that VOC's present the most serious threat to ground water contamination (Tucker, 1981). Toluene, a constituent of petroleum products is one VOC of concern. The number of gasoline storage tanks in the U.S. has been estimated to be between

1.5 and 2 million. Failure of these underground storage tanks, (UST's), is a major source of ground water pollution. It has been approximated that as many as 75,000 to 100,000 of these tanks leak (Predpall, et al. 1984). Buried gasoline tanks and service stations are the most common source of leakage investigated (Canter et al., 1987 pp.81). The Coastal Plains of New Jersey, which house predominantly sandy unconfined aquifers, are especially vulnerable to contamination. Pump and treat methods, while able to mobilize a significant mass of contaminants, invariably leaves a residual fraction the can contaminate the reserve for years to come. This residual fraction is composed of lighter organic compounds such as toluene, that due to its decreased density, 'float' on the ground water table in the capillary zone. A clear understanding of these lighter components and their mobility in the vadose and saturated zone is paramount in both the prediction of contaminant movement, and the clean-up/restoration of contaminated systems. This paper describes to date results form an ongoing study focusing on the mobility of toluene in the vadose zone.

4157 (CONF-9109358–, pp. 29) **Chemical sensors and field screening technologies in surface- and ground-water monitoring.** Poziomek, E.J. (University of Nevada, Las Vegas (United States)); Engelmann, W.H.; Koglin, E.N. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Ideally, field screening methods for hazardous waste site investigations involve using of rapid, low-cost test methods to determine the presence or absence of analytes of interest, and can yield analyte concentrations within a predetermined range or threshold at a site. These methods help to quickly establish a directed comprehensive monitoring program for a given site, and assist in the assigning priority relative to other sites. Some methods may be as accurate and precise as laboratory methods. This paper presents the state-of-the-art in field screening technology with emphasis on emerging trends in surface- and ground-water monitoring. It includes an analysis of the output from the Second International Symposium on Field Screening Methods for Hazardous Wastes and Toxic Chemicals held in February 1991. Special consideration is given to chemical sensors that show promise toward miniaturization and low cost. The most mature technologies use gas chromatography (GC), mass spectrometry (MS), and x-ray fluorescence (XRF) spectrometry. Several emerging technologies are identified that show promise in the long term for surface- and ground-water monitoring. These include immunoassay field methods, ultraviolet and luminescence spectroscopy, ion mobility spectrometry (IMS), and spectroelectrochemistry.

4158 (CONF-9109358–, pp. 17) **Toxicological implications of remediating hazardous wastes.** Peterson, S.A. (U.S. EPA Environmental Research Laboratory, Corvallis, OR (United States)); Barich, J.J. III; Greene, J.C. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Section 121 of the amendments (1986) to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (SUPERFUND) calls for hazardous waste site remediations that will permanently and significantly reduce the volume, toxicity, or mobility of hazardous substances, pollutants, and contaminants. Traditional engineering technology has concentrated on reduction in volume and mobility as assessed by chemical and geophysical measures, assuming that reduction in volume and mobility would lead to reductions in toxicologically has hampered integrated assessments. Therefore, new work was initiated to assemble a battery of aquatic and terrestrial bioassays to be evaluated comparatively against several individual chemicals, mixtures of chemicals, and actual waste site chemical mixtures. The bioassays were then applied to a mobility reduction demonstration to help assess its overall chemical, physical, and biological performance. Results indicated that although remediation accomplished the primary objective of mobility reduction, it introduced undesirable secondary effects (toxicity). These trade-offs must be considered in the holistic sense with regard to the implementation and evaluation of remediation measures.

4159 (CONF-9109358–, pp. 7) **Forms of lead and cadmium soil in the vicinity of lead reprocessing smelter.** Brabec, E. (Botanical Institute (Czechoslovakia)); Mejstrik, V.; Velicka, J. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

The separation efficiency of two extraction methods was evaluated in percentage terms with respect to the results obtained by mineralization (reference); this efficiency was found to be higher for the deeper soil horizons than for horizons near the surface indicating that in deeper horizons, Pb and Cd are tied to the soil by weaker bonds. The extraction recovery did not improve significantly if the extraction time was extended from 1 hr to 3 hrs.

4160 (CONF-9109358–, pp. 20) **A field guide for characterization of hazardous waste sites.** Cameron, R.E. (Lockheed Engineering and Sciences Company, Las Vegas, NV (United States)). USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

A field guide (knowledge book) has been developed to identify, describe, and interpret site and soil characteristics of hazardous waste sites. It particularly addresses U.S. Environmental Protection Agency (EPA) needs for standard procedures, guidelines, or protocols that stress site and soil contamination. Thirty-five 'knowledge frames' are provided for the most commonly encountered site and soil characteristics, each of which contains specific guidance for description of a parameter. The format of the knowledge frames is compatible with the Environmental Sampling Expert System (ESES) software. The field guide is also designed for use with an accompanying field pocket guide, which provides methods for site and soil description and analysis.

4161 (CONF-9109358–, pp. 10) **Ground water contamination with inorganic nitrogen in the vicinity of a solid waste landfill.** Rattue, K.G. (America North Inc., Anchorage, AK (United States)); Marinas, B.; Chapin, D. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Subsurface investigations performed at the Hidden Valley Landfill since 1985 have provided information which indicates that landfilling operations have resulted in the release of leachate-derived contaminates into the uppermost water bearing zone beneath the landfill and the contamination of this aquifer hydraulically downgradient of the site. Sporadic detections of nitrate-nitrogen at concentrations greater than the federal primary drinking water standard of 10 milligrams per liter (mg/L) resulted in the implementation of a more intensive site-specific monitoring program, and consideration of alternatives to remediate affected ground water used for potable supply.

4162 (CONF-9109358–, pp. 17) **Removal of hazardous materials: Decontamination of soils and ground water at a hazardous waste disposal site.** Erdogan, H. (New Jersey Department of Environmental Protection, Trenton (United States)); Halasi-Kun, G.J. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Improper and indiscriminate hazardous waste disposal resulted in several contaminated sites in the United States. The U.S. has over 32,000 potential sites throughout the country. There are 1,200

identified National Priority sites across the U.S. with most states having 10 or more sites. The state of New Jersey has the most number of superfund sites in the U.S. In this paper, potential soil and ground water decontamination methods including factors affecting performance of each method and application of the methods are analyzed. Additionally, cleanup of a superfund site in New Jersey including geology, hydrogeology of the site, extent of ground water contamination and soil and sediment contamination and proposed final remedial action are examined.

4163 (CONF-9109358–, pp. 8) **Heavy elements in fruit and vegetables cultivated in Siedlce district in Poland.** Zalewski, W. (Agricultural and Teachers University, Siedlce (Poland)); Oprzadek, K.; Syrocka, K.; Lipinska, J.; Jaroszynska, J. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

In the years 1988 and 1990 the content of iron, manganese, zinc, copper, nickel, lead and cadmium were determined by atomic absorption spectrometry methods in vegetables and fruits cultivated in Siedlce District. The metals concentration was measured in strawberry, black currant, red currant, apple, plum, carrot, cabbage, tomato, cucumber, red beet, parsley and celery (leaves and roots) and potato. Only in a few samples of parsley leaves and celery did the contents of lead and zinc exceed the limit permitted by Polish Ministry of Health. The contents of cadmium greater than 0.03mg/kg in fresh vegetable weight was found in many samples of parsley, celery and in several samples of carrot, potato, red beet and strawberry.

4164 (CONF-9109358–, pp. 8) **Relationship between livestock activities and nitrogen compounds in the aquifers of the Asturias and Cantabria provinces (Spain).** Navarrete, P. (Instituto Tecnologico GeoMinero de Espana (Spain)); Arenas, M.; Martin, G.; Virgos, L. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

This report presents the results of the analysis of nitrogen compounds (nitrate, nitrite and ammonia) on groundprovinces located in northern Spain. An evaluation of the contaminant load generated by breeding wastes, in terms of nitrogen contents, has been carried out. Samples were collected in springs and wells using the in-place pumps. Physical properties and nitrogen compounds were 'in situ' determined. The results of the analysis indicate low concentrations of nitrate and nitrite ions, but in some cases significant concentrations of ammonia, which origin is attributed to the farmer's wastes spilled in the neighborhood of the springs over high vulnerable aquifers with a low soil protection. Nitrate concentration agrees with the calculated nitrogen loads generated by livestock wastes.

4165 (CONF-9109358–, pp. 10) **Experimental approach to monitoring the presence and movement of pesticides in unsaturated zone and groundwater.** Navarrete, P. (Instituto Tecnologico GeoMinero de Espana (Spain)); Jimenez, J.R.; Aroca, E.; Beltran, J.; Esteller, M.V.; Hernandez, F.; Morell, I. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

An experimental work to determine the presence and movement of pesticides and related compounds in soil solution and groundwater is made in a citric crop field in the Plana of Castellon (Spain). A hydrogeological study of the whole aquifer has been carried out, to determine the hydrodynamic parameters affecting the behavior of the pollutants in the unsaturated and saturated zones, with emphasis in the lithological distributions, both vertical and horizontal, in the experimental field. The whole study includes the analysis of several water samples from the unsaturated zone at different depths, between 0.2 and 3.4 meters, and groundwater samples from two wells close to the experimental field. Moreover, several samples of soil were also collected and analyzed for their characterization. The procedure to collect soil solution samples was carried out by using pressure-vacuum soil samplers, consisting in PVC or stainless steel probes with porous ceramic cups. The vacuum within the sampler causes the moisture to move from the unsaturated zone through the cup. Several pesticides widely used in the area, at their recommended doses, were spread in the field and irrigation was made at the habitual rates for citric crops. Pesticides studied included organophosphorus and organochlorine insecticides, and phenoxyacid herbicides. Samples were collected monthly and given to the laboratory to analyze.

4166 (CONF-9109358–, pp. 1) **Tracing bomb-spike tritium to estimate rates of vertical recharge and pollutant transport through unsaturated glacial till.** Daniels, D.P. (Engineering Science, Atlanta, GA (United States)); Fritz, S.J.; Leap, D.I. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Tracing the movement of ground water from recharge to discharge points is important in estimating both ground-water budgets and potential rates of vertical infiltration of pollutants from the surface. Particularly difficult is the task of estimating these rates in unsaturated geological materials. Atmospheric tritium, produced by above-ground nuclear-weapons testing in the late 1950's and early 60's, has been proven to be a very useful tracer in saturated materials. Recently, the authors used it to estimate vertical recharge rates in unsaturated glacial till. The results of their investigations, corroborated by an independent method, indicate that this tracer and methods of tracking it can be used to great advantage in estimating rates of vertical pollutant transport in unsaturated materials as well.

4167 (CONF-9109358–, pp. 13) **Toward a better understanding of the geographic distribution of radon in domestic water supplies.** Cech, I. (University of Texas School of Public Health, Houston (United States)); Siegele, P.; Merritt, M.; Venso, E. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

The ingestion and inhalation of radioactive products of uranium (U-238) decay, isotopes of radium (Ra-226) and radon (Rn-222), are worldwide concerns. Beginning in 1984, a series of sequential studies was carried out by Cech and coworkers at the University of Texas School of Public Health in the search for predictors of radium and radon presence in water supplies. Several hundred samples of water were collected from public and individually-owned domestic water sources, as well as from sources of water used for livestock watering, industrial purposes, and oil production. Data are mapped and statistically analyzed by aquifer, pumping depth, and distance from potential controlling features, such as faults, salt domes, lignite, and hydrocarbon deposits. This produced one of the largest databases ever collected on radionuclides in ground and surface water sources. Finding radon anomalies in Tertiary clastic aquifers in Texas suggests that unsuspected high concentrations may exist elsewhere in the world. While locations of deeply buried uranium bodies are difficult to predict, this study documents that high concentrations of radon are likely to be found in water pumped near zones of faulting and other potential uranium trapping features. This is important, as it offers the possibility of avoiding high risk areas when developing water wells.

4168 (CONF-9109358–, pp. 1) **Radium and radon in groundwater: Health significance and water well development strategies.** Cech, I. (The University of Texas Health Science Center, Houston (United States)). USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

A series of studies was conducted in Texas to assess concentrations of Ra-226 and Rn-222 in ground and surface water supplies. Nearly 1,000 samples of drinking water were obtained from public and individually-owned domestic water wells and surface sources. In addition, samples are obtained from wells used for livestock watering, industrial purposes, and oil production. Concentrations as high as 23 pCi/l of Ra and 26,000 pCi/l of Rn were encountered in public water wells along the gulf coast and in parts of west-central Texas. These anomalously high concentrations are the result of the decay of naturally occurring uranium deposits in rocks below the aquifers. The same regions have been reported in the literature as being in the highest decile for the State of Texas and in the nation for respiratory cancer mortality. A similar position of aquifers above uranium-bearing sediments occurs in other parts of the world. While the location of deeply buried uranium bodies is difficult to predict, the Texas study documents that anomalously high concentrations of uranium progenies, Ra and Rn, are likely to be found in the ground water near zones of faulting. This is important, as it offers the possibility of avoiding high risk areas when developing water wells.

4169 (CONF-9109358–, pp. 16) **The design of soil restoration treatability studies.** Barich III, J.J. (USEPA, Seattle, WA (United States)); Barth, E.F.; Jones, R.R. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Contaminated soils are a feature common to many hazardous waste sites in the United States. They are studied frequently to determine the nature and extent of contamination (site characterization), and less frequently to develop soil restoration strategies (treatability). Sampling and analytical needs for contaminated soil treatability studies are discussed, with emphasis on how treatability studies differ from the more common site characterization studies. The use of bulk site reference materials in the conduct of treatability studies is introduced.

4170 (CONF-9204205–1) **Cokriging surface elevation and seismic refraction data for bedrock topography.** Nyquist, J.E. (Oak Ridge National Lab., TN (United States)); Doll, W.E.; Davis, R.K.; Hopkins, R.A. Oak Ridge National Lab., TN (United States). [1992]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on application of geophysics to engineering and environmental problems; Oakbrook, IL (United States); 26-29 Apr 1992. Order Number DE93001369. Source: OSTI; NTIS; INIS; GPO Dep.

Analysis of seismic refraction data collected at a proposed site of the Advanced Neutron Source (ANS) Facility showed a strong correlation between surface and bedrock topography. By combining seismically determined bedrock elevation data with surface elevation data using cokriging, we were able to significantly improve our map of bedrock topography without collecting additional seismic data.

4171 (CONF-9204205–2) **Geophysical investigation and characterization with USRADS.** Flynn, C.R. (Chemrad Tennessee Corp., Oak Ridge, TN (United States)); Blair, M.S.; Nyquist, J.E. Oak Ridge National Lab., TN (United States). [1992]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on application of geophysics to engineering and environmental problems; Oakbrook, IL (United States); 26-29 Apr 1992. Order Number DE93001363. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes two recent case histories in which commercially available geophysical instruments were used with an innovative tracking and mapping system called USRADS (UltraSonic Ranging And Data System) that automates data location and collection. USRADS uses ultrasonics to provide real-time surveyor positioning and radio links to transmit the surveyor data to an on-site computer for storage and real-time display. USRADS uses a standard 386 computer for data collection and includes real-time color display of the findings. It also includes numerous analysis and display formats for on-site, as well as utilities to facilitate post-process analysis of the findings. The objective of one project was to locate several suspect waste disposal trenches and to map their boundaries. The second was to locate and map the presence of subsurface unexploded ordinance (UXO) at a suspect artillery impact area. A Geonics EM31 terrain conductivity meter interfaced to USRADS was used to map the suspect trenches. A Schonstedt GA-52C magnetometer interfaced to USRADS was used to map the subsurface UXO. Correlation of findings to known site features and additional knowledge about the sites indicates that these efforts did locate and map the geophysical features including the suspect waste trenches and the subsurface UXO. Images of the findings generated on-site and during post-processing are included.

4172 (CONF-9205261–1) **Modeling socioeconomic and ecologic aspects of land-use change: A case study of Central Rondonia.** Dale, V.H.; Pedlowski, M.A.; O'Neill, R.V.; Southworth, F. Oak Ridge National Lab., TN (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From FOREST '92: 2nd international symposium on environmental studies of tropical rain forests; Rio de Janeiro (Brazil); 24-29 May 1992. Order Number DE93001370. Source: OSTI; NTIS; INIS; GPO Dep.

Land use change is one of the major factors affecting global environmental conditions. Prevalent types of land-use change include replacing forests with agriculture, mines or ranches; forest degradation from collection of firewood; and forest logging. A global effect of wide-scale deforestation is an increase in atmospheric carbon dioxide concentration, which may affect climate. Regional effects include loss of biodiversity and disruption of hydrologic regimes. Local effects include soil erosion, siltation and decreases in soil fertility, loss of extractive reserves, and disruption of indigenous people. Modeling land use change requires combining socioeconomic and ecological factors because socioeconomic forces frequently initiate land-use change and are affected by the subsequent ecological degradation. This paper describes a modeling system that integrates submodels of human colonization and impacts to estimate patterns and rates of deforestation under different immigration and land use scenarios. Immigration which follows road building or paving is a major factor in the rapid deforestation of previously inaccessible areas. Roads facilitate colonization, allow access for large machines, and provide transportation routes for mort of raw materials and produce.

4173 (CONF-9208157–1) **Effect of chemical form of mercury on the performance of dosed soils in standard leaching tests: EP and TCLP.** Turner, R.R. Oak Ridge National Lab., TN (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States); Environmental Protection Agency, Washington, DC (United States). DOE Contract AC05-84OR21400. From Arsenic and mercury workshop on removal, recovery, treatment and disposal; Alexandria, VA (United States); 17-20 Aug 1992. Order Number DE93000442. Source: OSTI; NTIS; INIS; GPO Dep.

There are few regulatory and/or advisory criteria for mercury in contaminated soils, sediment, and waste. The most widely applied criterion for mercury in solid material is the performance of solid samples analyzed with leaching procedures developed by the US Environmental Protection Agency (EPA). These protocols, along with others, have been used to classify wastes under the Resource Conservation and Recovery Act (RCRA). Leaching results, expressed as the concentration of mercury in the laboratory-generated leachate, are compared to 200 μg/L. Results above this criterion are classified as having failed the RCRA "toxicity characteristic." The 200 μg/L limit represents 100 times the Drinking Water Standard for mercury and requires the sample to contain at least 4 μg/g. The latter value is derived by multiplying the established limit, 200 μg/L, by the solution-to-solid ratio in the test, 0.02 L/g. Objectives of this study were to determine which forms of mercury in soil exhibit the highest leachability as analyzed by the EP and TCLP protocols and to determine whether headspace mercury vapor readings from soil samples are indicative of leaching performance. The four mercury compounds studied were elemental mercury (Hg^0), mercuric sulfide (HgS), mercuric oxide (HgO), and mercurous oxide (Hg_2O). Whether the two leaching procedures yield equivalent results was also addressed.

4174 (CONF-9208167–1) **Soil organic matter dynamics and the global carbon cycle.** Post, W.M.; Emanuel, W.R.; King, A.W. Oak Ridge National Lab., TN (United States). [1992]. 17p.

Sponsored by USDOE, Washington, DC (United States); National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract AC05-84OR21400. Grant NAGW-2660. From International workshop on world inventory; Wageningen (Netherlands); 24-27 Aug 1992. Order Number DE93001367. Source: OSTI; NTIS; INIS; GPO Dep.

The large size and potentially long residence time of the soil organic matter pool make it an important component of the global carbon cycle. Net terrestrial primary production of about 60 Pg $C \cdot yr^{-1}$ is, over a several-year period of time, balanced by an equivalent flux of litter production and subsequent decomposition of detritus and soil organic matter. We will review many of the major factors that influence soil organic matter dynamics that need to be explicitly considered in development of global estimates of carbon turnover in the world's soils. We will also discuss current decomposition models that are general enough to be used to develop a representation of global soil organic matter dynamics.

4175 (DOE/BP–1948) **Proposed plan for remedial action at Ross Complex (Superfund) Site, Operable Unit A.** USDOE Bonneville Power Administration, Portland, OR (United States). Aug 1992. 9p. Sponsored by USDOE, Washington, DC (United States). Order Number DE92040932. Source: OSTI; NTIS; GPO Dep.

This Proposed Plan identifies the preferred options and summaries of other alternatives considered for cleaning up contaminated soils at the Bonneville Power Administration (BPA) Ross Complex located in Vancouver, Washington (Clark County). BPA, the US Environmental Protection Agency (EPA), and the Washington State Department of Ecology (Ecology) are seeking comments from the public on all alternatives in this proposed plan. The alternative to be used will not be selected until the public comment period has ended and all comments have been received and considered. The site is divided into two operable units, A and B. Operable Unit A addresses site soils and Operable Unit B will focus on potential surface water, ground water, and limited soils investigation. Operable Unit B will be completed in June 1993. This Proposed Plan is for Operable Unit A. This Proposed Plan is provided to encourage public participation in the clean up decision-making process in accordance with section 117(a) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). This Plan briefly summarizes available information contained in the Remedial Investigation/Feasibility Study (RI/FS) and other documents contained in the administrative record for this site.

4176 (DOE/CH–9210) **Predicted performance of systems for Bulk Soil Assay, Barrel Inspection, and Decommissioning: Final report.** Aitken, A.H.; Peters, C.W. Nuclear Diagnostic Systems, Inc., Lorton, VA (United States). Nov 1991. 46p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE93002045. Source: OSTI; NTIS; INIS; GPO Dep.

In this project performances are predicted for new neutron interrogation systems designed to detect pollutant elements, uranium and transuranics (TRU), and gamma-ray emitters for Bulk Soil Assay, Barrel Inspection, and Decommissioning problems in the DOE Environment Restoration program. These new systems, which are based on the associated-particle time-of-flight (APTOF) technology are expected to save up to four times their $1.00 per hour operating costs relative to their alternatives for these problems. The key component required for practical use of the APTOF technology is a small sealed-tube neutron-generator (STNG) that incorporates a position sensitive alpha detector used to sense the alpha particle associated with emission of a 14-MeV neutron in the (D,T) reaction. The STNG makes possible a unique Inelastic-Gamma Imaging and Spectroscopy (IGRIS) system which provides a coarse three-dimensional image of the densities of elements in a target. Additional measurement capabilities as Capture-Gamma Ray Spectroscopy (CGRS) carried out simultaneously with IGRIS, Passive (STNG off) Gamma Ray Spectroscopy (PGRS), and Gamma-Ray Coincidence Spectroscopy (GRCS) carried out simultaneously with IGRIS, CGRS, and PGRS. These measurements are complementary and synergistic with each other. For example, the imaging capability of IGRIS can be used to estimate neutron and gamma-ray attenuations to correct any of these measurements. Predicted minimum detectable levels (MDLS) for several elements and radionuclides were measured and are presented.

4177 (DOE/CH–9214) **Chromate reduction and heavy metal fixation in soil: Final report.** Schwitzgebel, K. Sizemore Technical Services, Inc., Round Rock, TX (United States). Jun 1992. 63p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE93002266. Source: OSTI; NTIS; INIS; GPO Dep.

In situ reduction of chromates and the fixation of the metals Cr, Pb, Zn, Cu, Cd and Ni in soil was investigated using Fe II and soluble silica. Fe II fulfills two functions. It reduces chromates (CrVI) at soil pH to CrIII and the reaction products, $Fe(OH)_3$ and $Cr(OH)_3$, coprecipitate/adsorb heavy metals. In the absence of CrVI iron is added as FeIII. Destabilized silica also fulfills two functions. It reacts with the metal and metal hydroxides and reduces the soil permeability. The leaching rate (mg/m^2s) of a metal is the product of leachate flow rate (ℓ/M^2s) and the leachate concentration (mg/ℓ). The leachate flow rate is directly proportional to the hydraulic coefficient (Darcy's Law). Treatment with destabilized silica reduces the hydraulic coefficient of virgin soil ($K_h = 10^{-2}...10^{-4}$) to $K_h=10^{-7}$ (cm/s) resulting in a flow rate reduction of 3–5 orders of magnitude. Iron plus silica treatment results in a leachate concentration reduction of up to 2 orders of magnitude (Cr:95–99%;Pb:99%;Zn 95–99%; Cd:93–99%; Ni:75–94%). Combined effect of flow rate reduction and leachate concentration reduction results in a potential leaching rate reduction of five to seven orders of magnitude. Iron-silica treatment may be developed into an efficient containment technology, provided the silica gel integrity does not change with time.

4178 (DOE/ER/30196–1) **Organic acid modeling and model validation: Workshop summary: Final report.** Sullivan, T.J.; Eilers, J.M. E and S Environmental Chemistry, Inc., Corvallis, OR (United States). 14 Aug 1992. 47p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER30196. (CONF-9204207–Summ.: Organic acid modeling and model validation workshop, Corvallis, OR (United States), 9-10 Apr 1992). Order Number DE93001862. Source: OSTI; NTIS; GPO Dep.

A workshop was held in Corvallis, Oregon on April 9–10, 1992 at the offices of E&S Environmental Chemistry, Inc. The purpose of this workshop was to initiate research efforts on the entitled "Incorporation of an organic acid representation into MAGIC (Model of Acidification of Groundwater in Catchments) and testing of the revised model using Independent data sources." The workshop was attended by a team of internationally-recognized experts in the fields of surface water acid-bass chemistry, organic acids, and watershed modeling. The rationale for the proposed research is based on the recent comparison between MAGIC model hindcasts and paleolimnological inferences of historical acidification for a set of 33 statistically-selected Adirondack lakes. Agreement between diatom-inferred and MAGIC-hindcast lakewater chemistry in the earlier research had been less than satisfactory. Based on preliminary analyses, it was concluded that incorporation of a reasonable organic acid representation into the version of MAGIC used for hindcasting was the logical next step toward improving model agreement.

4179 (DOE/ER/60743–3) **Water Science and Technology Board annual report, 1990.** National Research Council, Washington, DC (United States). Water Science and Technology Board. 1990. 42p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-89ER60743. Order Number DE93002801. Source: OSTI; NTIS; GPO Dep.

This report summarizes the activities of the Water Science and Technology Board (WSTB) during 1990, its eighth year of existence. It describes current and recently completed projects, new activities scheduled to begin in 1991, and plans for the future. The WSTB is intended to be a dynamic forum, a mechanism by which the board community of water science, technology, and policy professionals can help assure high-quality national water programs. As such, the Board considers out-reach and communications of much importance.

4180 (DOE/ER/60775–T1) **Water use, productivity and interactions among desert plants.** Ehleringer, J.R. Utah Univ., Salt Lake City, UT (United States). Dept. of Biology. 17 Nov 1992. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER60775. Order Number DE93004643. Source: OSTI; NTIS; GPO Dep.

Water plays a central role affecting all aspects of the dynamics in aridland ecosystems. Productivity, stability, and competitive interactions among ecosystem components within aridlands are key processes related directly to water in deserts. The ecological studies in this project revolve around one fundamental premise: that integrated aspects of plant metabolism provide insight into the structure and function of plant communities and ecosystems. While it is difficult to extrapolate from instantaneous physiological observations to higher scales, such as whole plant performance or to interactions between plants as components of ecosystems, several key aspects of plant metabolism are scalable. Analyses of stable isotopic composition in plant tissues at natural abundance levels provide a useful tool that can provide insight into the consequences of physiological processes over temporal and spatial scales. Some plant processes continuously fractionate among light and heavy stable isotopic forms of an element; over time this results in integrated measures of plant metabolism. For example, carbon isotope fractionation during photosynthesis results in leaf carbon isotopic composition that is a measure of the set-point for photosynthetic metabolism and of water-use efficiency. Thus it provides information on the temporal scaling of a key physiological process. In contrast, hydrogen is not fractionated during water uptake through the root. Soil water availability in shallow, deep, and/or groundwater layers vary spatially; therefore hydrogen isotope ratios of xylem sap provide a direct measure of the water source currently used by a plant. The longer-term record of carbon and hydrogen isotope ratios is recorded annually in xylem tissues (tree rings). The research in this project addresses variation in stable isotopic composition of aridland plants and its consequences for plant performance and community-level interactions.

4181 (DOE/ER/60988–T1) **Biomass, community structure and nutritional status attributes of the deep subsurface microbiota—at Idaho and Hanford sites.** White, D.C. (Tennessee Univ., Knoxville, TN (United States). Center for Environmental Biotechnology); Ringelberg, D.B. Tennessee Univ., Knoxville, TN (United States). Center for Environmental Biotechnology. 28 Oct 1991. 18p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States); Electric Power Research Inst., Palo Alto, CA (United States); National Aeronautics and Space Administration, Washington, DC (United States); Nationa DOE Contract FG05-90ER60988. Order Number DE93003594. Source: OSTI; NTIS; GPO Dep.

The signature lipid biomarker technique based on phospholipid ester-linked fatty acid pattern analysis (PLFA) provides data on the total viable or potentially viable communities without the necessity of: (1) Quantitative recovery from the sediments or (2) The ability to culture the organisms. Analysis of PLFA provides evidence for the nutritional status (starvation and/or unbalanced growth) in situ. PLFA analysis of SSP samples from the INEL and PNL sites vadose zones showed higher biomass at the surface with prominent Actinomyces biomarkers with lower biomasses of stressed microbiota at progressively greater depth. The biomass and community diversity increased at the water table at both sites. Both these Western sites showed lower viable microbial biomasses than the WSRS samples. Cluster analysis of the total patterns from various sedimentary horizons showed three major consortia of microbes, with surface microbiota related at both sites, low viable biomass sites closely related at both sites, with anaerobic desaturase pathway being predominant at INEL and consortia utilizing predominantly branched saturated and the aerobic desaturase pathway at both sites. Preliminary examination of the consortia recovered from NTS show a clear relationship to water level.

4182 (DOE/ER/75637–1) **Greenhouse Earth: A Traveling Exhibition: Final report, September 1, 1991–August 31, 1992.** Booth, W.H.; Caesar, S. Franklin Inst., Philadelphia, PA (United States). Science Museum. Sep 1992. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER75637. Order Number DE93002419. Source: OSTI; NTIS; INIS; GPO Dep.

The Franklin Institute Science Museum provided an exhibit entitled the Greenhouse Earth: A Traveling Exhibition. This 3500 square-foot exhibit on global climate change was developed in collaboration with the Association of Science-Technology Centers. The exhibit opened at The Franklin Institute on February 14, 1992, welcoming 291,000 visitors over its three-month stay. During its three-year tour, Greenhouse Earth will travel to ten US cities, reaching two million visitors. Greenhouse Earth aims to deepen public understanding of the scientific issues of global warming and the conservation measures that can be taken to slow its effects. The exhibit features hands-on exhibitry, interactive computer programs and videos, a theater production, a "demonstration cart," guided tours, and lectures. supplemental educational programs at the Institute included a teachers preview, a symposium on climate change, and a "satellite field trip." The development of Greenhouse Earth included front-end and formative evaluation procedures. Evaluation includes interviews with visitors, prototypes, and summative surveys for participating museums. During its stay in Philadelphia, Greenhouse Earth was covered by the local and national press, with reviews in print and broadcast media. Greenhouse Earth is the first large-scale museum exhibit to address global climate change.

4183 (DOE/NV/10630–23) **CASCADER: An m-chain gas-phase radionuclide transport and fate model: Volume 1, Basic physics and mathematics.** Lindstrom, F.T.; Cawlfield, D.E.; Emer, D.F.; Shott, G.J.; Donahue, M.E. Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (United States). Jun 1992. 92p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-89NV10630. Order Number DE93001390. Source: OSTI; NTIS; INIS; GPO Dep.

Chemicals and radionuclides move either in the gas-phase, liquid-phase, or both phases in soils. They may be acted upon by either biological or abiotic processes as they are advected and/or dispersed. Furthermore, parent and daughter radionuclides may decay as they are transported in the soil. CASCADER is a gas-phase, one space dimensional transport and fate model for an m-chain of radionuclides in very dry soil. This model contains barometric pressure-induced advection and diffusion together with linear irreversible and linear reversible sorption for each radionuclide. The advocation velocity is derived from an embedded air-pumping submodel. The airpumping submodel is based on an assumption of isothermal conditions and is barometric pressure driven. CASCADER allows the concentration of source radionuclides to decay via the classical Bateman chain of simple, first-order kinetic processes. The transported radionuclides also decay via first-order processes while in the soil. A mass conserving, flux-type inlet and exit set of boundary conditions is used. The user must supply the initial distribution for the parent radionuclide in the soil. The initial daughter distribution is found using equilibrium rules. The model is user friendly as it uses a prompt-driven, free-form input. The code is ANSI standard Fortran 77.

4184 (DOE-RW–89-091) **The location of uranium in source rocks and sites of secondary deposition at the Needle's Eye natural analogue site, Dumfries and Galloway.** Basham, I.R. (British Geological Survey, Edinburgh (United Kingdom)); Hyslop, E.K.; Milodowski, A.E.; Pearce, J.M. Department of the Environment, London (United Kingdom). Her Majesty's Inspectorate of Pollution. Aug 1989. 56p. Contract WE/89/56. (PECD–7-9-367.). Order Number DE93607139. Source: OSTI; NTIS (US Sales Only); INIS.

The British Geological Survey has been conducting a co-ordinated research programme at the natural analogue site of Needle's Eye at Southwick on the Solway coast in SW Scotland. This study of a naturally radioactive geochemical system has been carried out with the aim of improving our confidence in using predictive models of radionuclide migration in the geosphere. This report describes results of integrated mineralogical techniques which have been applied to the study of both the 'source-term' and sites of secondary accumulation of uranium. Pitchblende in a polymetallic-carbonate breccia vein exposed in ancient sea-cliffs is the main source of labile uranium although other uranium-bearing

minerals present in the granodiorite and hornfelsed siltstone host-rocks present probable ancillary leachable sites. In keeping with the complex chemistry of the primary sulphide-rich mineralization, a large variety of secondary U minerals has been recorded among which arsenates and hydrous silicates appear to predominate. Uranium transported in groundwaters draining the cliffs has accumulated in organic-rich estuarine/intertidal mudflat sediments of Quaternary age. Charged particle track registration techniques have demonstrated convincingly the effectiveness of humidified organic matter in retarding uranium transport and, coupled with scanning electron microscopy, have indicated an important role of living plants and bacteria in uranium uptake and concentration. (author).

4185 (EGG–10617-1154) **An aerial radiological survey of the Portsmouth Gaseous Diffusion Plant and surrounding area, Portsmouth, Ohio: Date of survey: July 1990.** EG and G Energy Measurements, Inc., Las Vegas, NV (United States). Remote Sensing Lab. Sep 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-88NV10617. Order Number DE93003327. Source: OSTI; NTIS; INIS; GPO Dep.

An aerial radiological survey was conducted from July 11–20, 1990, over an 83-square-kilometer (32-square-mile) area surrounding the Portsmouth Gaseous Diffusion Plant located near Portsmouth, Ohio. The survey was conducted at a nominal altitude of 91 meters (300 feet) with line spacings of 122 meters (400 feet). A contour map of the terrestrial gamma exposure rate extrapolated to 1 meter above ground level (AGL) was prepared and overlaid on an aerial photograph and a set of United States Geological Survey (USGS) topographic maps of the area. The terrestrial exposure rates varied from about 7 to 14 microroentgens per hour (μR/h) at 1 meter above the ground. Analysis of the data for man-made sources and for the uranium decay product, protactinium-234m (^{234m}Pa), showed five sites within the boundaries of the Portsmouth Gaseous Diffusion Plant with elevated readings. Spectra obtained in the vicinity of the buildings at the Portsmouth Gaseous Diffusion Plant showed the presence of ^{234m}Pa, a uranium-238 (^{238}U) decay product. In addition, spectral analysis of the data obtained over the processing plant facility showed gamma activity indicative of uranium-235 (^{234}U). No other man-made gamma ray emitting radioactive material was detected, either on or off the Portsmouth Gaseous Diffusion Plant property. Soil samples and pressurized ion chamber measurements were obtained at five different locations within the survey boundaries to support the aerial data.

4186 (ES/ER/TM–26/R1) **Project plan for the Background Soil Characterization Project on the Oak Ridge Reservation, Oak Ridge, Tennessee.** Oak Ridge National Lab., TN (United States). Aug 1992. 159p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93000788. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental Sciences Division Publication 3818.

The Background Soil characterization Project (BSCP) will provide background concentration levels of selected metals, organic compounds, and radionuclides in soils from uncontaminated on-site areas at the Oak Ridge Reservation (ORR), and off-site in the western part of Roane County and the eastern part of Anderson County. The BSCP will establish a database, recommend how to use the data for contaminated site assessment, and provide estimates of the potential human health and environmental risks associated with the background level concentrations of potentially hazardous constituents.

4187 (ETDE-mf–93728810) **Highly volatile halogenated hydrocarbons in subsurface systems. Biotic-abiotic degradation and elimination. A literature study.** WaBoLu-Hefte. Wendland, F.; Leschber, R. Bundesgesundheitsamt, Berlin (Germany). Inst. fuer Wasser-, Boden- und Lufthygiene. 1990 76p. (In German). Order Number DE93728810. Source: OSTI; NTIS (US Sales Only).

Biodegradation of halogenated hydrocarbons (HC) is one possible natural pathway for elimination from the environment next to abiotic degradation processes and elimination pathways. At the same, different microbially controlled geochemical processes take place underground which may be assumed to be linked in a certain way to the biotic degradation of HC's. Knowledge about biotic degradation processes should not be underrated for its significance in the treatment of HC-contaminations by means of microorganisms. (orig.) With 23 figs., 12 tabs.

4189 (IC–92/98) **Inversion of resistivity soundings in the archaeological site of Mahilaka (North-West of Madagascar) using the generalized linear inverse method.** Ratsimbazafy, J.B. (International Centre for Theoretical Physics, Trieste (Italy)); Randrianambinina, E. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 12p. Order Number DE93607100. Source: OSTI; NTIS (US Sales Only); INIS.

This paper describes the generalized inverse method which is used for the inversion of resistivity sounding. The technique has been applied to a resistivity soundings survey whose stations are selected in the zones of resistivity anomalies over an archaeological site. The site covers an area of 0.75 square kilometer in the north-western part of Madagascar, bordering the east Mozambic Channel. The one-dimensional (1-D) model fits well the observed data and the generalized linear inverse method appears to be a powerful scheme with which to interpret resistivity sounding data. (author). 29 refs, 6 figs.

4192 (INIS-BR–2966) **Determination in soils of soluble uranium fraction in acid medium by fission tracks registration techniques.** Fernandes, G.P. Instituto Militar de Engenharia (IME), Rio de Janeiro, RJ (Brazil). 1980 125p. (In Portuguese). Order Number DE93607114. Source: OSTI; NTIS (US Sales Only); INIS.

The fission tracks registration technique was used to determine the concentration of uranium in soil solutions. The Makrofol KG, a synthetic plastic manufactured by Bayer, was used as a detector and the wet method was applied. The method was applied to a few samples of soils from Pocos de Caldas, Minas Gerais in Brazil. The concentrations of uranium in the samples and residues were also determined by other methods to compare the results obtained; only one sample showed deviation among the results obtained by the fission tracks method. (author).

4193 (INIS-BR–2969) **Determination of some main elements and traces by x-ray fluorescence analysis in silicate**

rocks: a comparative study of two analytical techniques. Andrade, M.D. de. Bahia Univ., Salvador, BA (Brazil). 1977 127p. (In Portuguese). Order Number DE93607115. Source: OSTI; NTIS (US Sales Only); INIS.

The determinations of silicon, magnesium, iron, potassium, calcium, titanium, manganese, barium, strontium, rubidium, zirconium and scandium in felsic and mafic rocks, by X ray fluorescence analysis are presented. (author).

4194 (INIS-BR–3013) **Geophysical studies of ilmenite and monazite placers in Itaparica Island - Bahia State.** Cerqueira Neto, J.X. Bahia Univ., Salvador, BA (Brazil). 1976 112p. (In Portuguese). Order Number DE93607116. Source: OSTI; NTIS (US Sales Only); INIS.

A ground scintillometric survey along the southern shores of the island of Itaparica, Bahia, Brazil, discovered numerous anomalies. Detailed geophysical and sedimentological studies proved that the major anomaly is due to an ilmenite placer deposit. A comparison of the field geophysical measurements (ground scintillometry, magnetics and induced polarization) with the laboratory samples suggests the following: (i) Ground scintillometry is suitable for locating and delineating such placer deposits. (ii) Induced polarization is useful to investigate the deposit at depth. (iii) Magnetic surveys were not particularly useful in spite of the high ilmenite concentration, thus they do not appear to be a helpful survey tool in this case. A more extensive prospecting program in the Brazilian coastal areas particularly in the State of Bahia are also proposed. (author).

4195 (INIS-BR–3018) **Simultaneous bulk density and soil moisture determination by attenuation of ^{137} Cs and ^{241} Am.** Barros Ferraz, E.S. de. Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz. 1974 129p. (In Portuguese). Order Number DE93607117. Source: OSTI; NTIS (US Sales Only); INIS.

The method of simultaneous bulk density and soil moisture determination by attenuation of ^{241} Am and ^{137} Cs gamma-radiation is introduced and studied with detail. Theoretical considerations are made about the attenuation process in the absorbers, the form of solving the problem of two unknowns, the sensitivity of the method the influences of the resolution time of the electronic counting equipment, and of the Compton scattering in the sample. From the methodological point of view studies are made about the influence of the geometry, adjustment of counting system, choice of radiation sources, attenuation coefficient and the manner of obtaining reliable measurements. Data obtained are analysed, discussed and compared with those found in the literature. Finally the author presents some applications of the method, its use in soil-water movement studies, in soil profile compaction studies, and specially in swelling soils. (author).

4196 (INIS-BR–3049) **Characterization of Rn-222 production in Campo do Cercado C/09 Pocos de Caldas, Minas Gerais State.** Pereira, E.B. Sao Paulo Univ., SP (Brazil). Inst. Astronomico e Geofisico. 1977 128p. (In Portuguese). Order Number DE93607104. Source: OSTI; NTIS (US Sales Only); INIS.

A systematic study for correlating the Rn-222 escape with the main geochemical and mineralogical factors for understanding of some change processes from uranium deposits in Campo do Cercado C-09 in Pocos de Caldas, Minas Gerais State is described. (author).

4197 (INIS-mf–14091) **Radiation monitoring in the surroundings of the nuclear facilities of Baden-Wuerttemberg. Annual report 1990.** Landesanstalt fuer Umweltschutz Baden-Wuerttemberg, Karlsruhe (Germany). 1991 278p. (In German). Order Number DE93729096. Source: OSTI; NTIS (US Sales Only); INIS.

Measurements of the radioactivity of environmental samples (air, water, food chains, direct radiation) were taken by Landesanstalt fuer Umweltschutz for determination and monitoring of the ground level concentrations of pollutants in the surroundings of nuclear facilities. The 1990 results obtained for the sites of Baden-Wuerttemberg were compiled and published. The individual measurements are listed for each site by the samples taken and by quarters of the year. (BBR).

4199 (Juel–2624) **Extraction of PAH and PCB for sanitation of contaminated soils using supercritical fluids.** Sielschott, W. Forschungszentrum Juelich GmbH (Germany). Inst. fuer Chemie 4 - Angewandte Physikalische Chemie; Technische Hochschule Aachen (Germany). May 1992. 98p. (In German). Order Number DE93728904. Source: OSTI; NTIS (US Sales Only).

Supercritical PAH and PCB extraction was investigated in doped model soils and real sites of long-standing pollution. An existing extraction system was reconstructed for this purpose and modified for direct observation of the extraction kinetics. The influence of pressure, temperature and fluid density on extraction was determined. The extraction rate can be improved by adding a few per cent of methanol or ethanol as entrainer. A similar effect is achieved with dinitrogen oxide, which has a selective improving effect in the extraction of higher PAH as compared with CO_2. (orig.).

4200 (KAERI-NEMAC/RR–38/91) **Evaluation of structural behavior geological and hydrogeological characteristics: A study on the ground water flow and hydrogeological interaction in fractured rock masses.** Ahn, Jong Sung (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Kim, Chun Soo; Yun, Si Tae; Kim, Sun Joon; Kim, Gye Nam; Jung, Chan Ho; Kim, Jin Se. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Mar 1992. 149p. (In Korean). Order Number DE93607140. Source: OSTI; NTIS (US Sales Only); INIS.

Characterization of groundwater flow system and geochemistry of Gneissic rock in the vicinity of Chungyang area, an imaginary nuclear waste repository site, was carried out. Mineralogical, chemical compositions and textures of country rock and fracture-filling minerals were analyzed by petrological microscope, X-ray diffractometer and electron micro-probe analyzer. Such petrological and mineralogical properties of gneissic rock can serve as a database for the study of retardation of radioactive nuclide transport. Characteristics and interactions among rain water, surface water and groundwater were discussed based on chemical and isotope compositions of water samples. In-situ hydraulic dispersion test using tritium was carried out and the result was compared to that of NaCl. Hydraulic head distribution, flow time, flow direction and flow rate were calculated using a numerical model, FEMWATER, which were verified by another model, TRAFRAP. Since the flow times of groundwater from surface to groundwater table were calculated to be 17 and 27 year, depending on flow paths respectively, it is expected that the area down to EL.(+)220m from the surface is unsafe for the construction of waste repository. (Author).

4201 (KFK-PEF–93) **Uptake and localization of nutritive and potentially toxic minerals in ectomycorrhizas of forest trees.** Kottke, I. (Tuebingen Univ. (Germany). Botanisches Inst.); Oberwinkler, F. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). May 1992. 28p. (In German). Contract EC 87/010/1A. Order Number DE93728952. Source: OSTI; NTIS (US Sales Only).

Mycorrhizas of Norway spruce were analysed by means of electron energy loss spectroscopy (EELS/ESI) on TEM 902 ZEISS in respect to distribution of aluminium, calcium, phosphorus and cadmium after exposure of the objects to enhanced concentrations of the elements. Exclusion mechanism in mycorrhizas for aluminium and other toxic elements can be derived from the results and reveal buffering capacity for noxic soil ions attained by mycorrhization. Polyphosphates in hyphal vacuoles are shown to be important

sites for detoxification. The precise localization of elements yields valuable information not otherwise attainable. (orig.) With 20 figs., 61 refs.

4202 (LA–12195-MS) **Determination of 100-year floodplain elevations at Los Alamos National Laboratory.** McLin, S.G. Los Alamos National Lab., NM (United States). Aug 1992. 83p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93001895. Source: OSTI; NTIS; GPO Dep.

Includes MOSS source codes and data files on two 3.5 inch diskettes.

Under existing permit requirements. the US Environmental Protection Agency stipulates that facilities regulated by the Resource Conservation and Recovery Act must delineate all 100-yr floodplain elevations within their boundaries. At Los Alamos these floodplains are located within ungaged watersheds that drain Pajarito Plateau. This report documents the floodplain computational mapping procedure and, along with supporting maps, is untended to satisfy this permit requirement.

4203 (LBL–32021) **Alternative formulations of the Laplace transform boundary element (LTBE) numerical method for the solution of diffusion-type equations.** Moridis, G. Lawrence Berkeley Lab., CA (United States). Mar 1992. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-920664–2: 7. international conference on boundary element technology, Albuquerque, NM (United States), 3-5 Jun 1992). Order Number DE92041172. Source: OSTI; NTIS; GPO Dep.

The Laplace Transform Boundary Element (LTBE) method is a recently introduced numerical method, and has been used for the solution of diffusion-type PDEs. It completely eliminates the time dependency of the problem and the need for time discretization, yielding solutions numerical in space and semi-analytical in time. In LTBE solutions are obtained in the Laplace spare, and are then inverted numerically to yield the solution in time. The Stehfest and the DeHoog formulations of LTBE, based on two different inversion algorithms, are investigated. Both formulations produce comparable, extremely accurate solutions.

4204 (NSS-R–213) **The use of tracer techniques in the study of soil water flows and contaminant transport.** Reeves, A.D. (Lancaster Univ. (United Kingdom). Centre for Research on Environmental Systems); Beven, K.J. United Kingdom Nirex Ltd., Harwell (United Kingdom). Apr 1990. 59p. (CRES-TR–8912/04.). Order Number DE93607105. Source: OSTI; NTIS (US Sales Only); INIS.

This report reviews the use of different types of tracers in the characterisation of soil water flows and the implications of tracer studies for modelling contaminant transport. The tracers considered are a number of different anions, stable isotopes, radioactive tracers, organic dyes, fluorocarbons, gases, solid particles and water temperature. The theoretical basis for modelling the results of tracer experiments in terms of the traditional convective-dispersion equation (CDE) is outlined. A number of alternative modelling strategies are reviewed: the mobile/immobile water extension of the CDE; the Jury Transfer Function Model (TFM); the Aggregated Mixing Zone (AMZ) model and Random Particle Tracking models. The first will form the basis of the Systeme Hydrologique Europeen (SHE) contaminant transport component. The Jury and AMZ models are both linear models and are consequently limited to applications in which the flows may be considered to be quasi-steady or repeatable. Random particle tracking models have the advantage of both flexibility and applicability to transient and spatially variable flow domains. A random particle model is being implemented on a transputer workstation at Lancaster and will be used to explore the effect of sub-grid scale complexities on effective grid-scale parameter values for distributed models such as SHE. (author).

4205 (NSS-R–269) **Laboratory studies of flow and transport in single fractures: Pt. 1: Artificial fracture and granite block experiments.** Braney, M.C. (AEA Decommissioning and Radwaste, Harwell (United Kingdom)); Cliffe, K.A.; Gilling, D.; Jefferies, N.L.; Lineham, T.R. United Kingdom Nirex Ltd., Harwell (United Kingdom). Jun 1991. 38p. Order Number DE93607106. Source: OSTI; NTIS (US Sales Only); INIS.

An assessment of the safety of disposing of radioactive waste in an underground repository requires an understanding of radionuclide transport mechanisms in the geosphere. In hard rocks, such as granite and slate, essentially all water flow takes place through a fracture network. This report describes two preliminary laboratory-scale experiments undertaken in order to develop a methodology for investigating flow and transport in single fractures. The first experiment was designed to investigate flow and transport in an 'artificial' sandstone fracture. The second experiment was designed to investigate flow and transport in a natural fracture in a granite block. Experimental data have been analysed using a mathematical model that describes flow and transport in a single fracture. In the case of the artificial fracture, good fits between experimental data and model predictions (including incorporation of rock-matrix diffusion) have been obtained. In the case of the natural granite fracture, discrepancies between data and model prediction have been demonstrated to be due to significant channelling of flow over the fracture surface. Finally, a number of areas where improvements should be made in future block-scale tracer migration experiments are discussed. (author).

4206 (ORNL/ER–124) **Annual report of the Environmental Restoration Monitoring and Assessment Program at Oak Ridge National Laboratory for FY 1992: Environmental Restoration Program.** Clapp, R.B. (ed.). Oak Ridge National Lab., TN (United States). Sep 1992. 211p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93000588. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental Sciences Division 3945.

This report summarizes the salient features of the annual efforts of the investigations and monitoring, conducted to support the Environmental Restoration (ER) Program at Oak Ridge National Laboratory (ORNL). The results presented can be used to develop a conceptual understanding of the key contaminants and the sources, fluxes, and processes affecting their distribution and movement. This information forms a basis for prioritizing sites and for selecting, implementing, and evaluating remedial actions. Groundwater, soils, sediments, and surface water monitoring results are described.

4207 (PNL–8300) **Sampling and analysis of sediments in dredged material from Wilma Uplands Disposal Site.** Pinza, M.R. (Battelle/Marine Sciences Lab., Sequim, WA (United States)); Karle, L.M.; Mayhew, H.L.; Word, J.Q. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 25p. The Lower Granite Reservoir provides slack-water navigation for the Lewiston, Idaho, and Clarkston, Washington area. The levee system associated with the reservoir protects industrial, commercial, and residential areas from inundation of waters impounded behind the dam. Sediment deposition at the confluence of the Snake and Clearwater rivers has required frequent dredging events In past years, Including two recent events in 1986 and 1987. Dredged material from the 1986 and 1987 events was placed in three containment ponds located on the north bank of the Snake River, near River Mile 134.7. The ponds were used to hold approximately 400,000 cubic yards of dredged material removed from the port areas at the confluence of the Snake and Clearwater rivers. Prior to dredging, the river sediments were tested and found to be typical of non-contaminated sediment. Since that testing, dioxins and furans have been found in the effluent from a Kraft pulp mill in Lewiston that discharges directly into the confluence of the Snake and Clearwater rivers. The US Army Corps of Engineers (USACE) believed that dredged material placed in the containment ponds may contain contaminated levels of dioxins and furans. At their request, Battelle/Marine Sciences Laboratory (MSL) sampled sediments from these ponds and performed a chemical analysis.

4208 (PNL-SA–20750) **Innovative technology demonstrations.** Anderson, D.B. (Pacific Northwest Lab., Richland, WA (United States)); Luttrell, S.P.; Hartley, J.N.; Hinchee, R. Pacific Northwest Lab., Richland, WA (United States). Aug 1992. 10p.

Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920851–80: Spectrum '92: nuclear and hazardous waste management international topical meeting, Boise, ID (United States), 23-27 Aug 1992). Order Number DE93001306. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental Management Operations (EMO) is conducting an Innovative Technology Demonstration Program for Tinker Air Force Base (TAFB). Several innovative technologies are being demonstrated to address specific problems associated with remediating two contaminated test sites at the base. Cone penetrometer testing (CPT) is a form of testing that can rapidly characterize a site. This technology was selected to evaluate its applicability in the tight clay soils and consolidated sandstone sediments found at TAFB. Directionally drilled horizontal wells was selected as a method that may be effective in accessing contamination beneath Building 3001 without disrupting the mission of the building, and in enhancing the extraction of contamination both in ground water and in soil. A soil gas extraction (SGE) demonstration, also known as soil vapor extraction, will evaluate the effectiveness of SGE in remediating fuels and TCE contamination contained in the tight clay soil formations surrounding the abandoned underground fuel storage vault located at the SW Tanks Site. In situ sensors have recently received much acclaim as a technology that can be effective in remediating hazardous waste sites. Sensors can be useful for determining real-time, in situ contaminant concentrations during the remediation process for performance monitoring and in providing feedback for controlling the remediation process. Following the SGE demonstration, the SGE system and SW Tanks test site will be modified to demonstrate bioremediation as an effective means of degrading the remaining contaminants in situ. The bioremediation demonstration will evaluate a bioventing process in which the naturally occurring consortium of soil bacteria will be stimulated to aerobically degrade soil contaminants, including fuel and TCE, in situ.

4209 (UCRL-ID–112027) **Site characterization report for HRMP monitoring well UE20bh-1, Nye County, Nevada Test Site.** Boyd, O.S.; Wagoner, J.L.; Carlson, R.C. Lawrence Livermore National Lab., CA (United States). Jul 1992. 97p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93003332. Source: OSTI; NTIS; GPO Dep.

This document is a summary of the geological investigation of and geophysical logging data acquired in well UE20bh-1 of the Hydrologic Radionuclide Migration Program (HRNP). It describes the geologic setting of the UE20bh-1 site and discusses each geophysical log and processing history. We also provide a preliminary correlation of the logging data with the stratigraphic section encountered in the drill hole.

4210 (VTT-SYMP–126) **Ground water modelling.** Leino-Forsman, H.; Olin, M. (eds.). Technical Research Centre of Finland, Espoo (Finland). 1991. 156p. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). Order Number DE93607107. Source: OSTI; NTIS; INIS.

The first Seminar on Groundwater Modelling was arranged by VTT (Reactor Laboratory) in Espoo Finland in May 1991. The one day seminar dealt both with modelling of geochemistry and transport of groundwater, as well as mathematical methods for modelling. The seminar concentrated on giving a broad picture of the applications of groundwater modelling e.g. nuclear waste, groundwater resources including artificial groundwater and pollution. The participants came from research institutes and universities as well as engineering companies. Articles are published in Finnish with English abstracts.

4211 (VTT-SYMP–126, pp. 122-127) **Use of groundwater models at the National Board of Waters and the Environment.** Granlund, K. (National Board of Waters and the Environment, Helsinki (Finland)). Technical Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling.* 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

The National Board of Waters and the Environment has carried out several studies to provide more information about the quantity and quality of Finnish groundwaters. At the beginning of 1990 a special project was set up at the technical research office to develop mathematical groundwater models suitable for Finnish hydrogeological conditions. Such models can be used for evaluating the drawdown of the groundwater table due to extraction and calculating the pathways of polluted groundwaters. Groundwater models are important tools in managing groundwater resources to meet long-term human and environmental needs.

4212 (WHC-EP–0573) **Westinghouse Hanford Company environmental surveillance annual report: Calendar year 1991.** Schmidt, J.W.; Johnson, A.R.; McKinney, S.M.; Perkins, C.J.; Webb, C.R. Westinghouse Hanford Co., Richland, WA (United States). Jul 1992. 378p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE93001668. Source: OSTI; NTIS; INIS; GPO Dep.

This document presents the results of near-facility operational environmental monitoring in 1991 of the 100, 200/600, and 300/400 Areas of the Hanford Site, in south-central Washington State, as performed by Westinghouse Hanford Company. These activities are conducted to assess and to control the impacts of operations on the workers and the local environment and to monitor diffuse sources. Surveillance activities include sampling and analyses of ambient air, surface water, groundwater, sediments, soil, and biota. Also, external radiation measurements and radiological surveys are taken at waste disposal sites, radiologically controlled areas, and roads.

4213 (WINCO–11860) **Sequential extraction evaluation of soil washing for radioactive contamination.** Gombert, D. Westinghouse Idaho Nuclear Co., Inc., Idaho Falls, ID (United States). [1992]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-84ID12435. (CONF-9209229–1: Industrial and engineering chemistry (I&EC) special symposium of the American Chemical Society (ACS), Atlanta, GA (United States), 21-23 Sep 1992). Order Number DE92041326. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes an experimental plan for evaluating soil washing technology for potential application to radioactively contaminated soils at the Idaho National Engineering Laboratory (INEL). The sequential extraction methodology is based on micronutrient bioavailability studies wherein the soil matrix is chemically dissected to selectively remove particular fixation mechanisms independently. A mechanism-specific extractant has the potential for greater removal efficiency than a broad-spectrum extractant, such as acid, while using a less aggressive chemistry and reducing resultant water treatment and dissolved solids handling problems.

4214 (WSRC-IM–91-28-Summ.) **Savannah River Site Environmental Report for 1990: Summary pamphlet.** Cummings, C.L.; Martin, D.K.; Todd, J.L. Westinghouse Savannah River Co., Aiken, SC (United States). [1991]. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93000455. Source: OSTI; NTIS; INIS; GPO Dep.

The SRS publishes the Environmental Report each year to communicate the endings of the environmental monitoring and research programs to the public and government agencies. This pamphlet is intended to summarize important environmental activities at the Savannah River Site in 1990. Highlights include: In 1990, over 40,000 samples of environmental material were collected for radiological and nonradiological analyses. The largest radiation doses to the surrounding population were from the radionuclide "tritium," which was released to air and water from SRS operations.; tritium concentrations measured near the site in air, rainwater, Savannah River water, milk from local dairies and downriver drinking water were higher than background levels; the maximum radiation dose to individuals offsite was estimated to be 0.16 millirem from atmospheric releases of radioactivity, and 0.17 millirem from liquid releases of radioactivity. There was one accidental release of tritium to air on February 7, when 100 curies were released from a K-Area stack. The maximum radiation dose offsite was calculated to be 0.003 millirem (mrem); SRS issued a detailed report on the impact of routine and accidental releases of tritium from 1964 to 1988 on the environment. Currently, SRS investigating possible causes for higher concentrations of mercury found in fish caught onsite, compared to those taken from the Savannah River. Mercury concentrations have been higher in onsite

fish since 1989; and, n response to concerns expressed by the Georgia Department of Natural Resources (GDNR) over concentrations of radionuclides in fish collected from the Savannah River, the Savannah River Site is working with the GDNR to resolve technical issues regarding sampling and analyses of fish from the river and the resultant dose calculations.

4215 (WSRC-MS–92-214) **Delineate subsurface structures with ground penetrating radar.** Wyatt, D.E. (Westinghouse Savannah River Co., Aiken, SC (United States)); Hu, L.Z.; Ramaswamy, M.; Sexton, B.G. Westinghouse Savannah River Co., Aiken, SC (United States). [1992]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. (CONF-9210171–1: Eastern regional groundwater issues conference, Boston, MA (United States), 13 Oct 1992). Order Number DE93000474. Source: OSTI; NTIS; INIS; GPO Dep.

High resolution ground penetrating radar (GPR) surveys were conducted at the Savannah River Site in South Carolina in late 1991 to demonstrate the radar techniques in imaging shallow utility and soil structures. Targets of interest at two selected sites, designated as H- and D-areas, were a buried backfilled trench, buried drums, geologic stratas, and water table. Multiple offset 2-D and single offset 3-D survey methods were used to acquire high resolution radar data. This digital data was processed using standard seismic processing software to enhance signal quality and improve resolution. Finally, using a graphics workstation, the 3D data was interpreted. In addition, a small 3D survey was acquired in The Woodlands, Texas, with very dense spatial sampling. This data set adequately demonstrated the potential of this technology in imaging subsurface features.

4216 (WSRC-RP–89-1199) **Groundwater quality assessment/corrective action feasibility plan: Savannah River Laboratory Seepage Basins.** Stejskal, G.F. Westinghouse Savannah River Co., Aiken, SC (United States). 15 Nov 1989. 317p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93000787. Source: OSTI; NTIS; GPO Dep.

The Savannah River Laboratory (SRL) Seepage Basins are located in the northeastern section of the 700 Area at the Savannah River Site. Currently the four basins are out of service and are awaiting closure in accordance with the Consent Decree settled under Civil Act No. 1:85-2583. Groundwater monitoring data from the detection monitoring network around the SRL Basins was recently analyzed using South Carolina Hazardous Waste Management Regulations R.61-79.264.92 methods to determine if groundwater in the immediate vicinity of the SRL Basins had been impacted. Results from the data analysis indicate that the groundwater has been impacted by both volatile organic constituents (VOCs) and inorganic constituents. The VOCs, specifically trichloroethylene and tetrachloroethylene, are currently being addressed under the auspices of the SRS Hazardous Waste Permit Application (Volume III, Section J.6.3). The impacts resulting from elevated levels of inorganic constituent, such as barium, calcium, and zinc in the water table, do not pose a threat to human health and the environment. In order to determine if vertical migration of the inorganic constituents has occurred three detection monitoring wells are proposed for installation in the upper portion of the Congaree Aquifer.

4217 (WSRC-RP–92-250) **Cesium in the Savannah River Site environment.** Carlton, W.H.; Bauer, L.R.; Evans, A.G.; Geary, L.A.; Murphy, C.E. Jr.; Pinder, J.E.; Strom, R.N. Westinghouse Savannah River Co., Aiken, SC (United States). Mar 1992. 98p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93000390. Source: OSTI; NTIS; INIS; GPO Dep.

Cesium in the Savannah River Site Environment is published as a part of the Radiological Assessment Program (RAP). It is the fourth in a series of eight documents on individual radioisotopes released to the environment as a result of Savannah River Site (SRS) operations. The earlier documents describe the environmental consequences of tritium, iodine, and uranium. Documents on plutonium, strontium, carbon, and technetium will be published in the future. These are dynamic documents and current plans call for revising and updating each one on a two-year schedule.Radiocesium exists in the environment as a result of above-ground nuclear weapons tests, the Chernobyl accident, the destruction of satellite Cosmos 954, small releases from reactors and reprocessing plants, and the operation of industrial, medical, and educational facilities. Radiocesium has been produced at SRS during the operation of five production reactors. Several hundred curies of ^{137}Cs was released into streams in the late 50s and 60s from leaking fuel elements. Smaller quantities were released from the fuel reprocessing operations. About 1400 Ci of ^{137}Cs was released to seepage basins where it was tightly bound by clay in the soil. A much smaller quantity, about four Ci. was released to the atmosphere. Radiocesium concentration and mechanisms for atmospheric, surface water, and groundwater have been extensively studied by Savannah River Technology Center (SRTC) and ecological mechanisms have been studied by Savannah River Ecology Laboratory (SREL). The overall radiological impact of SRS releases on the offsite maximum individual can be characterized by total doses of 033 mrem (atmospheric) and 60 mrem (liquid), compared with a dose of 12,960 mrem from non-SRS sources during the same period of time. Isotope ^{137}Cs releases have resulted in a negligible risk to the environment and the population it supports.

4218 (WSRC-RP–92-482) **Vegetation survey of Pen Branch and Four Mile Creek wetlands.** Westinghouse Savannah River Co., Aiken, SC (United States); Dames and Moore, Los Angeles, CA (United States). [1992]. 435p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93000495. Source: OSTI; NTIS; GPO Dep.

One hundred-fifty plots were recently sampled (vegetational sampling study) at the Savannah River Site (SRS). An extensive characterization of the vascular flora, in four predetermined strata (overstory, Understory, shrub layer, and ground cover), was undertaken to determine dominance, co-dominance, and the importance value (I.V.) of each species. These results will be used by the Savannah River Laboratory (SRL) to evaluate the environmental status of Four Mile Creek, Pen Branch, and two upland pine stands. Objectives of this study were to: Describe in detail the plant communities previously mapped with reference to the topography and drainage, including species of plants present: Examine the successional trends within each sampling area and describe the extent to which current vegetation communities have resulted from specific earlier vegetation disturbances (e.g., logging and grazing); describe in detail the botanical field techniques used to sample the flora; describe the habitat and location of protected and/or rare species of plants; and collect and prepare plant species as herbarium quality specimens. Sampling was conducted at Four Mile Creek and Pen Branch, and in two upland pine plantations of different age growth.

4219 (YJT–92-04) **Diffusion in the rock matrix - a review of laboratory tests and field studies.** Valkiainen, M. (Technical Research Centre of Finland, Espoo (Finland). Reactor lab.). Voimayhtioeiden Ydinjaetetoimikunta, Helsinki (Finland). Apr 1992. 57p. Order Number DE93607108. Source: OSTI; NTIS; INIS.

The radionuclides released from an underground repository of radioactive waste quarried deep into bedrock, will be transported by groundwater along existing open fracture networks. Transport will be retarded by sorption and diffusion in the rock matrix. There has been quite a lot of research related to the matrix properties of various rock types and related theoretical aspects in the last decade. The report contains a brief review on the research work and results on the matrix diffusion in the rocks. The aim is to evaluate the evidence of matrix diffusion and to assess parameters related to the diffusion in rock. There are a lot of laboratory results on rock samples indicating that porosity as such seems to be continuous through granitic rocks even if the lithostatic pressure comparable to the repository depth is taken into account. On the other hand many of the observed alternated zones and concentration profiles observed in nature seem to have limited depth dimension. More evidence is needed to explain in which conditions porosity is open and which conditions closed. Anion exclusion is found to have an effect on matrix diffusion. When taken into account in the pore diffusion model, the porosity effectively decreases from the the value applicable for water. The exclusion effect is stronger in dilute solutions. The effective porosity for anions can be ten times smaller in dilute solutions, such as some groundwaters, compared to solutions of high salinity.

4220 (YJT–92-06) **Bedrock model of the Romuvaara area: Summary report.** Saksa, P. (ed.) (Saanio and Riekkola Consulting Engineers, Helsinki (Finland)); Ahokas, H.; Paananen, M.; Paulamaeki, S.; Anttila, P.; Pitkaenen, P.; Fr. Voimayhtioeiden Ydinjaetetoimikunta, Helsinki (Finland). May 1992. 129p. Order Number DE93607142. Source: OSTI; NTIS; INIS.

Site for the final disposal of the spent nuclear fuel investigations implemented in accordance with the research programme drawn up by Teollisuuden Voima Oy were carried out at Romuvaara, Kuhmo, in 1987 - 1991. Model of the site were compiled and used for describing the rock types, fractures, fracturing structures and geohydrological conditions, the main emphasis being on the examination of the bedrock fracturing and related hydraulic conductivity. Three-dimensional models were used for the classification of the various properties of the bedrock structures. The descriptive models were gathered together in a computerized system to facilitate illustration and strage. The rock types at Romuvaara are gneiss, mica gneiss, leucotonalite gneiss, amphibolite, granodiorite and metadiabase. The structural model for fracturing at the site contains 19 zones described in terms of a number of properties. The fracturing observed at Romuvaara ranges from local occurences of dence fracturing to significant, altered fracture zones. The structural model includes deduced values for hydraulic conductivity, deduced points of flow in the boreholes and measured hydraulic heads.Various classifications were used for assessment of hydraulic conductivity in the zones and solid bedrock, and in both cases conductivity was found to diminish with depth. Measured hydraulic heads were mostly found to support structural interpretation. The results were used for estimation of a three-dimensional hydraulic head distribution. Results from pumping tests carried out in the significant flow zone support the geometric interpretation.

4221 (YJT–92-07) **The Geology of the Kivetty area: Summary report.** Anttila, P. (ed.) (Imatran Voima Oy, Vantaa (Finland)); Paulamaeki, S.; Lindberg, A.; Paananen, M.; Koistinen, T.; Front, K.; Pitkaenen, P. Voimayhtioeiden Ydinjaetetoimikunta, Helsinki (Finland). May 1992. 74p. Order Number DE93607143. Source: OSTI; NTIS; INIS.

Teollisuuden Voima Oy (TVO) is preparing for the final disposal of spent nuclear fuel from the Olkiluoto nuclear power plant (TVO-I and TVO-II) deep in the Finnish bedrock. Kivetty in Konginkangas was one of the five areas selected in 1987 for preliminary site investigations for this purpose. The Kivetty area in Central Finland is located in a Svecokarelian granitoid environment consisting of a complex of synorogenic granitoids 1900 - 1860 million years in age. The bedrock consists almost entirely of plutonic rocks, i.e. gabbro, porphyritic granodiorite and granite, eguigranular granodiorite and granite, listed in order of age. The majority of the rock types are porphyritic in character, and supracrustal rocks such as quartz-feldspar schist and gneiss are found occasionally in small xenoliths.

4222 (YJT–92-10) **Creep in crystalline rock with application to high level nuclear waste repository.** Eloranta, P. (Helsinki Univ. of Technology, Espoo (Finland). Lab. of Rock Engineering); Simonen, A.; Johansson, E. Voimayhtioeiden Ydinjaetetoimikunta, Helsinki (Finland). Jun 1992. 47p. Order Number DE93607144. Source: OSTI; NTIS; INIS.

The time-dependent strength and deformation properties of hard crystalline rock are studied. Theoretical models defining the phenomena which can effect these properties are reviewed. The time-dependent deformation of the openings in the proposed nuclear waste repository is analysed. The most important factors affecting the subcritical crack growth in crystalline rock are the stress state, the chemical environment, temperature and microstructure of the rock. There are several theoretical models for the analysis of creep and cyclic fatigue: deformation diagrams, rheological models thermodynamic models, reaction rate models, stochastic models, damage models and time-dependent safety factor model. They are defective in describing the three-axial stress condition and strength criteria. In addition, the required parameters are often too difficult to determine with adequate accuracy. Therefore these models are seldom applied in practice. The effect of microcrack- driven creep on the stability of the work shaft, the emplacement tunnel and the capsulation hole of a proposed nuclear waste repository was studied using a numerical model developed by Atomic Energy of Canada Ltd. According to the model, the microcrack driven creep progresses very slowly in good quality rock. Poor rock quality may accelerate the creep rate. The model is very sensitive to the properties of the rock and secondary stress state. The results show that creep causes no stability problems on excavations in good rock. The results overestimate the effect of the creep, because the analysis omitted the effect of support structures and backfilling.

4223 (BNL–47921) **Fast repetition rate (FRR) fluorometer for making in situ measurements of primary productivity.** Kolber, Z.S.; Falkowski, P.G. Brookhaven National Lab., Upton, NY (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-921066–1: Oceans '92, Newport, RI (United States), 26-29 Oct 1992). Order Number DE92041318. Source: OSTI; NTIS; GPO Dep.

Understanding the ocean carbon cycle and predicting how climate-induced changes in ocean circulation will affect ocean productivity requires that (a) primary productivity be measured with high spatial and temporal resolution, and (b) natural variability in primary productivity be parameterized with regardto environmental factors such as nutrient availabuity, irradiance, and temperature. Instrumentation to measure primary productivity from the stimulated in vivo fluoresence of phytoplankton chlorophyll is currendy being developed at Brookhaven National Laboratory. The instrumentation is based on fast repetition rate (FRR) fluorometry, and provides a robust technique for deriving the photosynthetic rates in situ. Moreover, the FRR methodology directly measures several photosynthetic parameters such as effective absorption cross- section, photo-conversion efficiency, and turnover time of photosynthesis, and relate them to primary productivity. Since photosynthetic parameters are affected by environmental factors such as fight and nutrient availability, the relationship between these parameters and primary productivity can be established. By understanding such relationships, prognostic models of primary productivity can be developed and parameterized.

4224 (BNWL-SA–4662) **^{55}Fe concentration and specific activities in north Pacific marine organisms.** Jenkins, C.E.; Langford, J.C. Battelle Pacific Northwest Lab., Richland, WA (United States). [1972]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93001727. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The ^{55}Fe from nuclear weapons testing which enters the ocean is in a chemical form which is much more readily available for biological uptake than is stable oceanic iron. This property of ^{55}Fe results in up to 1000-fold higher ^{55}Fe specific activities in marine organisms than is present in seawater. Dilution of ^{55}Fe by stable iron from anthropogenic sources or natural sources appears to be responsible for the lower specific activity in mid-latitude marine organisms than in organisms from high latitudes. The half-time for ^{55}Fe in harvested salmon from the west coast is essentially the same as the half-residence time for stratospheric radioactive debris. This fact suggests that ^{55}Fe reaching the ocean surface is available for biological uptake for a relatively short time. Measurements of ^{55}Fe specific activities in certain crustacea predacious fish than in the phytoplankton. What we have learned about the behavior of the radionuclide ^{55}Fe in the ocean environment may well apply to other fallout radionuclides, and a consideration of this fact should be included in estimating the potential hazard of the release of radionuclides to the marine environment. These data suggest that the release of radioiron from a reactor to the oceans at northern latitudes may have a 10 to 30-fold greater impact than releases of radioiron at mid-latitudes.

4225 (CONF-910550–, pp. 709-723) **Degradation of munition wastes by Phanerochaete chrysosporium.** Sublette, K.L. (Univ. of Tulsa, OK (United States)); Ganapathy, E.V.; Schwartz, S. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

'Pink water' is a waste-water stream generated by munitions LAP (loading, assembly, and packing) operations. The major components of this waste water are trinitrotoluene (TNT) and cyclotrimethylene trinitramine (RDX) at concentrations of 120-175 mg/L and 25 mg/L, respectively. Currently, pink water is treated by activated carbon adsorption. Removal efficiencies of > 99.5% have been reported. However, this treatment method suffers a serious limitation in that the carbon cannot be safely regenerated. Loaded carbon is disposed of by incineration after a single use. The authors have demonstrated that TNT, RDX, simulated, and actual pink water can be effectively treated by Phanerochaete chrysosporium immobilized on the disks of a rotating biological contractor (RBC) in both batch and continuous modes. Greater than 90% removal of TNT from a simulated pink water was observed in a continuous RBC with a residence time of about 24 h. The disk area required was about 10,000 ft^2/gpM (4091 m^2/m^3h) feed. RDX was amenable to treatment, but RDX removal rates were somewhat slower. A full-scale treatment system was designed on the basis of laboratory data, and a cost analysis was performed. This analysis has shown that biotreatment of pink water can be a cost-effective alternative to carbon adsorption.

4226 (CONF-910550–, pp. 777-788) **Sorption of heavy metals by untreated red fir sawdust.** Bryant, P.S. (Washington State Univ., Pullman (United States)); Petersen, J.N.; Lee, J.M.; Brouns, T.M. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Equilibrium and rate relationships have been determined for the sorption of divalent copper (Cu^{2+}) and hexavalent chromium (Cr^{6+}) onto untreated Red Fir sawdust. For both ions, the equilibrium sorption levels were determined to be a function of the solution pH and temperature. The equilibrium adsorption capacity of the sawdust for Cu^{2+} was found to increase with increasing pH. However, for Cr^{6+} the sorption capacity increased with decreasing pH. For both ions, the rate of adsorption and the equilibrium adsorption capacity increased with temperature. The sorption capacity of α-cellulose was at least an order of magnitude less than the untreated sawdust.

4227 (CONF-910550–, pp. 801-809) **Acidogenic mine tailings: The use of biofilm bacteria to exclude oxygen.** Blenkinsopp, S.A. (Univ. of Calgary, Alberta (Canada)); Herman, D.C.; Costerton, J.W.; McCready, R.G.L. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Acid mind drainage (AMD) is an important contributor to the deterioration of surface and ground water quality via acidification, heavy metal pollution, and sedimentation. The National Stream Survey (NSS) conducted by the US Environmental Protection Agency found that approx 4590 km of streams in the mid-Atlantic and southeastern United States were acidic because of AMD and 5780 km were strongly impacted, although not acidic. AMD is the product of reactions between sulfide-containing mine tailings, air, and water, as demonstrated in the following equations: FeS_2 (S) + $7/2O_2 + H_2O = Fe^{2+} + 2SO_4^{2-} + 2H^+$ (1) $Fe^{2+} + 1/4O_2 + H^+ = Fe^{3+} + 1/2H_2O$ (2) $Fe^{3+} + 3H_2O = Fe(OH)_3$ (S) + $3H^+$ (3) FeS_2 (S) + $14Fe^{3+} + 8H_2O = 15\ Fe^{2+} + 2SO_4^{2-} + 16H^+$ (4). The rate of oxygen penetration into the surface pore spaces of tailings is believed to control the rate of acid generation. It is therefore critical to reduce the rate of oxygen penetration or eliminate it completely. Pyrite will remain in a reduced state if the tailings environment can be kept anaerobic. It is well known that bacterial and plant growth in the surface layers of soil can completely consume the available oxygen, causing the remainder of the soil profile to exist in an anaerobic state. It has also been well demonstrated that bacteria are very capable of reducing the permeability of rock matrices through cell growth and exopolymer production. Based on these principles, mine-tailings columns were 'top-dressed' in the laboratory with bacteria and nutrients to determine whether an oxygen-excluding surface layer could be established to prevent the development of AMD. This article presents the preliminary data.

4228 (CONF-9109358–, pp. 28) **An early example of pollution prevention: The case of the Polish metal finishing and coating industry.** Jackson, G.S. (US Agency for International Development (United States)). USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

An early attempt at imparting the Principles of Pollution Prevention took place in Poland on a project supported by the United Nations Industrial Development Organization (UNIDO) designed to reduce toxic metal pollutants from the metal finishing industry. Several plants were visited and a demonstration program was suggested at the Warsaw Fiat Automobile manufacturing plant (FSO). This demonstration program was offered to incorporate low cost in plant design changes, using existing equipment to reduce wastes and water consumption, such as countercurrent rinsing and fog rinsing, proper racking of work pieces and careful attention to toxics reduction and material recovery and substitution. The Polish ministry responsible for this task was the Institute of Mechanical Precision (IMP) in Warsaw. The program was estimated to save over $2 Million /yr and have a payoff time of less than six months. The program was never fully implemented, despite assurances from the highest levels of IMP and FSO including UNIDO sponsored training and research. The lesson to be drawn from this episode is clear: the 'hard' or technical side of pollution prevention, while important, is not sufficient with a strong commitment from the 'soft' or management side of the equation. The future looks promising if developing countries and their sponsoring AID agencies can heed these warnings.

4229 (CONF-9109358–, pp. 15) **Evaluation of non-point sources of surface water contamination.** Bradford, W.L. (Versar, Inc., Springfield, VA (United States)); Richards, J.N. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

A study of constituent concentrations and loadings to surface waters from various nonurban land-use areas was conducted over a 2 1/2-year period in the Monocacy River Basin, a drainage area of approximately 970 square miles (2512 km^2), in central Maryland, USA. The study focused on nutrients (nitrogen and phosphorus species), total suspended solids, and total and fecal coliforms, and examined statistically the concentrations and loadings in baseflow and stormflow as a function of land use, season, storm intensity, and farming practices. The results formed the baseline for evaluation of the effectiveness of future implementation of best management practices on farms to reduce nutrient and suspended solids loading to the Monocacy River and the Potomac River, and to reduce coliform loadings in local streams. The results of extensive statistical hypothesis testing on the data base using various parametric and non-parametric procedures showed patterns inconstituent concentrations and loadings between watersheds with the highest concentrations and loadings occurring in watersheds with 70% or more of the area devoted to farming, and from individual types of farms.

4230 (CONF-9109358–, pp. 18) **Anion exchange removal of cadmium-EDTA complexes.** Dedzinska, M.R. (Water and Wastewater Department Technical University of Lublin (Poland)); Pawlowski, L. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Because of ionic character of metal species in water solutions, ion exchange has been in the center of research attention as basic for metal removal processes. In natural water systems as well as in human created wastes there are more and more organic substances capable of acting as ligands for cation species, so the possibility of heavy metals existing in the simple cationic forms seems to be minimal. Among the organics capable of complexing metals are natural substances like humic and fulvic acids as well as manmade chelating agents like commonly used replacements of tripolyphosphate in household detergents - NTA and EDTA. EDTA is considered to be resistant to biodegradation, growing concentrations of EDTA in water streams lead to increased levels of trace metals in effluents from traditional treatment plants and may cause unexpected problems for humans.

4231 (CONF-9109358–, pp. 5) **Ozonation process with heterogeneous catalyst in barbotage column system.** Tosik, R. (Technical University of Lodz (Poland)); Wiktotowski, S. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Application of ozone for wastewaters purification depends on its utilization degree. It was stated that favorable ozone utilization degree conditions were in two joint reactors systems. Fine and great dispersion reactors were used in the two stage ozonation process for Direct Blue 84 solution decolorization. The catalyst was used in the great dispersion reactor as a fluidized phase.

4232 (CONF-9109358–, pp. 10) **Determination of harmful substances in the Liwiec river in Poland.** Jaroszylnska, J. (Agricultural and Teachers University, Siedlce (Poland)); Oprzadek, K.; Zalewski, W. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

The Liwiec river is 130 kms long. It is an affluent of the Bug river. The river wells in marshes and quagmires that are localized in the east of Siedlcd. It flows across typical agricultural areas far from towns. There are two places where communal sewers pollute the water of the Liwiec river (at the 31st and the 80th km of the river section). From January to May 1991 water in the Liwiec river was investigated at the 19th to 47th km river section. The samples were always taken in the same places in the vicinity of following villages: Wyczolki, Pruxzynek, Golice, Perzec, Chodow, Kisielany, Mokobody. The concentration of heavy metals (Fe, Mn, Zn, Cu, Ni, Co, Pb, Cd), chlorides, nitrates, nitrites, dissolved oxygen, biochemical oxygen demand (after five days), dissolved compounds and pH were analyzed. The results of the analysis are presented. The curves present an arithmetic mean results of the chemical analysis. The values of the admissible pollutants concentration for the three classes of the water purity in Poland and the obtained results of the chemical analysis of the Liwiec water are given. The obtained data helped to determine the purity of the Liwiec river as the second or third purity class.

4233 (CONF-9109358–, pp. 20) **The use of ion exchangers for the recovery of nickel from washery effluents after the process of nickel plating.** Jozwiak, A. (Technical University of Lodz (Poland)); Gorzka, Z. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

The results of equilibrium and dynamic investigations and the knowledge of the kinetics of the H^+/Ni^{2+} exchange for both the ion exchangers are decisive of the possibility of using the ion exchangers Wofatit KS-10 and Wofatit KPS for the removal of nickel ions form washery effluents. As effect of temperature on the rate of the H^+/Ni^{2+} exchange over the range of 293-313 K, of the acidity of the solution form 0 to 1.0 mole/dm^3 of HCL and of the initial concentration of Ni/II/over the range of 0.05-0.7 mole/dm^3 have been studied. The state of equilibrium was attained in all the experiments in the time of 2 hours. It has been found that the concentration of hydrochloric acid contained in the solution over the concentration range investigated does not affect the kinetics of the H^+/Ni^{2+} exchange but it has an effect on the equilibrium of the exchange. Basing on the investigations carried out it can be supposed the internal diffusion, that is transport of Ni/II/ions inside the ion exchanger is decisive of the rate of the H^+/Ni^{2+} exchange process under the conditions used in the experiments made both for Wofatit KS-10 and Wofatit KPS. Investigation was aimed at determination of the effect of the hydraulic load and the counterion effect on it. Over the range of loads of 4.3 - 16.8 m^3/m^{3}h no changes in the course of the H^+/Ni^{2+} exchange process were observed.

4234 (CONF-9206301–1) **Individual-based modeling of environmental quality effects on early life stages of fish: A case study using striped bass.** Rose, K.A. (Oak Ridge National Lab., TN (United States)); Cowan, J.H. Jr.; Houde, E.D.; Coutant, C.C. Oak Ridge National Lab., TN (United States). [1992]. 47p. Sponsored by Electric Power Research Inst., Palo Alto, CA (United States). DOE Contract AC05-84OR21400. From 16. annual larval fish conference; Kingston, RI (United States); 16-19 Jun 1992. Order Number DE93001365. Source: OSTI; NTIS; GPO Dep.

We demonstrate an individual-based approach to population modeling to evaluate environmental quality effects on early life stages of fishes. We believe that, regardless of the modeling approach, environmental quality effects ultimately must be evaluated at the population level. Determining population-level consequences of changes in environmental quality is critical because the population is the relevant endpoint of interest with respect to success of the species and its availability for harvest. It offers a common metric upon which to compare among different environmental factors, effects, and life stages.

4235 (DOE/ER/30196–2) **[Incorporation of an organic MAGIC (Model of Acidification of Groundwater in Catchments) and testing of the revised model using independent data sources]: Progress report, March 16, 1992–September 15, 1992.** Sullivan, T.J. E and S Environmental Chemistry, Inc., Corvallis, OR (United States). Sep 1992. 82p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER30196. Order Number DE93000543. Source: OSTI; NTIS; GPO Dep.

A project was initiated in March, 1992 to (1) incorporate a rigorous organic acid representation, based on empirical data and geochemical considerations, into the MAGIC model of acidification response, and (2) test the revised model using three sets of independent data. After six months of performance, the project is on schedule and the majority of the tasks outlined for Year 1 have been successfully completed. Major accomplishments to data include development of the organic acid modeling approach, using data from the Adirondack Lakes Survey Corporation (ALSC), and coupling the organic acid model with MAGIC for chemical hindcast comparisons. The incorporation of an organic acid representation into MAGIC can account for much of the discrepancy earlier observed between MAGIC hindcasts and paleolimnological reconstructions of preindustrial pH and alkalinity for 33 statistically-selected Adirondack lakes. Additional work is on-going for model calibration and testing with data from two whole-catchment artificial acidification projects. Results obtained thus far are being prepared as manuscripts for submission to the peer-reviewed scientific literature.

4236 (DOE/ER/61019–3) **Thermohaline circulations and global climate change: Annual progress report no. 3, January 15, 1992–December 14, 1992.** Hanson, H.P. Colorado Univ., Boulder, CO (United States). Cooperative Inst. for Research in

Environmental Sciences. [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER61019. Order Number DE93004601. Source: OSTI; NTIS; GPO Dep.

This report discusses research activities conducted during the period 15 January 1992–14 December 1992. Thermohaline Circulations and Global Climate Change is concerned with investigating the hypothesis that changes in surface thermal and hydrological forcing of the North Atlantic, changes that might be expected to accompany $C0_2$-induced global warming, could result in ocean-atmosphere interactions' exerting a positive feedback on the climate system. Because the North Atlantic is the source of much of the global ocean's reservoir of deep water, and because this deep water could sequester large amounts of anthropogenically produced $C0_2$, changes in the rate of deep-water production are important to future climates. Since deep-water Production is controlled, in part, by the annual cycle of the atmospheric forcing of the North Atlantic, and since this forcing depends strongly on both hydrological and thermal processes as well as the windstress, there is the potential for feedback between the relatively short-term response of the atmosphere to changing radiative forcing and the longer-term processes in the oceans. Work over the past 11 months has proceeded according to the continuation discussion of last January and several new results have arisen.

4237 (DOE/ID/13042–T4) **Supplemental investigations in support of environmental assessments by the Idaho INEL Oversight Program at the Idaho National Engineering Laboratory: Status report, June 30, 1992.** Idaho Dept. of Health and Welfare, Boise, ID (United States). 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC07-91ID13042. Order Number DE93003254. Source: OSTI; NTIS; INIS; GPO Dep.

This document reports on the status of supplemental investigations in support of environmental assessments by the Idaho INEL Oversight Program at the Idaho National Engineering Laboratory. Included is information on hydrology studies in wells open through large intervals, unsaturated zone contamination and transport processes, surface water-groundwater interactions, regional groundwater flow, and independent testing of air quality data.

4238 (DOE/PN/38014–T1) **1991 environmental monitoring report for the Naval Reactors Facility.** Westinghouse Electric Corp., Idaho Falls, ID (United States). [1991]. 43p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC11-89PN38014. (NRFRC-EC–1007). Order Number DE93000382. Source: OSTI; NTIS; INIS; GPO Dep.

The results of the radiological and non-radiological environmental monitoring programs for 1991 at the Naval Reactors Facility (NRF) are presented in this report. The results obtained from the environmental monitoring programs verify that releases to the environment from operations at NRF were within the guidelines established by state and federal regulations. Evaluation of the environmental data confirms that the operation of NRF continues to have no adverse effect on the quality of the environment or heath and safety of the general public. Furthermore, a conservative assessment of radiation exposure to the general public as a result of NRF operations demonstrated that the dose received by any member of the public was well below the most restrictive dose limits prescribed by the EnVironmental Protection Agency (EPA) and the Department of Energy (DOE).

4239 (ETDE-IT–92-85) **Gas exchange at air-sea interface: Technique for radon measurements in seawater.** Queirazza, G.; Roveri, M.; Delfanti, R.; Papucci, C. Ente Nazionale per l'Energia Elettrica, Milan (Italy). Centro Termica e Nucleare; ENEA, La Spezia (Italy). Centro Ricerche Energia Ambiente Santa Teresa. 1991. 13p. (CONF-9109443–1: International symposium on radionuclides in the study of marine processes (Radstomp 91), Norwich (United Kingdom), 9-14 Sep 1991). Order Number DE93729477. Source: OSTI; NTIS (US Sales Only); INIS.

The rate of exchange of various gas species, such as O_2, CO_2 etc. across the air-water interface can be evaluated from the ^{222}Rn vertical profiles in the water column. Radon profiles were measured in 4 stations in the NW Adriatic Sea, in September 1990, using solvent extraction and liquid scintillation counting techniques, directly on board the ship. The radiochemical procedure is described in detail. The lower limit of detection is approximately 0.4 mBq l^{-1}. The radon deficiency in the profiles gives estimates of the gas transfer rate across the air-sea interface ranging from 0.9 to 7.0 m d^{-1}. The suitability of the radon deficiency method in shallow water enclosed seas is briefly discussed.

4240 (ETDE-mf–93728811) **Toxicological assessment and screening method for groundwater contaminated by landfill leachates or other long-standing pollution.** WaBoLu-Hefte. Kaiser, U. Bundesgesundheitsamt, Berlin (Germany). Inst. fuer Wasser-, Boden- und Lufthygiene; Bundesministerium fuer Forschung und Technologie, Bonn (Germany). Jan 1992 72p. (In German). Contract BMFT 1440464-3. Order Number DE93728811. Source: OSTI; NTIS (US Sales Only).

This model was specifically developed for an assessment of the toxicological potential of possible oral exposures through drinking water taken from contaminated ground water. Special emphasis was placed on the problem of important information which may be lacking for individual toxicological fields. Any solutions suggested to-date to help this situation have fallen short. This new approach involves an assessment screening method which does not only cover the qualitative and quantitative aspects of the toxicity of a substance/compound, but also constitutes an attempt at making those substances comparable for a study even if they are differing in their data starting bases or if toxicological information is lacking in part. However, this standardized collection and assessment of groundwater contaminants from let-up industrial sites and landfills could not take the ecotoxicological potential into account. (orig.) With 15 figs.

4241 (ETDE-mf–93728815) **Treatment of effluent from dredged material disposal sites. Nitrification plant Francop. Final report.** Ergebnisse aus dem Baggergutuntersuchungsprogramm. Netzband, A. Freie und Hansestadt Hamburg (Germany). Strom- und Hafenbau; Umweltbundesamt, Berlin (Germany). Mar 1992 120p. (In German). Contract UBA 20 441-11/2. Order Number DE93728815. Source: OSTI; NTIS (US Sales Only).

Short Communication.

4242 (INIS-BR–2965) **Pre-concentration of Cr, Mn, Fe and Co of water sea and analysis by plasma emission spectroscopy - DCP.** Ferreira, E.M.M. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1985 98p. (In Portuguese). Order Number DE93607151. Source: OSTI; NTIS (US Sales Only); INIS.

Studies of separation and pre-concentration methods of chromium, manganese, iron and cobalt from seawater, that allow use control methods of ^{51}Cr, ^{54}Mn, $^{55,59}Fe$, $^{58,59}Co$ with a better sensibility and the determination of this elements by atomic absorption spectroscopy or plasma emission spectroscopy are described. This methods of seawater analysis will use near the region of Angra I reactor. (author).

4243 (INIS-BR–3015) **Estimative of alpha radiation dose due to natural concentration of Ra-226 in waters from Pocos de Caldas.** Sigaud, G.M. Pontificia Univ. Catolica do Rio de Janeiro, RJ (Brazil). Dept. de Fisica. 1979 150p. (In Portuguese). Order Number DE93607152. Source: OSTI; NTIS (US Sales Only); INIS.

A dosimetric model for calculating the annual dose equivalent for an individual and the annual collective dose equivalent from ^{226}Ra is developed. This model is applied to the measured concentrations of ^{226}Ra in waters of the hydro graphic basins of the Pocos de Caldas plateau, using the pathways of drinking water and ingestion of food grown in irrigated fields. A linear model for simulating potential ^{226}Ra contamination of the waters of the region is also applied, and the doses from these contaminations are estimated using the dosimetric model developed. (author).

4244 (INIS-BR–3039) **Hydrogeologic, hydrogeochemical and isotopic studies of mineral and thermal waters from Aguas de Lindoia and Lindoia, SP.** Yoshinaga, S. Sao Paulo Univ., SP (Brazil). Inst. de Geociencias. 1990 134p. (In Portuguese). Order Number DE93607149. Source: OSTI; NTIS (US Sales Only); INIS.

The underground circulation of the so-called mineral waters of Aguas de Lindoia and Lindoia is conditioned by fractures of Complex Amparo crystalline rocks. The geologic studies and its evolutionary history are so important for understanding the origin, circulation and mineralization of these explored waters. The chemical analysis of the waters both from springs and wells pointed to low mineralization with about 100 mg/l TDS. The bi carbonated calcic and calcic-magnesian content was interpreted as coming from alteration processes of silicate minerals. The isotopes $\delta^{18}O$ and $\delta^{2}H$ concentrations indicate the meteoric origin, different recharge zones and evaporation phenomena in the springs and wells waters on the study area. The Radon-222 radioactivity used to classification of mineral waters in this legislation is dubious because it is unstable (3,82 days) and may be dangerous to human. (author).

Studies were performed with the aim of establishing the kinetic parameters basic to the interactions of heavy metals with koalinite under river conditions with and without addition of nitrilotriacetic acid (NTA). For this purpose laboratory experiments were performed with copper and zink and a model concept allowing mathematical predictions on the time course of heavy metal remobilization in sediment material was developed. (orig.).

4247 (KFK–4976, pp. 27-36) **Species distribution models and complexing on natural organic macromolecules.** Falck, W.E. (British Geological Survey, Nottingham (United Kingdom). Fluid Processes Research Group). Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Entsorgungstechnik. Dec 1991. (In German). (CONF-9009516–: Workshop on geochemical modeling, Karlsruhe (Germany), 19-20 Sep 1990). In *Geochemical modeling. Proceedings.* 107p. Order Number DE93705610. Source: OSTI; NTIS (US Sales Only).

The necessity of taking the influence of organic macromolecules on the speciation of ions in natural waters into account is continually gaining significance. Simple models with discrete ligands are not able to adequately simulate the heterogenity of binding sites and the dependence of bond force on quantities such as ionic strength. Therefore a more realistic model has been incorporated into the speciation programme PHREEQE. This model principally still works with discrete ligands so as to remain compatible with the PHREEQE concept, yet it also takes the influnece of electrostatic interactions on bond force into account. Two alternative formulations are presented, allowing for a plane and a spherical conformation of the macromolecules. The model is tried on data from literature. (orig.).

4248 (KFK–4976, pp. 37-50) **A vector-computer-oriented method for a combined calculation of geochemical and mass transport processes in aquifers.** Vogt, M. (Lahmeyer International GmbH, Frankfurt am Main (Germany)). Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Entsorgungstechnik. Dec 1991. (In German). (CONF-9009516–: Workshop on geochemical modeling, Karlsruhe (Germany), 19-20 Sep 1990). In *Geochemical modeling. Proceedings.* 107p. Order Number DE93705610. Source: OSTI; NTIS (US Sales Only).

This paper presents a vectorcomputer-orientated multicomponent transport-reaction model. The features of the model are as follows: due to the optimization and vectorization of the computer code the model can be used even for large-scale simulations of coupled chemical and transport processes within a reasonable CPU-timescale. The model is very flexible in its ability to simulate any kind of chemical reaction. To demonstrate these features the model is applied to a case study of a two-dimensional transport process, combined with the interaction of cation exchange and calcite equilibrium mechanisms. (orig.).

4249 (KFK–4976, pp. 51-62) **Development of a simulation model for coupling microbial transformations and chemical equilibrium reactions.** Lensing, H.J. (Karlsruhe Univ. (Germany). Inst. fuer Hydromechanik); Herrling, B. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Entsorgungstechnik. Dec 1991. (In German). (CONF-9009516–: Workshop on geochemical modeling, Karlsruhe (Germany), 19-20 Sep 1990). In *Geochemical modeling. Proceedings.* 107p. Order Number DE93705610. Source: OSTI; NTIS (US Sales Only).

Under certain conditions the transformations effected by individual bacteria groups exert considerable influence on the chemical medium in the aquifer. Besides the enzyme kinetics, which can by approximation be determined with monod kinetics, the kinetics of the diffusive exchange between mobile interstitial water and the immobile biophase is decisive in simulating these changes. The two-zone approach permits a representation of the partly parallel reduction of the individual electron acceptors. The model also dispends with unprovable suppositions on the distribution of biomass on a microscopic scale. The macroscopic variable of bacteria concentration in the biofilm contains all the information on the distribution of biomass in the system and can under certain circumstances be measured in practice. The kinetics of the diffusion exchange between the phases in the system cannot be measured directly, but this problem is common to all models based on kinetics. (orig.).

4250 (KFK–4976, pp. 89-98) **How strong are the interactions of the main components on the calculated activity of the minor and trace components in natural waters? - A case study with Pitzer's model BrinEQ.** Kahlert, H. (Sediment-Petrographisches Inst., Goettingen (Germany)). Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Entsorgungstechnik. Dec 1991. (In German). (CONF-9009516–: Workshop on geochemical modeling, Karlsruhe (Germany), 19-20 Sep 1990). In *Geochemical modeling. Proceedings.* 107p. Order Number DE93705610. Source: OSTI; NTIS (US Sales Only).

The aim of this work is to present with the assistance of Pitzer's theory a semi-quantitative model permitting an estimation of the reactivity ('activity') of minor and trace components solely on the basis of the amount and type of their charge. A further intention is to demonstrate that the main components have a strong influence on the solution behaviour of the trace and minor components (matrix effects) whereas the trace elements cause no significant change in the activity of the main components of the solution. The results calculated for two 'typical' waters ('river, sea water test case') are presented as input parameters. They can be considered representative for natural conditions and are also accepted as an 'international standard' in literature. (orig.).

4251 (ORNL/M–2380) **Clinch River Environmental Restoration Program: Phase 1, Data listing.** Cook, R.B. Oak Ridge National Lab., TN (United States). 28 Sep 1992. 275p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93001401. Source: OSTI; NTIS; INIS; GPO Dep.

This report consists of tables and listings from the results of the Phase I data gathering activities of the Clinch River Environmental Restoration Program (CR-ERP). The table of contents outlines the presentation of the material and has been annotated to indicate the key fields used to order the printing of each data table. Definitions of selected column headings are provided. Sample collection information is shown first and then more specific information for each matrix type is presented. The analytical results have been reviewed

by independent validators and the qualifiers shown are the results of their efforts. No data that were rejected by the validation process are included in this listing. Only results of routine samples are listed; quality control sample results were excluded. All data, both detected and nondetected values, were used to calculated the summary table values. However, only Detected values are given on the analyte specific listings.

Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9209158–6: 10. symposium on turbulence and diffusion, Portland, OR (United States), 29 Sep - 2 oct 1992). Order Number DE93001517. Source: OSTI; NTIS; GPO Dep.

Mixing in the ocean surface layer is an important process in the transport of heat, momentum, and CO_2 into the deep ocean, For example, the flux of heat into the cold, upwelling water in equatorial regions provides one of the major heat sources driving the ocean circulation. Direct measurements of the ocean mixed layer have provided good estimates of the bulk layer properties. However, estimates of the small-scale effects of intenial waves and related turbulence have remained ambiguous because of the difficulty in observing these processes. Until more detailed measurements become available, numerical models can provide a convenient and cost-effective way to analyze the details of the surface mixed layer. Modeling the surface layer of the equatorial Pacific Ocean is challenging because of the strong vertical current shear and density stratification common to the region. The primary zonal current is the eastward flowing Equatorial Undercurrent (EUC) centered at roughly 120 m depth, with a speed of about 1.5 ms^{-1} as shown in Figure 1. The EUC is forced by a zonal pressure gradient resulting from the westward directed surface wind stress. Above the EUC, the wind stress directly forces thee South Equatorial Current (SEC), which flows westward with a speed of about 0.5 ms^{-1}. The shear zone generated by these currents is marginally stable and exhibits a diurnal cycle of turbulence dependent on convection forced by surface cooling. In addition, surface convection forces internal gravity waves, which can transport momentum away from the surface current to deeper waters. In this report, we discuss recent modeling results for the equatorial Pacific showing the generation of convection, turbulence, and internal waves.

4253 (VTT-SYMP–126, pp. 45-52) **Modelling of coupled transport of air, water and heat in unsaturated zone.** Niemi, A. (Technical Research Centre of Finland, Espoo (Finland). Road and Traffic Lab.); Jaakkola, T. Technical Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling.* 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

In the article modelling of coupled transport of air, water and heat in gas and liquid phases is discussed. The numerical algorithm TOUGH used for the modelling as well as the application of the model to two case studies are described. In the first application the advancement of gas injected into fractured, water saturated rock is modelled. The second application concerns the modelling of a field experiment where the unsaturated zone in an esker formation is used for storage of heat. In the method warm air is injected into the unsaturated zone and transport of heat takes place both by convection of the air and conduction.

Road and Traffic Lab.); Jaakkola, T.; Hassinen, P. Technical Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling.* 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

Hydrologists are increasingly focusing on environmental problems. As these are mostly related to the shallow parts of the subsoil, there is a growing need for cost-effective advanced imaging techniques to map subsurface electrical conductivity variations. In the paper, a geoelectrical workstation (a device and software) for imaging is presented. A microcomputer-controlled device for automatic array (any electrode configuration) scanning using multi-electrode cables and time monitor is linked directly to control software and inversion programs. The continuous vertical soundings are automatically inverted using equivalent- multilayer-distribution procedure in which the number of layers equals the number of digitized points on the sounding curve. Resulting 2D-image is used together with additional geoinformation as a starting model for an iterative least squares procedure with singular value decomposition. Images can be used to locate and map lateral and vertical porosity variations in soil and rock, identify subsurface fractures and permeable zones, detect and map subsurface resistivity contrasts which may reflect the distribution of contaminants in the unsaturated and saturated zones and time monitor conductive tracers.

4255 (VTT-SYMP–126, pp. 81-99) **Inverse fracture network modelling.** Korkealaakso, J. (Technical Research Centre of Finland, Espoo (Finland). Road and Traffic Lab.); Niemi, A. Technical Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling.* 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

The basic problem in analyzing flow and transport in fractured rock is that the flow may be largely governed by a poorly connected network of fractures. Flow in such a system cannot be modeled with traditional modelling techniques. Fracture network models also have a limitation, in that they are based on geological data on fracture geometry even though it is known that only a small portion of fractures observed is hydraulically active. This paper discusses a new technique developed for treating the problem as well as presents a modelling example carried out to apply it. The approach is developed in Lawrence Berkeley Laboratory and it treats the fracture zone as an 'equivalent discontinuum'. The discontinuous nature of the problem is represented through flow on a partially filled lattice. An equivalent discontinuum model is constructed by adding and removing conductive elements through a statistical inverse technique called 'simulated annealing'. The fracture network model is 'annealed' until the modified systems behaves like the observed. The further development of the approach continues at LBL and in a joint LBL/VTT collaboration project the possibilities to apply the technique in Finnish conditions are investigated.

4256 (VTT-SYMP–126, pp. 115-121) **THETA - A computer program for the simulation of coupled fluid, heat and solute transport in porous media.** Kangas, M. (Helsinki Univ. of Technology, Otaniemi (Finland). Dept. of Technical Physics); Lund, P. Technical Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling.* 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

In the study, a 3-dimensional microcomputer model for the simulation of coupled water, heat and solute transport in porous media has been developed. Typical run times on a 80486/33MHz microcomputer with 5000-7000 point grid range from 10 minutes to few hours. As to user interface, a menu-type input data file definition as well as on-line graphics are provided. A full menu based input data generation is also being developed.

4257 (VTT-SYMP–126, pp. 128-134) **Ground water modelling in artificial recharge projects.** Laukkanen, R. (Soil and Water Ltd, Helsinki (Finland)); Saijonmaa, L. Technical Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling.* 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

Decision-making is strongly based on modelling in two of our water supply projects concerning artificial ground water. The model used is a 2-dimensional flow and transport model using the element method. Due to sharp variations in Finnish soils, the modelling process is based on careful and detailed evaluation of basic hydrogeological data before and during model calibration.

4258 (VTT-SYMP–126, pp. 135-140) **Application of the MOC-model to a contaminated groundwater area in Kaerkoelae.** Forsius, J. (Imatran Voima Oy, Helsinki (Finland)). Technical

Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling*. 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

The two-dimensional groundwater model MOC, developed by U.S. Geological Survey was applied to the polluted groundwater area of Kaerkoelae. Since enough field data did not exist for calibration of the model, only the influence of different pumping rates and boundary conditions were investigated. It was found that the model was quite sensitive to the applied boundary conditions.

4259 (VTT-SYMP–126, pp. 141-154) **Groundwater model views vs. experience in surface waters.** Virtanen, M. (Suomen Ympaeristoevaikutusten Arviointikeskus Oy, Helsinki (Finland)). Technical Research Centre of Finland, Espoo (Finland). 1991. (In Finnish). (CONF-9105387–: Seminar on ground water modelling, Espoo (Finland), 9 May 1991). In *Ground water modelling*. 156p. Order Number DE93607107. Source: OSTI; NTIS; INIS.

The future use of the ground water models is viewed in the light of the highly successful surface water experiences. The key factors for progress in ground water applications are expected to include: Truly interactive coupling between the measurements and models. Simple but intelligent analysis of the field results aiming at understanding of their further meaning and of the real reasons for possible differences between the models and the measurements. Start from small-scale applications for real verification of the model validity and for proper directing of the model development to the most essential questions of the nature. Base of the models on the real decrees of nature, on universally valid elementary relations and on thinking of the causal dynamics as far as anything is known about them, Continuous further development of the models along with the applications - resulting usually quite soon in writing own model codes instead of fruitless fighting with the emerging mysteries, stiffness and limitations of the commercial computer programs. Close co-operation between people with different emphases, backgrounds and responsibilities including persons mainly interested in measurements, their interpretation, model development, decision making and in planning. Practical problems to be solved from the very beginning of the model work in order to force the results to be completed in time and to get the models involved in the most acute needs of planning and decision making at an early stage of their development.

4260 (WSRC-TR–92-179) **Ichthyoplankton entrainment study at the SRS Savannah River water intakes for Westinghouse Savannah River Company: Final report.** Paller, M. (Westinghouse Savannah River Co., Aiken, SC (United States)). Westinghouse Savannah River Co., Aiken, SC (United States); Dames and Moore, Atlanta, GA (United States). 26 Mar 1992. 405p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93001346. Source: OSTI; NTIS; INIS; GPO Dep.

Cooling water for L and K Reactors and makeup water for Par Pond is pumped from the Savannah River at the 1G, 3G, and 5G pump houses. Ichthyoplankton (drifting fish larvae and eggs) from the river are entrained into the reactor cooling systems with the river water and passed through the reactor's heat exchangers where temperatures may reach 70°C during full power operation. Ichthyoplankton mortality under such conditions is assumed to be 100 percent. The number of ichthyoplankton entrained into the cooling system depends on a variety of variables, including time of year, density and distribution of ichthyoplankton in the river, discharge levels in the river, and the volume of water withdrawn by the pumps. Entrainment at the 1 G pump house, which is immediately downstream from the confluence of Upper Three Runs Creek and the Savannah River, is also influenced by discharge rates and ichthyoplankton densities in Upper Three Runs Creek. Because of the anticipated restart of several SRS reactors and the growing concern surrounding striped bass and American shad stocks in the Savannah River, the Department of Energy requested that the Environmental Sciences Section (ESS) of the Savannah River Laboratory sample ichthyoplankton at the SRS Savannah River intakes. Dams & Moore, Inc., under a contract with Westinghouse Savannah River Company performed the sampling and data analysis for the ESS.

4261 (WSRC-TR–92-193-Rev.1) **Tritium uptake by fish in a small stream: Revision 1.** Eaton, D.; Murphy, C.E. Jr. Westinghouse Savannah River Co., Aiken, SC (United States). 17 Sep 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93001899. Source: OSTI; NTIS; INIS; GPO Dep.

The tritium concentration in the water from freeze drying and the water from combustion of the dry tissue was measured in fish (largemouth bass), stream macrophytes, and streamside vegetation at five sampling locations in Four Mile Branch on the Savannah River Site (SRS). Four Mile Branch has elevated tritium concentration, largely from migration of water through the soil from adjacent seepage basins that received industrial wastewater containing tritium. The stream water and the vegetation, through the food chain, are thought to be the two sources of tritium reaching the fish. Comparision of the tritium activity of the freeze-dried water from fish flesh and of the sources of tritium, indicates that the fish flesh approaches a steady-state concentration with the stream water. The freeze-dry water from the vegetation is also at a lower specific activity than the stream water. The water of combustion from the vegetation is also at a lower specific activity than stream water. The water of combustion from the fish flesh is somewhat higher in specific activity than the stream water or the water in the fish. The distribution of tritium among the components of this system can be explain in terms of the turnover of water and organic hydrogen in the components.

4262 (ANL/CP–76567) **Primary charge separation in isolated photosystem II reaction centers.** Seibert, M. (National Renewable Energy Lab., Golden, CO (United States)); Toon, S.; Govindjee; O'Neil, M.P.; Wasielewski, M.R. Argonne National Lab., IL (United States). 24 Aug 1992. 5p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract W-31109-ENG-38 ;AC02-83CH10093. (CONF-9208155–2: 9. international congress on photosynthesis, Nagoya (Japan), 30 Aug - 5 sep 1992). Order Number DE92041128. Source: OSTI; NTIS; GPO Dep.

Primary charge-separation in isolated bacterial reaction center (RC) complex occurs in 2.8 ps at room temperature and 0.7–1.2 ps at 10 K. Because of similarities between the bacterial and photosystem II (PSII) RCs, it has been of considerable interest to obtain analogous charge-separation rates in the higher plant system. Our previous femtosecond transient absorption studies used PSII RC material stabilized with PEG or by exchanging dodecyl maltoside (DM) for Triton in the isolation procedure. These materials gave charge-separation 1/e times of 3.0 $\pm$ 0.6 ps at 4°C and 1.4$\pm$ 0.2 ps at 15 K based on the risetime of transient absorption kinetics at 820 nm. These values were thought to represent the time required for formation of the $P680^+$-$Pheo^-$ state. Recent results of Hastings et al. obtained at high data acquisition rates and low flash intensities, suggest that the $Pheo^-$ state may form more slowly. In light of this work, we have carried out additional time domain studies of both electron transport and energy transfer phenomena in stabilized DM PSII RCs at room temperature. We used a 1-kHz repetition rate femtosecond transient absorption spectrometer with a 200 fs instrumental time resolution and compared the results with those obtained by others using frequency domain hole-burning techniques.

4263 (BNL–47954) **Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue**

technique. Schoenborn, B.P. Brookhaven National Lab., Upton, NY (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920792–38: Society of Photo-Optical Instrumentation Engineers (SPIE) international symposium on optical applied science and engineering, San Diego, CA (United States), 19-24 Jul 1992). Order Number DE93001654. Source: OSTI; NTIS; GPO Dep.

The major problem in neutron protein crystallography is the low flux of present neutron sources. The collection of a data set using a conventional rotation technique and a 2D detector takes many weeks. One way to increase the flux at the sample is to increase the wavelength bandwidth. The conventional technique using a standard monochromator like Cu or Be has a typical bandwidth of 1%. A multilayer monochromator can however be tailored to give bandwidth up to 25% or even larger and have an angular acceptance angle of~ 3%. This can be achieved by a multiple spacing multilayer. In this case the diffraction geometry is such that the reflection in diffraction condition is "scanned" by the $\Delta\lambda$ and not by rotating the reciprocal lattice point through the Ewald sphere. Wavelength bandwidth of 10% satisfy this condition. It is important to tailor the bandwidth to the size needed by the extend of the reciprocal lattice "point" to minimize background. The intensity of the reflection is proportional to the $\Delta\lambda r$ that just covers the width of the reciprocal "point" while the background is proportional to the full wavelength spread $\Delta\lambda$ that hits the crystal. The conventional Laue technique is not suitable since it increases the background by the ratio of $\Delta\lambda\Delta\lambda r$, a ratio that can easily reach multiples of 10.

4264 (CONF-910550–, pp. 49-59) **Optimization of large-scale chromatography for biotechnological applications.** Peskin, A.P. (National Inst. of Standards and Technology, Boulder, CO (United States)); Rudge, S.R. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

An economic evaluation of a chromatographic separation is discussed. The effects of particle size, cycle time, solvent, and column costs are analyzed. With small particles (< 20 μm), the cost of the packing can be as much as 99% of the total cost of the process, whereas with large particles (> 60 μm), resin costs are less than half of the total. A strong optimum is found between 20-40 μm for maximum productivity, using both Gaussian models and the mass transfer model of Lapidus and Amundson to generate peaks. A new compilation of resin costs, column costs, and pump costs is given.

4265 (CONF-910550–, pp. 161-173) **Optimal nutrient feed policies for heterologous protein production.** Harcum, S.W. (Univ. of Maryland, College Park (United States)); Ramirez, D.M.; Bentley, W.E. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Recombinant Escherichia coli, which overproduce heterologous protein, redirect endogenous metabolic activity to that mediated by the recombinant expression vector. Consequently, cells may experience perturbations in the biosynthetic reaction network, including the amino acid biosynthesis pathways. These cells are characterized by decreased growth rate, decreased cell mass yield, and increased heterologous protein degradation. This study investigates the dynamics of chloramphenicol-acetyl-transferase (CAT) synthesis and degradation in E. coli JM105 grown on minimal media, and correlates the observed phenomena with induction strength. Coordinated amino acid feeding was shown to increase the heterologous protein yield. Rational design of nutrient feeding possibilities is explored.

4266 (CONF-910550–, pp. 217-231) **Thermal denaturation of Trichoderma reesei cellulases studied by differential scanning calorimetry and tryptophan fluorescence.** Baker, J.O. (Solar Energy Research Inst., Golden, CO (United States)); Tatsumoto, K.; Grohmann, K.; Himmel, M.E.; Woodward, J.; Wichert, J.M.; Shoemaker, S.P. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

The thermal denaturation of four purified Trichoderma reesei cellulase components, cellobiohydrolase (CBH) I, CBH II, endoglucanase (EG) I, and EG II, has been monitored using a combination of classical temperature/activity profiles, differential scanning calorimetry (DSC), and thermal scanning fluorescence emission spectrometry. Significant correlations were found between the results of enzyme activity studies and the results obtained through the more direct physical approaches, in that both DSC and the activity studies showed EG II (T_m=75C) to be much more thermostable (by 10-11C) than the other three enzymes, all three of which were shown by both activity profiles and DSC to be very similar in thermal stability. The temperature dependence of the wavelength of maximum tryptophan emission showed a parallel result, with the three enzymes exhibiting less thermostable activity being grouped together in this regard, and EG II differing from the other three in maintaining a less-exposed tryptophan microenvironment at temperatures as high as 73C. The DSC results suggested that at least two transitions are involved in the unfolding of each of the cellulase components, the first (lower-temperature) of which may be the one correlated with activity loss.

4267 (CONF-910550–, pp. 247-259) **Purification and characterization of a xylanase from the thermophilic ascomycete Thielavia terrestris 255B.** Gilbert, M. (Univ. of Ottawa, ON (Canada)); Breuil, C.; Saddler, J.N.; Yaguchi, M. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Thielavia terrestris 255B, a thermophilic ascomycete, produced two major forms of xylanase with pIs of 4.6 (xylanase I) and 6.1 (xylanase II). The latter enzyme could be purified to > 99% homogeneity using anion-exchange chromatography and gel filtration. Xylanase II had a mol wt of 25.7 kDa (SDS-PAGE) and a pH and a temperature optimum of 3.6-4.0 and 60-65C, respectively. The ratio of the enzyme's activity against xylan and carboxymethylcellulose was 500-1000 to 1, indicating a possible application of this enzyme in biobleaching processes. The amino acid sequence of this protein is being determined, and initial data suggest that the enzyme belongs to a group of low-mol wt xylanases that have been isolated from both bacteria and fungi.

4268 (CONF-910550–, pp. 261-272) **Mycelia-associated β-xylosidase in pellets of Aspergillus sps.** Stalbrand, H. (Univ. of Lund (Sweden)); Hahn-Hagerdal, B.; Tjerneld, F.; Reczey, K. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

A screening of 10 strains of Aspergillus for pellet formation and mycelia-associated β-xylosidase activity was performed in media containing glucose and glucose supplemented with methyl β-D-Xylopyranoside. The aim was to produce an immobilized enzyme preparation. Three strains with high mycelia-associated β-xylosidase activity were investigated for enzyme leakage and enzyme stability: A. terreus QM 1991, A. phoenicis ATCC 13157, and A. phoenicis QM 329. The pellets of A. phoenicis QM 329 had the highest β-xylosidase activity (280 IU/g dry wt mycelia) after 333 h of incubation. From measurements of both cell-bound enzyme activity and the activity in solution, it could be concluded that for Aspergillus phoenicis QM 329 and ATCC 13157 the decrease in β-xylosidase activity bound to the pellets was owing to enzyme

leakage. For Aspergillus terreus QM 1991, the decrease of pellet-bound β-xylosidase activity was the result of both leakage and enzyme deactivation at 50C. β-Xylosidase in pellets of A. phoenicis QM329 hydrolyzes xylobiose and p-nitrophenyl β-D-xylopyranoside with the same rate of conversion.

4269 (CONF-910550–, pp. 283-295) **The anionic glycan from the cactus Cereus peruvianus.** Alvarez, M. (Natural Products Lab., Maringa (Brazil)); Costa, S.C.; Utumi, H.; Huber, A.; Beck, R.; Fontana, J.D. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

The columnar cactus Cereus peruvianus provides various compounds of interest that account for most of its 10% dry wt content. Included are acidic gum and cellulose as the highly polymerized carbohydrate components, and a complex waxy lipid fraction. The major gum fraction (1.5 g% of the fresh phytobiomass on single aqueous extraction) is an uronylated rhamnoarabinogalactan whose intrinsic viscosity may exceed 1000 mL/g. Its rheological behavior is, in part, influenced by the native o-acetyl and cation components, mainly Ca^{2+}. A pigment-freepcwdered gum was obtained by precipitating and washing the fresh mucilage with 2-3 vol of ethanol. The almost protein-free polysaccharide forms viscous solution upon redissolution. The possible uses to be investigated for the pretreated cactus gum will be as an adjuvant in the flocculation of water impurities and in formulation of cosmetics.

4270 (CONF-910550–, pp. 297-308) **Fructose and fructose-anhydrides from Dahlia inulin.** Hauly, M. (Dept. Chemistry, Londrina (Brazil)); Bracht, A.; Beck, R.; Fontana, J.D. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Inulin from Dahlia spp. tubers (50 g% yield, dry basis; 12.5 g% yield, wet basis) competes with Jerusalem artichoke and chicory as a source of fructose. Mild acid hydrolysis under pH control instead of nominal acid concentration of aqueous orthophosphoric acid resulted in almost quantitative monomerization of the labile fructan backbone. Byproducts hydroxymethylfurfural (HMF), (di)fructose anhydrides (DFA), and oligosaccharides were minimized. Microflora were collected from rotting Dahlia, and an inuloytic mold, able to metabolize HMF, as well as bacteria-producing DFA III were recovered. Microbiologically synthesized DFA was tested for biological activity using isolated rat liver perfusion.

4271 (CONF-910550–, pp. 317-329) **Use of chemostat for enhanced production of β-glucosidase by newly isolated anaerobic cellulolytic Clostridium strain RT9.** Tabassum, R. (Nuclear Inst. for Agriculture and Biology, Faisalabad (Pakistan)); Rajoka, M.I.; Malik, K.A. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

A new anaerobic, mesophilic, spore-forming, cellulolytic Clostridium strain, RT9, was isolated from bovine rumen fluid. This strain has the ability to hydrolyze cellulose (Sigma cell-100), carboxymethyl-cellulose (CMC), and cellobiose into ethanol, acetate, butyrate, lactate, acetone, H_2, and CO_2 as the major fermentation products. The bacterium also exhibited endoglucanase, exoglucanase, and β-glucosidase activities in batch culture during growth on chemically defined medium with cellulose as the sole carbon source. Chemostat experiments were conducted under pH, dilution rate, and carbohydrate limitations to study the effect of various parameters on enzymes and product formation. In chemostat with 0.5% cellobiose as the limiting product formation. β-glucosidase activity and ethanol production nutrient, maximum occurred at pH values of 5.5 and 6.5, respectively. At low accumulation was higher. β-glucosidase production increased up to 17-fold at a low dilution rate, and ethanol raised twofold. Relative activity of β-glucosidase on a percent basis was maximum at pH 45C. In a carbon-limited, continuous-culture experiment, when CMC was used as an inducer in cellobiose-growing culture, β-glucosidase activity was higher than the cellobiose-limited chemostat. On the other hand, enzyme declined twofold, and ethanol production increased in glucose limitation.

4272 (CONF-910550–, pp. 477-486) **A two-phase method to produce gel beads: Application in the design of a whole cell β-galactosidase catalyst.** Castillo, E. (Centro de Investigacion sobre Ingenieria Genetica y biotecnologia, Cuernavaca (Mexico)); Casas, L.; Munguia-Lopez, A.; Ramirez, D. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

A method for producing entrapped whole cell biocatalyst is described. The procedure consists of the direct mixing of a gel suspension with an oily phase. Three biopolymers are used: gelatin, agar, and carrageenan using K. fragilis cells containing β-galactosidase activity as a design model. For a given gel type and concentration, the bead's particle size is a direct function of the agitation rate and the type of impeller, as well as the geometry of the system. Therefore, the particle size distribution is obtained as a function of the impeller's Reynolds number in order to define a scale-up criteria. The β-galactosidase biocatalyst is characterized considering the effect of particle size and substrate concentration on the effectiveness factor. This method does not require the usual extrusion equipment and, as shown here, is adequate for scaling up.

4273 (CONF-910550–, pp. 487-498) **The one-dimensional biocatalyst: A research tool for in situ analysis of immobilized-cell biocatalysts.** Worden, R.M. A new method to culture and analyze cells entrapped in porous gels has been developed that enables the properties of living, immobilized cells to be measured in situ as a function of depth within the gel. The method employs scanning fluorescence microscopy, which can provide rapid, sensitive, noninvasive measurements with a resolution of < 1 mn. Any chemical species or cellular component that can be fluorescently marked can, in principle, be studied using this technique. Two applications of the approach are illustrated: measurement of transient diffusion rates within calcium alginate gel and monitoring growth of immobilized Escherichia coli cells.

4274 (DOE/ER/14005–T2) **[Molecular, genetic and physiological analysis of photoinhibition and photosynthetic]: Progress report, June 1991–November 1992.** Duke Univ., Durham, NC (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-89ER14005. Order Number DE93004365. Source: OSTI; NTIS; GPO Dep.

A major goal of this project is to use a combined molecular genetic, biochemical and physiological approach to understand the relationship between photosynthetic performance and the structure of the multifunctional D1 reaction center protein of Photosystem II encoded by the chloroplast psbA gene. Relative to other chloroplast proteins, turover of D1 is rapid and highly light dependent and de novo synthesis of D1 is required for a plant's recovery from short term exposure to irradiances which induce photoinhibitory damage. These observations have led to models for a damage/repair cycle of PSII involving the targeted degradation and replacement of photodamaged D1. To investigate the effects of perturbing the D1 cycle on photosynthesis and autotrophic growth under high

and low irradiance, we have examined the consequences of site-specific mutations of the psbA and 16S rRNA genes affecting synthesis, maturation and function/stability of the D1 protein introduced into the chloroplast genome of wildtype strain of the green alga Chlamydomonas reinhardtii using biolistic transformation.

4275 (DOE/ER/61125–2) **Ultrasensitive fluorescence detection of DNA: Progress report, February 1, 1991–January 31, 1992.** Mathies, R.A.; Glazer, A.N. California Univ., Berkeley, CA (United States). Dept. of Chemistry. [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-91ER61125. Order Number DE93004145. Source: OSTI; NTIS; GPO Dep.

We have shown that a number of polycationic highly fluorescent dyes form complexes with double-stranded DNA (ds-DNA) which are stable to electrophoresis and have characterized in detail such dsDNA complexes with TOTO (1,1′-(4,4,7,7-tetramethyl-4,7-diazaundecamethylene)-bis-4-[3-methyl-2,3-dihydro-(ben tetraiodide) and oxazole yellow dimer (YOYO; an analogue of TOTO with a benzo-1,3-oxazole in place of the benzo-1,3-thiazole). TOTO and YOYO are virtually non-fluorescent in solution, but form highly fluorescent complexes with dsDNA, up to a maximum dye to DNA bp ratio of 1:4, with >1000-fold fluorescence enhancement. We have developed an assay using YOYO for the quantitation of single-stranded and dsDNA in solution applicable over a range of DNA concentrations from 0.5 to 100 ng per ml. The fluorescent dsDNA-dye complexes allow detection of dsDNA on agarose and acrylamide gels with picogram sensitivity. We have applied these complexes in multiplex mapping experiments for accurate sizing and quantitation of restriction fragments. We have shown that in gel shift experiments the stable dsDNA-dye complexes can be used to detect heteroduplex-Muts complexes with a sensitivity comparable to radioisotopic detection.

4276 (LA-UR–92-1909) **An efficient bit string implementation of a database cross-field association system (with an application to protein sequence patterns).** Guigo, R. (Los Alamos National Lab., NM (United States)); Vazquez, I.; Smith, T.F. Los Alamos National Lab., NM (United States). [1992]. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-930117–1: 26. Hawaiian international conference on system science: biotechnology computing track, Kauai, HI (United States), 5-8 Jan 1993). Order Number DE92017525. Source: OSTI; NTIS; GPO Dep.

We present a fast implementation of an algorithm to infer correlation between database queries. The implementation has been primarily designed to automatically obtain the best description for the function of a given protein sequence pattern. We assume that such a description is the query on the functional annotation of a protein sequence database having the closet extension in the database to the extension of the pattern. The functional annotation of a protein sequence database can be described as a set-valued attribute whose domain is a set of one-place predicates with biological meaning. The query language is then a first order language and the query space can be mapped into a set algebra in which a measure of set similarity is introduced. We have previously developed an algorithm to search such an algebra when negation is not considered. Here, we present an efficient implementation of such and algorithm and we develop a method to search exhaustively a protein sequence database for biologically relevant protein sequence patterns, incorporating such an implementation. The method relies on the initial generation of an extensive collection of amino acid sequence motifs that correspond to high information dense regions in long consensus patterns derived from homologous protein families -and their automatic evaluation using above implementation. We have used this method to automatically search the SWISSPROT protein sequence database. The results obtained show that potentially meaningful amino acid sequence patterns may have been discovered.

4277 (LA-UR–92-3445) **Human retroviruses and aids, 1992: A compilation and analysis of nucleic acid and amino acid sequences.** Myers, G. (Los Alamos National Lab., NM (United States)); Korber, B. (eds.); Berzofsky, J.A.; Pavlakis, G.N. (eds.); Smith, R.F. (ed.). Los Alamos National Lab., NM (United States). Oct 1992. 684p. Includes 5 1/4" diskettes (2) designed to run on IBM PC-compatible and Macintosh computers.

This compendium and the accompanying floppy diskettes are the result of an effort to compile and rapidly publish all relevant molecular data concerning the human immunodeficiency viruses (HIV) and related retroviruses. The scope of the compendium and database is best summarized by the five parts that it comprises: (1) HIV and SIV Nucleotide Sequences; (H) Amino Acid Sequences; (III) Analyses; (IV) Related Sequences; and (V) Database Communications. information within all the parts is updated at least twice in each year, which accounts for the modes of binding and pagination in the compendium. While this publication could take the form of a review or sequence monograph, it is not so conceived. Instead, the literature from which the database is derived has simply been summarized and some elementary computational analyses have been performed upon the data. Interpretation and commentary have been avoided insofar as possible so that the reader can form his or her own judgments concerning the complex information. In addition to the general descriptions below of the parts of the compendium, the user should read the individual introductions for each part.

4278 (LA-UR–92-1850) **Calculating shared fragments for the single digest problem.** Soderlund, C. (Los Alamos National Lab., NM (United States)); Torney, D.; Burks, C. Los Alamos National Lab., NM (United States). [1992]. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-930117–2: 26. Hawaiian international conference on system science: biotechnology computing track, Kauai, HI (United States), 5-8 Jan 1993). Order Number DE92017501. Source: OSTI; NTIS; GPO Dep.

A partial restriction map can be computed by using single digest fragments from a set of clones that are known to be in a contig. If there is no error or uncertainty in the data so that the set of unique restriction fragments can be calculated exactly, then the restriction map can be assembled using a polynomial-time algorithm based on the consecutive 1's property. However, there is typically both error and uncertainty in the data, which we WW describe in this paper. The data we are using is from the chromosome 16 mapping project at Los Alamos National Laboratory. We have developed an algorithm that consists of two steps: (1) calculate the set of unique restriction fragments and (2) assemble the fragments so that the set of fragments for each clone is contiguous. We present our algorithm for calculating the most probable set of unique fragments.

4279 (DOE/ER/60400–6) **[Bifunctional chelates of Rh-105, Au-199, and other metallic radionuclides as potential radiotherapeutic agents].** Missouri Univ., Columbia, MO (United States). Dept. of Chemistry. [1991]. 55p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER60400. Order Number DE93003146. Source: OSTI; NTIS; INIS; GPO Dep.

Progress during this period is reported under the following headings: Diethylenetriamine based and related bifunctional chelating agents and their complexation with Rh-105, Au-198, Pd-109, cu-67, In-111, and Co-57; studies of Pd-109, Rh-105 and Tc-99m with bifunctional chelates based on phenylenediamine; establishment of

an appropriate protein assay method for conjugated proteins; studies of new bifunctional Bi, Tri and tetradentate amine oxime ligands with Rh-105; IgG and antibody B72.3 conjugation studies by HPLC Techniques with bifunctional metal chelates; and progress on ligand systems for Au(III).

4280 (DOE/ER/60639–5) **Radiopharmaceuticals for diagnosis and treatment: Progress report.** Kuhl, D.E. Michigan Univ., Ann Arbor, MI (United States). Div. of Nuclear Medicine. 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER60639. Order Number DE93004637. Source: OSTI; NTIS; INIS; GPO Dep.

We report on our efforts in PET basic radiochemistry, radiopharmaceutical synthesis, and preclinical radiopharmaceutical evaluation. These efforts are focused on three fronts. First predictive abilities in nucleophilic aromatic substitution with [^{18}F]fluorination of substituted aromatic rings. Although radiochemical yields can be predicted within a very similar group of compounds with similar leaving groups and substituent patterns, generalization to all nucleophilic substitutions with [^{18}F] fluoride is not warranted. Kinetic studies indicate significantly different rates of reactions, depending on ring substituents. Second, preclinical evaluation of new radiopharmaceuticals. We have synthesized and begun the preclinical evaluation of [^{11}C]tetrabenazine, a new radioligand based on the vesicular monoamine transport system. Third, our work, on [^{18}F]fluorination/decarbonylation reactions, structure-activity relationships in dopamine uptake inhibitors and effects of chronic drugs on radioligand binding is described.

4281 (DOE/ER/61091–T1) **[Non-invasive evaluation of the cardiac autonomic nervous system by PET]: Progress report.** Michigan Univ., Ann Arbor, MI (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER61091. Order Number DE93004636. Source: OSTI; NTIS; INIS; GPO Dep.

C-11 hydroxy ephedrine, introduced as the first clinically usable norepinephrine analogue, studies employing normal volunteers and patients with various cardiac disorders was found to valuable as a nonadreneric tracer. Simultaneously, animal studies been used to assess its use following ischemic injury in order to define neuronal damage. Current research focuses on the comparison of C-11 hydroxyephedrine with other neurotransmitters such as C-11 epinephrine and C-11 threohydroxyephedrine. Epinephrine is primarily stored in vesicles of the nerve terminal, while threohydroxyephedrine is only substrate to uptake I mechanism. Such a combination of radiotracers may allow the dissection of uptake I mechanism as well as vesicular storage. In parallel to the refinement of presynaptic tracers for the sympathetic nervous system, we are developing radiopharmaceuticals to delineate the adrenergic receptors in the heart. The combined evaluation of pre- and postsynaptic nerve function will improve our ability to identify abnormalides. We are currently developing a new radiosynthesis of the hydrophilic adrenergic receptor antagonist C-11 CGP-12177 which has been used by others for the visualization of adrenergic receptors in the heart. We are developing radiopharmaceuticals, for the delineation of presynaptic cholinergic nerve terminals. Derivatives of benzovesamicol have been labeled in our institution and are currently under investigation. The most promising agent is F-18 benzovesamicol (FEBOBV) which allows the visualization of parasympathetic nerve terminals in the canine heart as demonstrated by, preliminary PET data.

4282 (EGG-BNCT–10016-03/04) **INEL BNCT Research Program, March/April 1992.** Venhuizen, J.R. EG and G Idaho, Inc., Idaho Falls, ID (United States). Sep 1992. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE93001931. Source: OSTI; NTIS; GPO Dep.

This report presents summaries for two months of current research for the Idaho National Engineering Laboratory (INEL) Boron Neutron Capture Therapy (BNCT) Program. Information is presented on development and murino screening experiments of low-density lipoprotein, carboranyl alanine, and liposome boron containing compounds. Pituitary tumor call culture studies are described. Drug stability, pharmacology and toxicity evaluation of borocaptate sodium (BSH) and boronopheoylalanine (BPA) are described. Treatment protocol development via the large animal (canine) model studies and physiological response evaluation in rats are discussed. Supporting technology development and technical support activities for boron drug biochemistry and purity, analytical and measurement dosimetry, and noninvasive boron quantification activities are included for the current time period. Current publications for the two months are listed.

4283 (INIS-BR–3003) **The hyperfractionation in the oropharynx carcinomas treatment: stages III and IV.** Pinto, L.H.J. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Inst. de Biologia. 1990 84p. (In Portuguese). Order Number DE93607533. Source: OSTI; NTIS (US Sales Only); INIS.

From April 1986 until May 1989. 112 patients with stages III and IV oropharynx carcinomas were included in a protocol comparing the use of Hyperfractionation and Conventional Fractionation. The doses were 6600 rad in 33 fractions of 200 rad for the conventional fractionation and 7040 rad in 64 fractions, two fractions of 110 rad per day for the hyperfractionation. As of January 1990 an analysis was performed in 98 patients, with a median follow-up of 14 months. The probability of complete responses in the oropharynx was 74%, with 84% for the hyperfractionation and 64% for the conventional fractionation ($p < 0,05$). Survival was improved in 42 months for those patients treated with hyperfractionation: 27% versus 8% ($p < 0,05$). In patients with lesions out of the base of the tongue and in those with Karnofsky performance status of 50%, 60% and 70%, survival was improved with the use of hyperfractionation $p = 0,02$ and p 0,006 respectively. The study demonstrates the superiority of hyperfractionation over the classical fractionation in the treatment of patients with carcinoma of the oropharynx. (author).

4284 (INIS-BR–3024) **Monte Carlo calculations for doses in organs and tissues to oral radiography.** Sampaio, E.V.M. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1985 123p. (In Portuguese). Order Number DE93607540. Source: OSTI; NTIS (US Sales Only); INIS.

Using the MIRD 5 phantom and Monte Carlo technique, organ doses in patients undergoing external dental examination were calculated taking into account the different x-ray beam geometries and the various possible positions of x-ray source with regard to the head of the patient. It was necessary to introduce in the original computer program a new source description specific for dental examinations. To have a realistic evaluation of organ doses during dental examination it was necessary to introduce a new region in the phantom heat which characterizes the teeth and salivary glands. The attenuation of the x-ray beam by the lead shield of the radiographic film was also introduced in the calculation. (author).

4285 (INIS-BR–3034) **Mandible osteoradionecrosis. Incidence and clinical evaluation of its therapy.** Biazolla, E.R. UNESP, Aracatuba, SP (Brazil). Faculdade de Odontologia. 1989 56p. (In Portuguese). Order Number DE93607534. Source: OSTI; NTIS (US Sales Only); INIS.

The incidence and the efficiency of mandible osteoradionecrosis in patients with oral neoplasms and submitted to radiotherapy were studied. The osteoradionecrosis incidence in mandible was 6,67%. The treatment with sodium iodide 2% and hydrogen peroxide 10 v was the best treatment for mandible osteoradionecrosis. (L.M.J.).

4286 (LBL–32488) **The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report.** Lacer, J. (Lawrence Berkeley Lab., CA (United States)); ter Haar Romeny, B.M.; Viergever, M.A. Lawrence Berkeley Lab., CA (United States). Jun 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9207152–1: Society of Photo-Optical Instrumentation Engineers (SPIE) mathematical methods in medical imaging, San Diego, CA (United States), 22-23 Jul 1992). Order Number DE92041215. Source: OSTI; NTIS; GPO Dep.

In this paper we examine the possibility of using pure geometrical information from a prior image to assist in the reconstruction of tomographic data sets with lower number of counts. The situation can arise in dynamic studies, for example, in which the sum image from a number of time frames is available, defining desired

regions-of-interest (ROI's) with good accuracy, and the time evolution of uptake in those ROI's needs to be obtained from the low count individual data sets. 'the prior information must be purely geometrical in such a case, so that the activity in the ROI's of the prior does not influence the estimated uptake from the individual time frames. It is also desired that the prior does not impose any other conditions on the reconstructions, i.e., no smoothness or deviation from a known set of values is desired. We attack this problem in the framework of Vision Response Functions (VRFs), based on the work done by J.J. Koenderink in Utrecht. We show that there are assemblies of VRF's that can be presented in a form that is invariant with respect to rotations and translations and that some functions of those invariants can convey the desired geometric prior information independent of the level of activity in the ROI'S, except at very low levels.

4287 (LBL-PUB–5348) **Proton Therapy Research and Treatment Center.** Goodnight, J.E. Jr. (University of California Davis Medical Center, Sacramento, CA (United States). Cancer Center); Alonso, J.R. Lawrence Berkeley Lab., CA (United States). 1 May 1992. 52p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE92041202. Source: OSTI; NTIS; GPO Dep.

This Grant proposal outlines the steps that will be undertaken to bring the UC Davis Proton Therapy Research and Treatment, known locally as the Proton Therapy Facility (PTF), through its design and construction phases. This application concentrates on the design phase of the PTF project.

4288 (LUNFD6-NFRA–1027-1-34-1992) **Magnetic field perturbation in proton MR imaging - A study of a contrast agent and of distortions due to metallic implants.** Olsson, M. Lund Univ. (Sweden). Dept. of Radiation Physics. 1992. 34p. (LUMEDW-MERI–1027-1-34-1992.). Order Number DE93607495. Source: OSTI; NTIS; INIS.

Perturbations of the static magnetic field in proton MR imaging (NMR imaging, MRI, MRT) result in image distortion and/or signal loss. An investigation of a superparamagnetic contrast agent for MR imaging has been performed. Magnetite particles were embedded in biodegradable starch spheres with a diameter of one micrometer. Animal experiments showed that the agent was quickly accumulated in the reticulo-endothelial system (RES), causing a decrease in signal intensity in this region. Diffusion within the locally generated magnetic field perturbation is responsible for signal loss in spin-echo images. Furthermore, the magnetic properties of various aneurysm clips were investigated to determine which clips could be used safely in a clinical MR investigation. MR artifacts caused by the metallic clips were studied using a geometric phantom. Non-ferromagnetic clips were concluded to be safe for examinations with medium field (0.3 tesla) MR imaging systems. A comparison study between MR and CT was performed on patients harbouring intracranial, nonferromagnetic aneurysm clips. The artifacts close to the clips were equally serve for MR and CT, but at some distance, the MR images were much less affected than the CT images. Finally, a computer program capable of simulating any realistic MR imaging situation has been developed. Raw data matrices are obtained by solving the Bloch equations. Corrections for intravascular spin behaviour have been implemented together with efficient algorithms. A quantitative investigation of signal displacement and signal loss, caused by small metallic implants, has been performed by computer simulation. An exact expression for the magnetic field outside a homogeneous ellipsoid in an external magnetic field has been derived. Distortions in MR images, caused by perturbing ellipsoids of different shapes and orientations, were studied. (30 refs.) (au).

4289 (ORNL/TM–12010) **Production capabilities in US nuclear reactors for medical radioisotopes.** Mirzadeh, S. (Oak Ridge National Lab., TN (United States)); Callahan, A.P.; Knapp, F.F. Jr.; Schenter, R.E. Oak Ridge National Lab., TN (United States). Nov 1992. 192p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93003669. Source: OSTI; NTIS; INIS; GPO Dep.

The availability of reactor-produced radioisotopes in the United States for use in medical research and nuclear medicine has traditionally depended on facilities which are an integral part of the US national laboratories and a few reactors at universities. One exception is the reactor in Sterling Forest, New York, originally operated as part of the Cintichem (Union Carbide) system, which is currently in the process of permanent shutdown. Since there are no industry-run reactors in the US, the national laboratories and universities thus play a critical role in providing reactor-produced radioisotopes for medical research and clinical use. The goal of this survey is to provide a comprehensive summary of these production capabilities. With the temporary shutdown of the Oak Ridge National Laboratory (ORNL) High Flux Isotope Reactor (HFIR) in November 1986, the radioisotopes required for DOE-supported radionuclide generators were made available at the Brookhaven National Laboratory (BNL) High Flux Beam Reactor (HFBR). In March 1988, however, the HFBR was temporarily shut down which forced investigators to look at other reactors for production of the radioisotopes. During this period the Missouri University Research Reactor (MURR) played an important role in providing these services. The HFIR resumed routine operation in July 1990 at 85 MW power, and the HFBR resumed operation in June 1991, at 30 MW power. At the time of the HFBR shutdown, there was no available comprehensive overview which could provide information on status of the reactors operating in the US and their capabilities for radioisotope production. The obvious need for a useful overview was thus the impetus for preparing this survey, which would provide an up-to-date summary of those reactors available in the US at both the DOE-funded national laboratories and at US universities where service irradiations are currently or expected to be conducted.

4290 **Process for measuring low cadmium levels in blood and other biological specimens.** Peterson, D.P.; Huff, E.A.; Bhattacharyya, M.H. To Dept. of Energy. 29 Jan 1991. USAA patent application 7-647,07. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE93001990. Source: OSTI; NTIS; GPO Dep.

A process for measuring low levels of cadmium in blood and other biological specimens is provided without interference from high levels of alkali metal contaminants by forming an aqueous solution and without contamination by environmental cadmium absent the proteins from the specimen, selectively removing cadmium from the aqueous solution on an anion exchange resin, thereby removing the alkali metal contaminants, resolubilizing cadmium from the resin to form a second solution and analyzing the second solution for cadmium, the process being carried out in a cadmium-free environment.

4291 **Thermal manipulator of medical catheters.** Chastagner, P. To Dept. of Energy. 4 Mar 1991. USAA patent application 7-663,49. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93002006. Source: OSTI; NTIS; GPO Dep.

This invention consists of a maneuverable medical catheter comprising a flexible tube having a functional tip. The catheter is connected to a control source. The functional tip of the catheter carries a plurality of temperature activated elements arranged in parallel and disposed about the functional tip and held in spaced relation at each end. These elements expand when they are heated. A plurality of fiber optic bundles, each bundle having a proximal end attached to the control source and a distal end attached to one of the elements carry light into the elements where the light is absorbed as heat. By varying the optic fiber that is carrying the light and the intensity of the light, the bending of the elements can be controlled and thus the catheter steered. In an alternate embodiment, the catheter carries a medical instrument for gathering a sample of tissue. The instrument may also be deployed and operated by thermal expansion and contraction of its moving parts.

4292 (CONF-910550–, pp. 175-183) **Improvement of cellulase activity in Trichoderma.** Sandhu, D.K. (Guru Nanak Dev Univ., Amritsar (India)); Bawa, S. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and

chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

The conditions for the production and regeneration of protoplasts from Trichoderma reesei QM 9414 were optimized. Mutants obtained from Trichoderma reesei QM 9414 were crossed, using protoplast fusion. In the crosses attempted, the diploids showed enhanced yields of exoglucanase, whereas the yield of endoglucanase and β-glucosidase was intermediate as compared to their respective parents. In some of the segregants, the yields were further enhanced, indicating the use of protoplast fusion techniques in developing breeding strategies for strain improvement. The study of cellulase mutants as such and the segregants revealed that the three cellulase components appear to be regulated independently of each other.

4293 (AECS-A/RRE–3) **The effect of irradiation of barley seeds with low doses on the increase of their resistance to salinity during germination period.** Al-Ain, Farid (Atomic Energy Commission, Damascus (Syrian Arab Republic)); Sharabi, N.E. Atomic Energy Commission, Damascus (Syrian Arab Republic). Jun 1992. 41p. (In Arabic). Order Number DE93607285. Source: OSTI; NTIS (US Sales Only); INIS.

Seeds of barley variety (ACSAD- 176) were irradiated with (0, 10, 15, 20, 30 and 40 Gy) of gamma rays, and sown in two different media, one is a solution and the other is soil. In each medium four different concentrations of salinity (0, 7, 12 and 17 m.m/cm) where used. For the solution medium four replicates were used in a randomized complete block design. For the soil three replicates were used in a complete randomized design Factorial type. Germination percentage (%G) and plants height (P.h) were measured. In the solution medium the results showed significant increase in the (%G) between the control and the doses 10, 15, and 20 Gy at salinity concentration of 7 m.m/cm. However at salinity concentrations of 12 and 17 m.m/cm there was significant increase for the doses 10, 15, 20 and 30 Gy. As for the effect on (P.h) there was a nonsignificant increase for all the doses of salinity concentrations of 0 and 7 m.m/cm compared to the control. However a doses of 10 Gy resulted in a nonsignificant increase at all salinity concentrations. In the soil the results showed that only at salinity concentration of 17 m.m/cm all the doses showed significant increase in the (%G) compared to the control, there was a nonsignificant increase at the doses of 10 Gy and salinity concentration of 7 m.m/cm, however for salinity concentration of 12 m.m/cm the doses of 15 and 20 Gy caused nonsignificant increase. For (P.h) all doses caused a nonsignificant increase at one salinity concentration (17 m.m/cm) only. (author). 24 refs., 51 figs., 16 tabs.

4294 (AECS-A/RRE–4) **Dinitrogen fixation estimates in vetch-barley swards using ^{15} N methodology.** Kurdali, Fawaz (Atomic Energy Commission, Damascus (Syrian Arab Republic)); Sharabi, N.E. Atomic Energy Commission, Damascus (Syrian Arab Republic). Jul 1992. 16p. (In Arabic). Order Number DE93607286. Source: OSTI; NTIS (US Sales Only); INIS.

N_2 fixation in vetch (Vicia Sativa) grown alone and in mixture with barley (Hordeum vulgare) in pots was evaluated using ^{15} N isotope dilution method. Two harvests were made over the growing season. The proportion of the above-ground N derived from atmospheric N_2 (% Ndfa) in mixed vetch was significantly higher than that of vetch in pure culture for the different harvests. However, this increase was not accompanied with the amount of N_2 fixation. On the other hand, no significant differences were observed in N-content or in N-derived from soil between barley grown in mixture and in mono culture, in spite of the difference in the number of plants between the two cropping systems. These results indicate a high competing capacity of barley for soil nitrogen in mixed culture. So, in further investigations the vetch: barley seeding ratio must be considered in order to reduce the competition effect. Barley grown together with vetch had lower atom %^{15} N excess than barley grown in mono culture because it may have received some of their N from N-released by the legume in the second herbage but not in the first. On the other hand, nitrogen accumulation in the two successive harvests was higher than that in the plants harvested only once. Overall, these results indicate the importance of mixed crops for forage production. Based on these results, further investigation must be carried out in the field especially under rain-fed conditions. (author). 6 refs., 2 figs., 3 tabs.

4295 (AI-DOE–13557-Vol.4) **CACI: The Cesium-137 Agricultural Commodities Irradiator: Final design report: Volume 4, Specifications.** Rockwell International Corp., Canoga Park, CA (United States). Rocketdyne Div. Dec 1986. 597p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-85AL25763. Order Number DE93002433. Source: OSTI; NTIS; GPO Dep.

This report provides a complete description of the final detailed design of the Cesium-137 Agricultural Commodities Irradiator (CACI). The design was developed and successfully completed by the Rocketdyne Division of Rockwell International for the US Department of Energy (DOE). The CACI project was initiated in April 1985 under DOE's Byproducts Utilization Program, with the objectives of transferring food irradiation technology to the industry and thereby demonstrating a beneficial use for the ^{137}Cs nuclear by-product isotope. As designed, CACI will meet the intended requirements for research, development, and demonstration of irradiation processing of food. Further, as shown in the safety analyses performed during the project, the design conforms to all the safety and licensing requirements set forth for the project. The original scope of the CACI project included completion of its construction. However, the project was terminated for the convenience of the government during the final design phase in February 1986 for lack of a specific site. This Volume, IV, provides specifications as developed for the CACI final design.

4296 (AI-DOE–13557-Vol.5) **CACI: The Cesium-137 Agricultural Commodities Irradiator: Final design report: Volume 5, Plans, criteria, and requirements.** Rockwell International Corp., Canoga Park, CA (United States). 4300 (CNEN-DIN–04/83) **Bibliographic review of works accomplished about irradiated chicken, fish and fish products , spices and condiments.** Bernardes, B.; Dias Filho, M. Comissao Nacional de Energia Nuclear (CNEN), Rio de Janeiro, RJ (Brazil). Dept. de Instalacoes e Materiais Nucleares. Jul 1983. 45p. (In Portuguese). Order Number DE93607296. Source: OSTI; NTIS (US Sales Only); INIS.

Table of foods that can be irradiated and its respective nominal doses are shown. Bibliographic reviews of works performed about irradiated chicken, fish and fish products, spices and condiments are shown. The irradiation purpose in chicken were to increase the shelf-life and to eliminate the pathogenic microorganism in chicken stored below 10^0 C; in fish and fish products the purposes were to control the insect infestation in dry-fish during the storage and the sell exposure to reduce the macrobian charge in packed and non packed fish and in fish products. To reduce pathogenic microorganism in packing and unpacking fish; in spices and condiments to control the insect infestation, to reduce the microbial contamination. (L.M.J.).

4301 (CONF-9109358–, pp. 19) **Aflatoxigenic isolates of Aspergillus flavus naturally contaminating common feedstuff in Jordan and suitability of some feed as natural substrates for aflatoxin production.** Natour, R.M. (University of Jordan, Amman (Jordan)); Rabba, J.A.A.; Salhab, A. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

This work was carried out on 249 samples of different feedstuffs, commonly used in different dairy farms in Jordan, to investigate their natural contamination with aflatoxigenic isolates of A. flavus group. The suitability of some feeds as natural substrates for aflatoxin production, with special reference to type and quantity of produced aflatoxins were also studied. On the basis of microscopic and morphological identification, isolates of A. flavus group were found in 47.4% of the various feedstuffs examined. Twenty two percent of these isolates were aflatoxigenic. Most of these toxigenic isolates (76.9%) showed the ability to produce both aflatoxins B_1 and B_2, under laboratory conditions; some of them (23.1%) produced only aflatoxin B_1; but none produced the G-type aflatoxin. Out of 7 different feedstuffs tested for their suitability as natural substrates for aflatoxin production, only 5 samples were found to support the production aflatoxins by A. parasiticus NRRL 2999, but at low levels. These samples were four types of concentrate and waste feedstuffs were low, still they represent a potential health hazard, specially when such feedstuffs are stored for a long period of time.

4303 (IAEA-NAHRES–8) **Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.** International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. 130p. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26-29 Nov 1990). Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

The objective of this Co-ordinated Research Programme is to help establish competence in the use of stable isotope techniques, particularly in developing countries. This report summarizes the discussions that took, place during the Second Research Co-ordination Meeting, held in Bangalore in November 1990. Working papers presented by the participants are included as annexes. Refs, figs and tabs.

4304 (IAEA-NAHRES–8, pp. 10.1-10.13) **Protein metabolism in Papua New Guinea: A study using stable isotopes.** Brown, T. (Papua New Guinea Inst. of Medical Research, Mandang (Papua New Guinea)). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5192. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

Adult Papua New Guineans have low intakes of energy, protein and other nutrients, but they appear physically well developed and show no signs of malnutrition. It appears that a number of adaptive mechanisms are at work, but it is desirable to repeat the experiments under more controlled conditions. This project is designed to investigate the nitrogen balance and protein turnover of coastal Papua New Guineans consuming different diets. 22 refs.

4305 (IAEA-NAHRES–8, pp. 11.1-11.6) **Application of ^{15}N amino acid absorption in chronic enteropathy and hepatic diseases in infants.** Palibroda, N. (Institutul de Tehnologie Izotopica si Moleculara, Cluj-Napoca (Romania)); Culea, M.; Chiriac, M.; Miu, N. International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5193. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

The aim of this work is to compare the distribution of N-15 (derived from ^{15}N-glycine) between body fluids of infants in healthy subjects and in subjects suffering from intestinal malabsorption. The data obtained so far support the idea that the malabsorption group has lower ^{15}N elimination in urine and higher elimination in faeces. 5 refs, 5 tabs.

4306 (IAEA-NAHRES–8, pp. 12.1-12.3) **Support for studies with doubly labelled water of adaptation in human energy needs in India, Malaysia and Mexico.** Haggarty, P. (Rowett Research Inst., Aberdeen (United Kingdom)). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5371. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

This study aims to address adaptation to low energy intakes by metabolic/behavioural means or via the effects of chronic undernutrition on body composition. The outcome will be of great importance in the verification and refinement of the WHO/FAO/UNU equations for the prediction of energy needs in developing countries.

4307 (IAEA-NAHRES–8, pp. 13.1-13.3) **Synthesis of ^{13}C labelled lactose for metabolic studies.** Moyna, P. (Facultad de Quimica, Montevideo (Uruguay)). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5372. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

The most common cause of diarrhoea in Uruguay is lactose intolerance, and to determine the origin of diarrhoea in individual cases a deep and fast clinical method is highly desirable. The present report discusses the synthesis of c-13-labelled lactose and two separation methods for detecting sugars in samples of faeces.

4308 (IAEA-NAHRES–8, pp. 14.1-14.7) **Reference materials and evaluation of the precision and accuracy of the DLW method.** Haggarty, P. (Rowett Research Inst., Aberdeen (United Kingdom)). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

This report describes a simple test of the accuracy of the doubly-labelled water method for calculation of carbon dioxide production. 1 ref., 4 figs.

4309 (IAEA-NAHRES–8, pp. 15.1-15.2) **Hepatic protein metabolism in man.** Klein, P.D. (Children's Nutrition Research Center, Houston (United States)). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

Apolipoprotein-B100 circulating in the very low density lipoprotein particles has a very rapid turnover rate and is almost exclusively of hepatic origin. It thus provides a direct index of the isotopic enrichment of the hepatic amino acids from which plasma proteins are derived.

4310 (IAEA-NAHRES–8, pp. 3.1-3.10) **Prognostic significance of protein-calorie malnutrition in post-virus hepatitis cirrhosis and the design of diet therapy based on Chinese food using isotope tracers.** Xia Zongqin (Shanghai Medical Univ., SH (China)). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5189. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

This document reports studies of the metabolism of patients with post-viral hepatitis cirrhosis. Three separate areas are investigated by means of tracer techniques: whole-body protein synthesis and breakdown; energy expenditures; and protein turnover and leucine oxidation. 12 refs, 8 tabs.

4311 (IAEA-NAHRES–8, pp. 4.1-4.10) **Metabolic tracer studies with nitrogen-15 in children.** Jung, K. (Federal Research Centre Leipzig-Halle, Leipzig (Germany)); Krumbiegel, P.; Faust, H. International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5190. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

This paper reports the results of metabolic studies on children, performed using N-15 tracer techniques. Separate experiments described address studies of liver function, diagnosis of gastric Helicobacter pylori infections and investigations of the metabolic effects of recombinant human growth hormone on Turner Syndrome girls. 9 refs, 8 figs.

4312 (IAEA-NAHRES–8, pp. 5.1-5.18) **Energy-protein requirements and adaptation during nutritional recovery.** Vasquez-Velasquez, L. (INCAP, Guatemala City (Guatemala)); Peres, J.M.; Nitsch, A.; Bulux, J.; Melgar, S. de; Prentice, A. International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5451. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

Malnutrition is one of the world's most widely prevalent pathological conditions that affects people of all ages. The detrimental effects of malnutrition often become evident in children, in whom both physical and mental development are compromised. The present paper reports preliminary results of a project to asses the protein and energy requirements for nutritional recovery. It is also planned to investigate the adaptive mechanisms resulting from chronic low food intake in severely malnourished children. 12 refs, 2 figs, 7 tabs.

4313 (IAEA-NAHRES–8, pp. 6.1-6.12) **Studies with doubly-labelled water of adaptation in humans.** Shetty, P.S. (St. John's Medical College, Bangalore (India). Nutrition Research Centre). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5368. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

Preliminary studies are presented addressing the effects of short-term energy supplementation of undernourished subjects, and a series of experiments to investigate the relationship between "food quotients" and "respiratory quotients" and the use of these quotients to calculate free living energy expenditure is also reported. The observation, although preliminary, raise important technical problems relating to the methods used for converting CO_2 production rate to total energy expenditure. 10 refs.

4314 (IAEA-NAHRES–8, pp. 7.1-7.12) **Energy needs of lactating mothers and breast-feeding children in Senegal.** Ferro Luzzi, A. (Istituto Nazionale della Nutrizione, Rome (Italy)); Chevassus Agnes, S.; Borne Godeluck, M.M.; Yameogo, P.; Ndiaye, A.M. International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5833/5834. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

This project aims to use isotopic techniques to measure energy expenditure and breast milk intake of children, and the energy expenditure and breast milk production of lactating mothers. Two separate methods are being used, both of which involve the use of doubly labelled water. The present report presents growth rate date on the children and data on how they spend their time; the isotopic analysis has not yet been performed. 5 refs, 5 tabs.

4315 (IAEA-NAHRES–8, pp. 8.1-8.5) **Studies with doubly-labelled water of adaptation in human energy needs in Malaysia.** Mohd Ismali Noor (Department of Food Science and Nutrition Bangi, Selangor (Malaysia)). International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5369. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

The basal metabolic rates of 42 adult males (Malay, Chinese and Indians) have been calculated from measurements of oxygen concentration and volume of expired air. Further experiments will use doubly-labelled water to evaluate the total daily energy expenditure of Malaysians. 5 refs, 3 tabs.

4316 (IAEA-NAHRES–8, pp. 9.1-9.10) **The effect of continuous work on discretional energy expenditure in male adult construction workers in northern Mexico.** Valencia, M.E. (Centro de Investigacion y Desarollo, A.C. Hermosillo Sonora (Mexico)); Haggarty, P.; McNeill, G.; Gonzales, L.; Moya, S.; Saucedo, S.; Esparza, J.; Pinelli, A. International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. Contract 5370. (CONF-9011308–: 2. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Bangalore (India), 26 Nov 1990). In *Co-ordinated research programme applications of stable isotope tracers in human nutrition research: Report on the second research co-ordination meeting Bangalore, India, 26-29 November 1990.* 130p. Order Number DE93607313. Source: OSTI; NTIS (US Sales Only); INIS.

The objective of this study is to measure the variations in discretional energy expenditure in male adult construction workers of different body mass index when exposed to a heavy and prolonged workload. It is also intended to compare the factorial method based on indirect calorimetry with the doubly-labelled water system for the estimation of free living energy expenditure. 15 refs, 5 tabs.

4317 (IAEA-NAHRES–10) **Co-ordinated research programme on applications of stable isotope tracers in human nutrition research: Report on the third research co-ordination meeting Houston, Texas, USA, 6-9 April 1992.** International Atomic Energy Agency, Vienna (Austria). Section of Nutritional and Health-Related Environmental Studies. 1992. 30p. (CONF-9204199–: 3. research co-ordination meeting on applications of stable isotope tracers in human nutrition research, Houston, TX (United States), 6-9 Apr 1992). Order Number DE93607312. Source: OSTI; NTIS (US Sales Only); INIS.

This document provides a very brief report on the final Research Co-ordination Meeting of this Co-ordinated Research Project (CRP): the final report on the CRP will be published by the IAEA in the IAEA-TECDOC series. The present document contains a detailed proposal for a new Co-ordinated Research Programme on "Stable Isotope Tracer Techniques for Studies on Protein-Energy Interactions", and a brief series of notes on stable isotopic methods for investigating protein and amino-acid metabolism in man. Refs.

4318 (INIS-BR–2957) **Standardization of human thyrotropin radioimmunoassay and its application to the purification of this hormone to the preparation of the assay reagents.** Lin, L.H. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1991 168p. (In Portuguese). Order Number DE93607314. Source: OSTI; NTIS (US Sales Only); INIS.

The various steps that are necessary for setting up the thyrotropin radioimmunoassay are presented below. Radioiodination was carried out through the Chloramine T method and the labeled purification performed on Sephadex G-100. Purification of human thyrotropin from side fractions obtained during the purification of growth hormone was carried out in order to obtain a pure reagent for use in the radioimmunoassay. The employment of the hormone obtained was evaluated as the radioimmunoassay tracer in comparison with that prepared from the hormone received from the NIDDKD, U.S.A. The results indicated that although it was not possible to obtain a hormone with a purity degree adequate to be used as the tracer, enough experience was acquired for the isolation of thyrotropin. (author).

4319 (INIS-BR–3007) **Effect of the histaminergic antagonist over the pulmonary oedema growth in P. berghei - infected mice.** Martins, M.A. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1985 75p. (In Portuguese). Order Number DE93607315. Source: OSTI; NTIS (US Sales Only); INIS.

The involvement of histaminergic mechanisms in the pathogenesis of pulmonary oedema observed in p. berghei - infected mice was investigated. Histamine concentrations in plasma and whole blood of infected and normal mice were determined by radioenzymatic assay during the seven days of the infection. Elevated plasma and whole blood histamine levels were found at the last stages of infection (sixth day and seventh day) after intraperitoneal injection of parasitized erythrocytes, showing a close temporal correlation between the development of the oedema and the elevation of the circulating histamine concentrations. The participation of H 1 and H 2 receptors in the increase in vascular permeability (IVP) induced by histamine was also verified. (author).

4320 (INIS-BR–3022) **The concentrations of ^{226} Ra and ^{210} Pb in food cultivated in Pocos de Caldas.** Hollanda Vasconcellos, L.M. de. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1984 104p. (In Portuguese). Order Number DE93607297. Source: OSTI; NTIS (US Sales Only); INIS.

The aim of this study is to determine the average concentrations of ^{226} Ra and ^{210} Pb in vegetables widely cultivated in the region, mainly potatoes, carrots, beans and corn which are the main agricultural products (considering production and human consume) in the region and estimation of the average transfer factors soil-foodstuff for both radionuclides. The total ^{226} Ra and ^{210} Pb content in the soil was determined by gamma spectrometry. The exchangeable fraction was obtained by ammonium acetate solution extraction. The ^{226} Ra was analysed by the classical radon emanation procedure and the ^{210} Pb was isolated by a radiochemical procedure and determined by radiometry of its daughter ^{210} Bi beta emissions with a Geiger Mueller counter. (author).

4322 (AECS-PR/RSS–42) **Radioactive contamination and decontamination procedures.** Othman, Ibrahim (Atomic Energy Commission, Damascus (Syrian Arab Republic)); Ali, A.F.; Kheitou, M. Atomic Energy Commission, Damascus (Syrian Arab Republic). Jun 1992. 33p. (In Arabic). Order Number DE93607349. Source: OSTI; NTIS (US Sales Only); INIS.

This report presents sources, types, nature and classification of radioactive contamination. It also cover the protection procedures for decontamination. It is inevitable to understand the sources and processes of contamination to remove it effectively. (author). 11 refs., 11 tabs.

4323 (DOE/ER/60417–006) **Fast neutron dosimetry: Progress report, 1 July 1991–1 September 1992.** DeLuca, P.M. Jr.; Pearson, D.W. Wisconsin Univ., Madison, WI (United States). Dept. of Medical Physics. [1992]. 85p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER60417. Order Number DE93003659. Source: OSTI; NTIS; INIS; GPO Dep.

This progress report concentrates on two major areas of dosimetry research: measurement of fast neutron kerma factors for several elements for monochromatic and white spectrum neutron fields and determination of the response of thermoluminescent phosphors to various ultra-soft X-ray energies and beta-rays. Dr. Zhixin Zhou from the Shanghai Institute of Radiation Medicine, People's Republic of China brought with him special expertise in the fabrication and use of ultra-thin TLD materials. Such materials are not available in the USA. The rather unique properties of these materials were investigated during this grant period.

4324 (DOE/ER/60455–T4) **Mechanisms for radiation damage in DNA: Progress report, June 1, 1992–May 31, 1993.** Sevilla, M.D. Oakland Univ., Rochester, MI (United States). Dec 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER60455. Order Number DE93003715. Source: OSTI; NTIS; GPO Dep.

In this project we have proposed several mechanisms for radiation damage and recently radiation protection to DNA and its constituents, and have detailed a series of experiments utilizing electron spin resonance spectroscopy, HPLC, GC-mass spectroscopy and ab initio molecular orbital calculations to test the proposed mechanisms. In this years work we have performed experiments which elucidate the role of hydration water on DNA radiation damage, continued the investigation of the localization of the initial charges on DNA and employed ab initio molecular orbital theory to gain insight into the initial events of radiation damage to DNA. Ab initio calculations have provided an understanding of the energetics envolved in anion and cation formation, ion radical transfer in DNA as well as proton transfer with DNA base pair radical ions. This information has aided the formation of new radiation models for the effect of radiation on DNA. During this fiscal year four articles have been published, two are in press, two are submitted and several more are in preparation. Six papers have been presented at scientific meetings. This years effort includes a review article on the "Chemical Consequences of Radiation Damage to DNA". This review presents an overview of this field at this time.

4325 (DOE/ER/60464–6) **Direct assay of radiation-induced DNA base lesions in mammalian cells: Technical progress report, November 1, 1989–September 1, 1992.** Bowman Gray School of Medicine, Winston-Salem, NC (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-86ER60464. Order Number DE93001832. Source: OSTI; NTIS; INIS; GPO Dep.

Adenine (Ade), 2'-deoxyadenosine (dAdo), 5'-deoxyadenosine monophosphate (dAUT), single stranded poly adenylic acid [poly (dA)], double stranded deoxyadenylic-thymidylic acid [ds poly (dA-T)] and salmon testis DNA were irradiated with 500 Gy under oxic and anoxic conditions. The major damage products were analyzed by BPLC with optical detection and quantitated in terms of the percentage of the adenosine in each model compound found as a specific damage product. Outside of the Ade free base, 8-OH-dAdo was the major oxic damage product from each model compound. The type and quantity of the major damage products depended on the sequence and conformation of the model compounds under anoxic conditions. When dAdo and dAMP were irradiated under anoxic conditions, the major damage product was either the R or S isomer of 8,5'cdAdo and little Ade or α-dAdo was observed. However, when poly(dA), poly(dA-dT), and salmon testis DNA were γ-irradiated under nitrogen, the major deoxyadenosine damage product was identified as the α-anomer of deoxyadenosine. No α-deoxyadenosine was detected after irradiation under oxic conditions. The presence of nucleotides with the α-configuration at the anomeric carbon atom in the DNA chain may have a significant effect on its tertiary structure and possibly modify its biological activity.

4326 (DOE/ER/60533–5) **The study of human mutation rates: Progress report, 1989–1992.** Neel, J.V. Michigan Univ., Ann Arbor, MI (United States). [1992]. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-87ER60533. Order Number DE93003658. Source: OSTI; NTIS; INIS; GPO Dep.

We will describe recent developments regarding the question of induced mutations in the survivors of the atomic bombings of Hiroshima and Nagasaki. As part of that work we, describe some developments with respect to the Amerindian blood samples collected under DoE sponsorship between 1964 and 1982. Then developments regarding the application of two-dimensional polyacrylamide gel electrophoresis (2-D PAGE) to the study of genetic variation and mutation affecting protein characteristics. In particular, we will report on the identification and isolation of genes of especial interest as reflected in the behavior of the proteins which they encode.

4327 (DOE/ER/60668–5) **Radon: Chemical and physical processes associated with its distribution: Annual progress report.** Castleman, A.W. Jr. Pennsylvania State Univ., University Park, PA (United States). Dept. of Chemistry. [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER60668. Order Number DE93003718. Source: OSTI; NTIS; INIS; GPO Dep.

Assessing the mechanisms which govern the distribution, fate, and pathways of entry into biological systems, as well as the ultimate hazards associated with the radon progeny and their secondary reaction products, depends on knowledge of their chemistry. Our studies are directed toward developing fundamental information which will provide a basis for modeling studies that are requisite in obtaining a complete picture of growth, attachment to aerosols, and transport to the bioreceptor and ultimate incorporation within. Our program is divided into three major areas of research. These include measurement of the determination of their mobilities, study of the role of radon progeny ions in affecting reactions, including study of the influence of the degree of solvation (clustering), and examination of the important secondary reaction products, with particular attention to processes leading to chemical conversion of either the core ions or the ligands as a function of the degree of clustering.

4328 (DOE/ER/61085–2) **[Nanometer scale exciton spectroscopy and photochemistry: Dynamic imaging of DNA structure-activity relations and radiation signatures]: Progress report, July 25, 1991–September 30, 1992.** Michigan Univ., Ann Arbor, MI (United States). [1992]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER61085. Order Number DE93003341. Source: OSTI; NTIS; INIS; GPO Dep.

Our aim is to investigate, on the molecular level at a spatially resolved mode of operation, structure-activity relations of DNA and their sensitivity to ionizing radiation. This entails in-vitro (and later in-vivo) ultra-resolved microscopy, spectroscopy and chemical sensing, with non-destructive probing.

4329 (DOE/RW–0362-TG) **Science, society, and America's nuclear waste: Unit 2, Ionizing radiation: Teacher guide.** USDOE Office of Civilian Radioactive Waste Management, Washington, DC (United States). [1992]. 169p. Sponsored by USDOE, Washington, DC (United States). Source: OSTI (Free of Charge); INIS.

"Science, Society and America's Nuclear Waste" is a four-unit secondary curriculum. It is intended to provide information about scientific and societal issues related to the management of spent nuclear fuel from generation of electricity at nuclear powerplants and high-level radioactive waste from US national defense activities. The curriculum, supporting classroom activities, and teaching materials present a brief discussion of energy and electricity generation, including that produced at nuclear powerplants; information on sources, amounts, location, and characteristics of spent nuclear fuel and high-level radioactive waste; sources, types and effects of radiation; US policy for managing and disposing of spent nuclear fuel and high-level radioactive waste and what other countries are doing; and the components of the nuclear waste management system.

4330 (INIS-BR–2958) **Theoretical-experimental study of the non-thermal effects of the polarized laser radiation in living tissues.** Ribeiro, M.S. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1991 116p. (In Portuguese). Order Number DE93607212. Source: OSTI; NTIS (US Sales Only); INIS.

In the present research we had as a fundamental objective to analyse the non-thermal effects of the laser polarized light in biological tissues. These effects were performed with low power laser output. The theoretical procedure consisted in looking for a simple model which connects the effect of light polarized with microscopically rough tissues using well established physical concepts. Experimentally, we created artificial wounds on the back of animals using liquid nitrogen (this method was chosen because it does not interfere in the biochemistry of the animal tissue). For the wound irradiation we have utilized a He-Ne attached to an optical system. (author).

4331 (INIS-BR–2959) **Internal contamination by natural uranium: monitoring by analysis of urine of individuals exposed by occupational inhalation.** Ramalho, A.T. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1982 132p. (In Portuguese). Order Number DE93607261. Source: OSTI; NTIS (US Sales Only); INIS.

Urine samples from men working at Usina Santo Amaro (USAM - State of Sao Paulo), a monazite refinery, were analysed for uranium concentration, using fluorometric analysis and alpha spectrometry. All samples analysed presented uranium concentration below the lower limit of detection. Theoretical values were calculated for uranium concentration in urine samples from workers at the annual limit of intake (ALI) for inhalation of natural uranium, recommended in Publication 30 of the International Commission on Radiological Protection (ICRP, 1979). The two different methods used for analysis of natural uranium concentration in the urine samples were compared: fluorimetry and alpha spectrometry. (author).

4332 (INIS-BR–2960) **Lethal effects of solar radiation in proficient and deficient bacteria in repair systems.** Sousa Neto, A. de. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1980 79p. (In Portuguese). Order Number DE93607205. Source: OSTI; NTIS (US Sales Only); INIS.

A study of the lethal action of solar radiation on strains of E.coli K12, proficient or deficient in repair systems, as well as the wild type strain gene products are involved in repair of damage induced by solar radiation. The inactivation of the various bacterial strains (normalized to a dose equivalent to radiation at a wavelength 254 nm) suggests that the more energetic wavelengths of the solar spectrum (290-320 nm) could be responsible for the primary damage that occurs in the DNA. The reduction in the shoulder of the survival curve in wild type strains in indicative of induction of sub-lethal damage in this region of the curve. Analysing solar inactivation curves of the bacterial strains (normalised by spore dosimetry) together with those of the same strains irradiated with UV at 254 nm, it was evident that 254 nm is not the ideal wavelength for comparison. This analysis also indicated that in addition to damage to DNA, other factors are involved in the solar radiation inactivation of wild type strains. (author).

4333 (INIS-BR–2961) **Lysogenic induction in Lex AI Escherichia coli mutants: characterization of the induction and prophage repressor influence.** Carvalho, R.E.S. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1982 84p. (In Portuguese). Order Number DE93607206. Source: OSTI; NTIS (US Sales Only); INIS.

SOS functions require new synthesis of protein and have been described as dependent on both the rec A and lex A genes. The induction of prophage was studied in bacterial strains lysogenic for a series of phages which synthesize different levels of repressor (λ, λ_{imm434} and λ_{imm434}) and was compared to W-reactivation. Prophage induction was detected in lex AI mutants although at a slightly lower level and requiring two times longer when compared with wild-type. The optimum UV-dose for induction differed for each lysogenic strain and correlated with the level of repressor.

4334 (INIS-BR–2962) **Study of the thorium incorporation by inhalation in individuals occupationally exposed.** Holanda e Vasconcellos Carvalho, B. de. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1983 215p. (In Portuguese). Order Number DE93607366. Source: OSTI; NTIS (US Sales Only); INIS.

A mathematical model describing the metabolism of inhaled thorium in the human body was developed. Through this model theoretical limits of excretion were calculated for workers of a monazite plant (Usina Santo Amaro). This limits were based on International Commission on Radiological Protection publication 30, 1979. Excreta samples from twelve workers of Usina Santo Amaro were collected and analysed for thorium. All samples were bellow the theoretical limits of excretion indicating that Usina Santo Amaro workers are exposed to thorium levels bellow the Annual Limits of Intake recommended by ICRP, publication 30. (author).

4335 (INIS-BR–2967) **Dominant lethal mutations research in mice fed with irradiated black beams.** Andrade, Z.P. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Inst. de Biologia. 1982 63p. (In Portuguese). Order Number DE93607213. Source: OSTI; NTIS (US Sales Only); INIS.

To evaluate the potential mutagenic effects of irradiated black beans (Phaseolus vulgaris) with conservation purpose, in germ cells of mice, dominant lethal assay were employed. Three groups of albino swiss male mice (S W-55) were fed with a normal ration, or unirradiated or irradiated (0,2; 0,5; 1; 5; 10; 15 e 20 KGy) test diets for eight weeks. After the feeding period the males were mated with groups of untreated females mice for four consecutive weeks. Numbers of pregnancy rates females were observed. The females were autopsied at mid-term pregnancy for evaluation of dominant lethal mutations. (author).

4336 (INIS-BR–2981) **Personnel neutron monitoring based on albedo technique.** Carvalho, W.B.D. de. Instituto Militar de Engenharia (IME), Rio de Janeiro, RJ (Brazil). 1975 88p. (In Portuguese). Order Number DE93607367. Source: OSTI; NTIS (US Sales Only); INIS.

This work deals with the study, design and test of a personal neutron monitor based on the detection of albedo neutrons from the body and its further relation to the incident flux. By this method, neutrons of energies below about 100 KeV can be efficiently detected, providing good information in the region where the biological effectiveness of neutron radiation starts to rise. The system consists of a pair of Thermoluminescent Detectors (^{6} LiF - ^{7} LiF) $\approx$ inside a polyethylene moderating body, in order to increase the sensitivity. The surface of the dosimeter facing away from the body is covered by a layer of a borated resin to assure appropriate shielding of incident low energy neutrons. The response of the dosimeter to monoenergetic neutrons from a 3 MeV Van de Graaff, to Am Be neutrons and to neutrons from a thermal column was investigated. The directional sensitivity, the effect of beam divergence was well as the effect of changes in dosimeter-to-body distances were also studied. (author).

4337 (INIS-BR–2986) **Effect of ^{60} Co gamma radiation on crystalline proteins.** Bernardes, D.M.L. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1991 67p. (In Portuguese). Order Number DE93607199. Source: OSTI; NTIS (US Sales Only); INIS.

In order to study the effects of ^{60} Co gamma radiation on crystalline proteins an in vitro system was set up. For that, aqueous solutions from bovine crystalline were used irradiated with 0, 5.000, 10.000, 15.000, 20.000 and 25.000 Gy. The treatment led to protein alterations determined by different methods. By turbidimetry the formation of aggregates that increased with the radiation dose was revealed. The same observation was done from viscosity data and from the UV spectrum of the samples. From amino acid analysis and fluorimetry determinations, tryptophan appeared as the most sensitive amino acid. An increase in the free-S H-groups was also observed. After the standardization of the method, the radio modifier capability of glutathione, amino ethyl thiourea, mercapto ethyl alanine and dimethyl sulfoxide was tested. The results showed that in the presence of those substances the radiation effect was diminished. (author).

4338 (INIS-BR–2990) **Monitoring of the radioactive liquid effluents discharged from IPEN-CNEN/SP. Optimization of the procedures adopted.** Seki, C.R. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1990 109p. (In Portuguese). Order Number DE93607368. Source: OSTI; NTIS (US Sales Only); INIS.

The main purpose of a radioactive liquid effluents monitoring of a nuclear installation is to determine the amount of radioactivity discharged to the environment, as well as, to verify if this activity is below the authorized discharge limits established by the competent authority. Although this control has been established on a routine basis since the beginning of operation of the nuclear installations available at IPEN, the growing of such facilities in the last years has implied in an increase in the number of samples to be analyzed. The aim of this work is, therefore, to optimize the procedures adopted in the Environmental Monitoring Division of IPEN-CNEN/SP for the activity measurement of the liquid effluents discharged to the environment. Since these effluents are discharged to Pinheiros river, which presents a high dilution factor, a study is also carried out in order to verify if the activity present can be measured by the equipment available. (author).

4339 (INIS-BR–3004) **Cytogenetic studies in workers with chronic occupational radiation exposure.** Grynszpan, D. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Inst. de Biologia. 1989 139p. (In Portuguese). Order Number DE93607232. Source: OSTI; NTIS (US Sales Only); INIS.

The technique of chromosomal aberration detection on peripheral lymphocytes blood samples from monazite industry workers was used to study the cytogenetic effect of low chronic radiation doses. Cells from 51 workers and 21 controls were analysed. Cytogenetic data from individuals from different working areas were statistically compared among themselves and with the control group. The possible correlations between chromosomal aberration frequencies and cumulative external dose and working time were investigated. The influence of smoking was also tested. The link to the wives spontaneous abortions was analysed. Our results indicate possible biological effects on this sample of workers. (author).

4340 (INIS-BR–3006) **Contribution to the study of the red blood cells labelled with chromium-51 and technetium-99 m.** Canine, M.S. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1983 92p. (In Portuguese). Order Number DE93607233. Source: OSTI; NTIS (US Sales Only); INIS.

Although the bindings of Cr-51 and Tc-99 m were both in the β chain of hemoglobin molecule, the results obtained after previous incubations of the RBC with chromium and technetium, and the determinations of the efficiency of the labeling of RBC showed that the points of fixing of chromium and technetium with β chain of hemoglobin were probably different. The observations through the optic microscope allowed the verification that, at the concentration of 100 mg/ml of Cr-50, there were morphologic in the RBC. These modifications were not found after the other treatments. The comparison between scintigraphy obtained with Tc-99 m or Cr-51 RBC suggested that the technique which employs Tc-99 m can be more adequate than the one with Cr-51. (author).

4341 (INIS-BR–3008) **Brain anomalies induced by gamma irradiation in prenatal period.** Schmidt, S.L. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. [1992] 160p. (In Portuguese). Order Number DE93607262. Source: OSTI; NTIS (US Sales Only); INIS.

Gamma irradiation has been utilized in order to produce cortical and callosal abnormalities. We have also checked for the presence of the aberrant longitudinal bundle in the brains of mice born acallosal due to prenatal irradiation is also checked. Pregnant mice were exposed to gamma irradiation from a ^{60} Co source at 16, 17 and 19 days of gestational age (E 16, E 17 and E 19) with total doses of 2 Gy and 3 Gy. At 60 days postnatal the offspring of irradiated animals were intra cardiac perfused, the brains were removed from the cranio and cut into coronal or para sagittal sections. (author).

4342 (INIS-BR–3010) **DNA replication inhibition and recovery in rodents cells irradiated with ultraviolet radiation.** Paixao, J.C. da. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1986 87p. (In Portuguese). Order Number DE93607200. Source: OSTI; NTIS (US Sales Only); INIS.

The inhibition and the recovery of DNA in rodents cells irradiated with ultraviolet radiation were studied. (L.M.J.).

4343 (INIS-BR–3016) **Determination of behaviour of the corn weevil Sitophilus zeamais, Motschulsky, 1855 (Coleoptera, Curculionidae) in corn, rice and wheat grains by using radioactive tracer Iodine-131.** Pacheco, I.A. Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz. 1989 79p. (In Portuguese). Order Number DE93607263. Source: OSTI; NTIS (US Sales Only); INIS.

The dispersion behaviour and distribution pattern of Sitophilus zeamais Motschulsky, 1855 through a bulk of corn, rice and wheat,leaving from a infestation focus, was investigated by means of tracer methodology. Adults insects were labeled with the gamma emitter ^{131} I, through bath in Na ^{131} I solution and released onto the top of grain mass deposited in cylinders each 430 mm height and 195 mm in diameter, filled to 20 mm of the top with grains. The cylinders were enclosed with lids. The insects were detected through the bulk of the grain by means of a crystal scintillator, in fourteen sites, zero 3, 6, 12, 24, 48, 72, 96 and 120 hours after releasing. (author).

4344 (INIS-BR–3017) **Biological changes in Musca domestica L., 1758 (Diptera:Muscidae), induced by gamma radiation (^{60} Co).** Grecchi, M.A. Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz. 1989 189p. (In Portuguese). Order Number DE93607264. Source: OSTI; NTIS (US Sales Only); INIS.

This work was carried out in the Entomology Section of the Centre of Nuclear Energy in Agriculture (CENA), University of Sao Paulo, Piracicaba, Sao Paulo, Brazil. The objective of the present research work was to investigate some effects of gamma radiation on the various stages of M. domestica life cycle. (author).

4345 (INIS-BR–3021) **Tracing of erythrocytes in vitro with technetium-99 m: clinical applications.** Boasquevisque, E.M. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1983 135p. (In Portuguese). Order Number DE93607265. Source: OSTI; NTIS (US Sales Only); INIS.

The human beings' erythrocytes were studied in vitro by the pre tinning method, using the pyrophosphate - Stannous Chloride Kit. Investigation of factors that can alter the labeling efficiency includes tin concentration, temperature and incubation period, besides of plasma concentration and hematocrit. It was seen that tin uptake by the red blood cells (RBC) was in an exponential fashion, with a reaction constant, K = 0,03 min $^{-1}$. The reaction approaches the equilibrium about the 90 minutes. The binding of Tc-99 m in the Acidic insoluble fraction occurs in greater amounts with more concentrated tin solutions. The labeled and heated TBC were used in vivo to scintigraphic investigation. Normal subjects, splenomegaly, accessory spleen and splenic function in sickel-cell disease were studied. Circulation time of labeled RBC appears to be greater in sickel-cell anemia than in controls or splenectomized patients. Uptake was greater in kidney than lungs and liver. (author).

4346 (INIS-BR–3025) **Dose distribution and risk factors in tele cobalt therapy and intracavitary treatment with sealed sources of Ceslum-137.** Briquet, C. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1984 84p. (In Portuguese). Order Number DE93607541. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of this work is to evaluate dose to organs, outside the treatment volume. The experimental measurements were done using TLD dosemeters, placed in various regions of a Rando Alderson Phantom. The theoretical absorbed doses were calculated using the Monte Carlo method applied to a mathematical phantom. (author).

4347 (INIS-BR–3028) **Development of a postal system for dosimetry quality control performed in photon beams produced by linear accelerators of clinical use.** Di Prinzio, R. Universidade Estadual de Campinas, SP (Brazil). Inst. de Fisica. 1984 121p. (In Portuguese). Order Number DE93607369. Source: OSTI; NTIS (US Sales Only); INIS.

In this work a different system is proposed which is able to verify the absorbed depth dose given at two different depths, the irradiation field homogeneity and its coincidence with the light field of the machine, the source to surface distance used and the beam nominal energy. These radiation field parameters are very important in the tumour treatment and they may help in the determination of the error sources of the absorbed depth dose. The system developed uses a water phantom, LiF thermoluminescent dosemeters and a radiographic film to evaluate such parameters. The postal system developed in this work has been tested in linear accelerators of 4 to 18 MV with good results. (author).

4348 (INIS-BR–3032) **X-rays effect on the proximal tubes of mice kidney (Mus musculus). Ultra-structural study.** Pacheco, I.P. Escola Paulista de Medicina, Sao Paulo, SP (Brazil). 1973 71p. (In Portuguese). Order Number DE93607214. Source: OSTI; NTIS (US Sales Only); INIS.

The kidney alterations in mice it was submitted to total irradiation was studied, trying to determine which lesions were produced and in which sequence its occur. Knowing that irradiation, since in low doses, decrease the organism survival, since anticipating the normal aging, and how it occur and, in event of it occur if such alterations are qualitative and/or quantitatively related with that occur in aging. (L.M.J.).

4349 (INIS-BR–3043) **Study with radio aerosol of DTPA technetium-99 m in individuals with pulmonary disease by amiodarone.** Terra Filho, M. Sao Paulo Univ., SP (Brazil). Faculdade de Medicina. 1989 84p. (In Portuguese). Order Number DE93607234. Source: OSTI; NTIS (US Sales Only); INIS.

In order to evaluate the role of the clearance of 99 m Technetium chelated to diethylenetriamine-penta-acetate (99 m Tc-DTPA) in amiodarone induced pulmonary disease, 40 individuals were studied in four groups. After spirometry, where a volume-time curve was registered, all individuals inhaled 740 MBq of 99 m Tc-DTPA diluted in 4 ml of saline, for five minutes. Pulmonary images were obtained in a computerized scintillation camera and 9 regions of interest were selected. (author).

4350 (INIS-BR–3044) **Pre-operative radiotherapy treatment in uterine cervix voluminous carcinoma clinic phase IB.** Petitto, J.V. Sao Paulo Univ., SP (Brazil). Faculdade de Medicina. 1989 75p. (In Portuguese). Order Number DE93607235. Source: OSTI; NTIS (US Sales Only); INIS.

Forty four patients with voluminous tumor of the uterine cervix were selected and submitted to preoperative radiation with radical dosages in pelvis and to radiation therapy alone. Results as to survival in both of the treatments were similar. Complication rates in both of the treatments were not higher than the acceptable levels. Hospitalization periods were not longer than the usual for Wertheim-Meigs surgery. (author).

4351 (INIS-BR–3047) **Induced sterility through the Ionizing radiation of cobalt 60 in bookworm Plodia interpunctella (Huebner, 1813) (Lepidoptera - pyralidae) in artificial diet.** Barbieri, M.L. Sao Paulo Univ., Ribeirao Preto, SP (Brazil). Faculdade de Filosofia, Ciencias e Letras. 1989 73p. (In Portuguese). Order Number DE93607215. Source: OSTI; NTIS (US Sales Only); INIS.

The steriling doses for different phases of evolutive cycle of Plodia interpunctella (Huebner, 1813) (Lepidoptera - Pyralidae) worm using gamma radiation is studied. (author).

4352 (INIS-BR–3050) **Analysis of the numbers of B, T and subpopulation lymphocytes in patients with breast cancer submitted to a different radiotherapy schedules.** Andrade, J.M. de. Sao Paulo Univ., Ribeirao Preto, SP (Brazil). Faculdade de Medicina. 1989 88p. (In Portuguese). Order Number DE93607218. Source: OSTI; NTIS (US Sales Only); INIS.

The behaviour of T and B lymphocytes subpopulations was evaluated in patients with breast cancer submitted to 3 different schedules of radiotherapy. The assays were carried out before and immediately after the end of treatment. T lymphocytes and the helper/inducer (CD_4) and suppressor/cytotoxic (CD_8) subpopulations were counted by indirect immunofluorescence with monoclonal antibodies of the OKT series. The number of B lymphocytes was obtained by direct immunofluorescence with fluorescein-conjugated anti-human Ig antibodies. The patients were divided into 3 groups: irradiation of the breast only; irradiation of the lymph-draining areas; irradiation of the breast, of the lymph-draining area and of the sternal area. (author).

4353 (INIS-BR–3052) **Study of the behaviour of the yellow cake dissolution in simulated lung fluid.** Souza Mansur, E. de. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1988 92p. (In Portuguese). Order Number DE93606611. Source: OSTI; NTIS (US Sales Only); INIS.

An in vitro study was performed to determine the solubility of the yellow cake produced in a Brazilian uranium mill to permit classification of the inhaled material and to aid bioassay interpretation. The powder was taken from 6 different lots of yellow cake produced during 10 weeks mill operation period. Dissolution fractions and half-times were obtained using simulated lung fluid in a shaker bath at 37^0 C for 30 days. Uranium concentration were determined by neutron activation analysis. (author).

4354 (INIS-BR–3057) **Contribution to the safety of repairing mechanisms in Staphylococcus epidermidis: characterization of mutants sensible to ultraviolet radiation.** Rocha Guillobel, H.C. da. Universidade Federal, Rio de Janeiro, RJ (Brazil). Inst. de Biofisica. 1985 81p. (In Portuguese). Order Number DE93607207. Source: OSTI; NTIS (US Sales Only); INIS.

Mutants obtained from N - methyl -N' - nitro - N - nitrosoguanidine (MNNG) treatment of the W_5 strain or Staphylococcus epidermidis and selected for their increased UV - sensitivity were characterized according to their capacity to repair DNA damage. The original W_5 parental strain as well as several phenotypically defined strains of Escherichia coli, described in the literature, were used as a reference. The study included: the verification of cellular UVV - and MNNG - sensitivities; the determination of the bacterial potential for phage-reactivation by constitutive enzymatic mechanisms (host cell reactivation), as well as by the action of inducible repair systems (W-reactivation); the assessment of the UV-inductibility of prophage in the lysogenic hosts. (author).

4355 (INIS-GB–451) **Corporate plan 1992/93 to 1996/97.** National Radiological Protection Board, Chilton (United Kingdom). Apr 1992 40p. Order Number DE93607350. Source: OSTI; NTIS (US Sales Only); INIS.

The NRPB Corporate Plan for 1992/93 to 1996/97 is presented. The programme areas include international standards and policy, national standards and policy, dosimetry of radionuclides, physical dosimetry, evaluation of radiation risks, environmental studies, assessment of controlled releases, accident assessment and emergency planning, exposure of the population, occupational exposure to ionising radiations, non-ionising radiations, technical services to radiation users, radiation protection advisory service, training and central technical services. (UK).

The geological formations in the saxoinian-thuringian low mountain range contain rocks with a relatively high share of uranium (^{238}U) and its follow-up product radium (^{226}Ra). Independent of mining this results in increased radiation levels to which the local population has always been exposed. Natural radiation levels may, of course, vary strongly from one location to the next and therefore human exposure varies accordingly. (orig.).

4359 (IPEN-DT–2) **Black beams (Phaseolus vulgaris) diets' effects heating in different ways and times with or without methionine addition, in growth, liver and mice thyroid, using oleic acid ^{125} I.** Pereira, N.P.S. de. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). Dec 1979. 66p. (In Portuguese). Order Number DE93607266. Source: OSTI; NTIS (US Sales Only); INIS.

Weanling rats were divided into 13 groups of six animals and were fed 'ad libitum' for four weeks with diets containing casein as protein source for the control group and bean cooked in an autoclave at 120^0 C for 30, 45 and 60 minutes or cooked in an ordinary pot for 60, 120 and 180 minutes, with and without addition of methionine. Oleic acid ^{125} I, mixed with other nutrients, was added to the diets in order to study the distribution of radioactivity in the animal body and its excretion. The influence of heating the beans by different ways and times, with and without addition of methionine, on the growth of the animals was verified by means of the gain in weight, food efficiency ratio (FER) and protein efficiency ratio (PER). Studies in animal feces, urine and carcass were carried out. The quantity of lipids in the feces and carcass was determined. The influence of the diets on the liver and thyroid was verified by means of their weights and the quantity of radioactivity in these organs. (author).

4360 (Juel–2610) **Measuring program of the Federal Republic of Germany. Results of the whole-body counting in Russia during the period of June 17 to October 4, 1991.** Hille, P.; Hille, R. Forschungszentrum Juelich GmbH (Germany). Abt. Sicherheit und Strahlenschutz. Apr 1992. 135p. (In German). Order Number DE93728908. Source: OSTI; NTIS (US Sales Only); INIS.

The body content of radionuclides of close to 160.000 persons in the RSFSR has been examined during summer 1991. An area of approximately 10000 km^2 extending from close-to-Moskow Tula up to Slynka at the Byelorussian border and such including regions of low and high contamination levels in the districts of Briansk, Kaluga, Arel and Tula has been covered in the survey. Up to 7 mobile whole-body counting laboratories have been operational with a total number of 20 counters. More than 100 german specialists have participated in the task group. Each person examined received an official certificate given the activity of the Cs 137/134 mixture in the body and a judgement on the radiation risk involved. Observed activity levels were generally much less and in no case higher than the annual limit of intake acceptable for professional radiation workers. Only for less than 1% of the people examined the results suggest the necessity of a further surveillance by health physicists and physicians similar to the regular medical examination professional radiation workers undergo. (orig.).

4361 (NUREG/CR–5512-Vol.1) **Residual radioactive contamination from decommissioning: Technical basis for translating contamination levels to annual total effective dose equivalent: Final report: Volume 1.** Kennedy, W.E. Jr. (Pacific Northwest Lab., Richland, WA (United States)); Strenge, D.L. Nuclear Regulatory Commission, Washington, DC (United States).

Div. of Regulatory Applications; Pacific Northwest Lab., Richland, WA (United States). Oct 1992. 356p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). DOE Contract AC06-76RL01830. (PNL–7994-Vol.1). Source: OSTI; NTIS; INIS; GPO.

This document is the first volume of a three-volume report to provide generic and site-specific estimates of radiation dose for exposures to residual radioactive contamination after the decommissioning of facilities licensed by the US Nuclear Regulatory Commission (NRC). Details are provided of the generic scenario and pathway modeling analysis. Included are descriptions of the scenarios, models, mathematical formulations, assumptions, and justifications of parameter selections. Volume 1 was produced after consideration of public comments received on the January 1990 review draft. The generic modeling addresses residual radioactive contamination inside buildings and in soils. For buildings, two scenarios are presented to relate volume and surface contamination levels to estimates of the annual total effective dose equivalent (TEDE) or the TEDE (as defined in 10 CFR 20) received during a year of exposure with the conditions defined in the scenarios. Because of concerns regarding potential ground-water contamination from residual radioactive contamination in soil, a generic to permit evaluation of the annual TEDE for drinking water from wells. The generic water-use model was also used in the evaluation of multiple pathways associated with contaminated soil. The generic treatment of potentially complex ground-water systems used here provides a conservative analysis that may only indicate that additional site data and more sophisticated modeling are warranted. The scenarios, models, mathematical formulations, and selected parameter values are intended to serve as the technical basis for the NRCs derivation of screening values supporting its development of policy applied to residual radioactive contamination from decommissioning.

4362 (ORNL/TM–12255) **Marrow cell kinetics model: Equivalent prompt dose approximations for two special cases.** Morris, M.D.; Jones, T.D. Oak Ridge National Lab., TN (United States). Nov 1992. 20p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93003264. Source: OSTI; NTIS; GPO Dep.

Two simple algebraic expressions are described for approximating the "equivalent prompt dose" as defined in the model of Jones et al. (1991). These approximations apply to two specific radiation exposure patterns: (1) a pulsed dose immediately followed by a protracted exposure at relatively low, constant dose rate and (2) an exponentially decreasing exposure field.

4363 (PNL–8360) **Scoping assessment of radiological doses to aquatic organisms and wildlife – N Springs.** Poston, T.M.; Soldat, J.K. Pacific Northwest Lab., Richland, WA (United States). Oct 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93003286. Source: OSTI; NTIS; INIS; GPO Dep.

Estimated does rates were determined for endemic biota inhabiting the N Springs area based primarily on spring water data collected from the first 6 months of 1991. Radiological dose estimates were computed from measured values of specific radionuclides and modeled levels of radionuclides using established computer codes. The highest doses were predicted in hypothetical populations of clams, fish-eating ducks, and rabbits. The calculated dose estimates did not exceed 1 rad/d, an administrative dose rate established by the US Department of Energy for the protection of native aquatic biota. An administrative dose rate has not been established for terrestrial wildlife.

4364 (PNWD–2020-HEDR) **Integrated Task Plans for the Hanford Environmental Dose Reconstruction Project, FY 1992 through May 1994.** Shipler, D.B. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 242p. Sponsored by USDOE, Washington, DC (United States); Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93001345. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of the Hanford Environmental Dose Reconstruction (HEDR) Project is to estimate radiation doses from Hanford Site operations since 1944 to populations and individuals. The primary objective of work to be performed through May 1994 is to (1) determine the project's appropriate scope (space, time, radionuclides, pathways and individuals/population groups), (2) determine the project's appropriate level of accuracy (level of uncertainty in dose estimates) for the project, (3) complete model and data development, and (4) estimate doses for the Hanford Thyroid Disease Study (HTDS), representative individuals, and special populations as described herein. The plan for FY 1992 through May 1994 has been prepared based on activities and budgets approved by the Technical Steering Panel (TSP) at its meetings on August 19–20, 1991, and April 23–25, 1992. The activities can be divided into four broad categories: (1) model and data evaluation activities, (2)additional dose estimates, (3) model and data development activities, and (4)technical and communication support.

4365 (PNWD–2021-HEDR) **Project Management Plan for the Hanford Environmental Dose Reconstruction Project.** Shipler, D.B.; McMakin, A.H.; Finch, S.M. Battelle Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 62p. Sponsored by Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93001494. Source: OSTI; NTIS; GPO Dep.

This Project Management Plan (PMP) describes the approach being used to manage the Hanford Environmental Dose Reconstruction (HEDR) Project. The plan describes the management structure and the technical and administrative control systems used to plan and control HEDR Project performance. The plan also describes the relationship among key project participants: Battelle, the Centers for Disease control (CDC), and the Technical Steering Panel (TSP). Battelle's contract with CDC only extends through May 1994 when the key technical work will be completed. Therefore, this plan is focused only on the period during which Battelle is a participant.

4366 (PNWD–2022-HEDR) **Commercial production and distribution of fresh fruits and vegetables: A scoping study on the importance of produce pathways to dose: Hanford Environmental Dose Reconstruction Project.** Marsh, T.L.; Anderson, D.M.; Farris, W.T.; Ikenberry, T.A.; Napier, B.A.; Wilfert, G.L. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 87p. Sponsored by Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Contract 200-92-0503(CDC)/18620(BNW). Order Number DE93001493. Source: OSTI; NTIS; GPO Dep.

This letter report summarizes a scoping study that examined the potential importance of fresh fruit and vegetable pathways to dose. A simple production index was constructed with data collected from the Washington State Department of Agriculture (WSDA), the United States Bureau of the Census, and the United States Department of Agriculture (USDA). Hanford Environmental Dose Reconstruction (HEDR) Project staff from Battelle, Pacific Northwest Laboratories, in cooperation with members of the Technical Steering Panel (TSP), selected lettuce and spinach as the produce pathways most likely to impact dose. County agricultural reports published in 1956 provided historical descriptions of the predominant distribution patterns of fresh lettuce and spinach from production regions to local population centers. Pathway rankings and screening dose estimates were calculated for specific populations living in selected locations within the HEDR study area.

4367 (PNWD–2023-HEDR) **Parameters used in the environmental pathways (DESCARTES) and radiological dose (CIDER) modules of the Hanford Environmental Dose Reconstruction Integrated Codes (HEDRIC) for the air pathway: Hanford Environmental Dose Reconstruction Project.** Snyder, S.F.; Farris, W.T.; Napier, B.A.; Ikenberry, T.A.; Gilbert, R.O. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 155p. Sponsored by USDOE, Washington, DC (United States); Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Contract 200-92-0503(CDC)/18620(BNW). Order Number DE93000840. Source: OSTI; NTIS; INIS; GPO Dep.

This letter report is a description of work performed for the Hanford Environmental Dose Reconstruction (HEDR) Project. The HEDR Project was established to estimate the radiation doses to

individuals resulting from releases of radionuclides from the Hanford Site since 1944. This work is being done by staff at Battelle, Pacific Northwest Laboratories (Battelle) under a contract with the Centers for Disease Control (CDC) with technical direction provided by an independent Technical Steering Panel (TSP). The objective of this report is to-document the environmental accumulation and dose-assessment parameters that will be used to estimate the impacts of past Hanford Site airborne releases. During 1993, dose estimates made by staff at Battelle will be used by the Fred Hutchinson Cancer Research Center as part of the Hanford Thyroid Disease Study (HTDS). This document contains information on parameters that are specific to the airborne release of the radionuclide iodine-131. Future versions of this document will include parameter information pertinent to other pathways and radionuclides.

4368 (PNWD–2024-HEDR) **Declassifications requested by the Technical Steering Panel of Hanford documents produced 1944–1960: Hanford Environmental Dose Reconstruction Project.** Gydesen, S.P. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 217p. Sponsored by USDOE, Washington, DC (United States); Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93001492. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this letter report is to list the actions taken on historical documents that the Technical Steering Panel (TSP) and/or the public identified as being of potential use to the Hanford Environmental Dose Reconstruction (HEDR) Project. The documents addressed herein were generated from 1944 through 1960 at the Hanford Site and were still listed as classified documents in 1990. This report lists the 1429 documents and their classification status. All TSP- and/or public-requested declassifications of Hanford historical documents generated from 1944–1960 have been completed. Of the 1429 documents, 1103 were declassified. (492 as a result of TSP/public requests, 506 previously declassified, 105 declassified for other programs). The remaining 326 documents were not declassified because either they were determined by the TSP to be not applicable to the HEDR Project or because of the reasons given in the appendixes. Of the 1103 declassified documents, 506 have not been reviewed by the TSP for their pertinence to the HEDR Project. Figure I provides an overview of the declassification process.

4369 (PNWD–2033-HEDR-Vol.1) **Iodine-131 releases from the Hanford Site, 1944–1947: Volume 1, Text: Hanford Environmental Dose Reconstruction Project.** Heeb, C.M. Battelle Pacific Northwest Lab., Richland, WA (United States). Oct 1992. 111p. Sponsored by Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Contract 200-92-0503 (CDC)/18620 (BNW). Order Number DE93002040. Source: OSTI; NTIS; GPO Dep.

Releases of fission product iodine-131 from separation plants at the Hanford reservation are calculated for the 1944 through 1947 period. Releases to the atmosphere were from the ventilation stacks of T and B separation plants. A reconstruction of daily separation plant operations forms the basis of the releases. The reconstruction traces the iodine-131 content of each fuel discharge from the B, D, and F Reactors to the dissolving step in the separation plants. Statistical computer modeling techniques are used to estimate hourly release histories based on sampling mathematical distribution functions that express the uncertainties in the source data and timing. The reported daily, monthly, and yearly estimates are averages and uncertainty ranges are based on 100 independent Monte Carlo "realizations" of the hourly release histories.

4370 (PNWD–2033-HEDR-Vol.2) **Iodine-131 releases from the Hanford Site, 1944–1947: Volume 2, Data: Hanford Environmental Dose Reconstruction Project.** Heeb, C.M. Battelle Pacific Northwest Lab., Richland, WA (United States). Oct 1992. 229p. Sponsored by Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Contract 200-92-0503 (CDC)/18620 (BNW). Order Number DE93002041. Source: OSTI; NTIS; INIS; GPO Dep.

Detailed results of the Hanford Environmental Dose Reconstruction (HEDR) iodine-131 release reconstruction are presented in this volume. Included are daily data on B, D, and F Plant, reactor operations from the P-Department Daily Reports (General Electric Company 1947). Tables of B and T Plant material processed from the three principal sources on separations plant operations: The Jaech report (Jaech undated), the 200 Area Report (Acken and Bird 1945; Bird and Donihee 1945), and the Metal History Reports (General Electric Company 1946). A transcription of the Jaech report is also provided because it is computer-generated and is not readily readable in its original format. The iodine-131 release data are from the STRM model. Cut-by-cut release estimates are provided, along with daily, monthly, and yearly summations. These summations are based on the hourly release estimates. The hourly data are contained in a 28 megabyte electronic file. Interested individuals may request a copy.

4371 (STUK-A–100) **Biological effects of radiation: The induction of malignant transformation and programmed cell death.** Servomaa, K. Finnish Centre for Radiation and Nuclear Safety (STUK), Helsinki (Finland). Apr 1991. 132p. Order Number DE93607201. Source: OSTI; NTIS; INIS.

The thesis includes also seven previously published articles.

In the Chernobyl explosions and fire, powderized nuclear fuel was released from the reactor core, causing an unexpected fallout. X-ray analysis and scanning electron microscopy showed that the isolated single particles were essentially pure uranium. These uranium aerosols contained all of the nonvolatile fission products, including the b-emitters, ^{95}Zr, ^{103}Ru, ^{106}Ru, ^{141}Ce, and ^{144}Ce. The hot particles are extremely effective in inducing malignant transformation in mouse fibroblast cells in vitro. The major factor responsible for this effect is focus promotion caused by a wound-mediated permanent increase in cell proliferation (mitogenesis associated with mutagenesis). Transformed foci were analysed for the activation of c-abl, c-erb-A, c-erb-B, c-fms, c-fos, c-myb, c-myc, c-Ha-ras, c-Ki-ras, c-sis, and c-raf oncogenes at the transcriptional level. The pattern of oncogene activation was found to vary from focus to focus. Long interspersed repeated DNA (L1 or LINE) makes up a class of mobile genetic elements which can amplify in the cell genome by retroposition. This element is spontaneously transcriptionally activated at a critical population density and later amplified in rat chloroleukaemia cells. UV light and ionizing radiation induce this activation prematurely, and the activation is followed by programmed cell death (apoptosis) in a sequence of events identical to that seen in LIRn activation occurring spontaneously.

4372 (WSRC-MS–92-349) **Deer monitoring at the Savannah River Site.** Fledderman, P.D. Westinghouse Savannah River Co., Aiken, SC (United States). [1992]. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. (CONF-930130–1: 26. Health Physics Society midyear topical meeting on environmental health physics, Coeur d'Alene, ID (United States), 24-28 Jan 1993). Order Number DE93000705. Source: OSTI; NTIS; INIS; GPO Dep.

To protect public health, all deer and feral hogs harvested at the Savannah River Site (SRS) during controlled hunts are monitored for Cs-137. A new monitoring program has been developed by the Environmental Monitoring Section (EMS). To provide increased confidence in dose data and compliance with regulations, many changes have been made to the deer and hog monitoring program. Using field count information, a computerized database determines Cs-137 concentration and calculates the committed effective dose equivalent (CEDE) resulting from consumption of the animal. The database then updates each hunter's cumulative CEDE in real time. Also, enhancements to the instrument calibration and quality control portions of the monitoring program were implemented. These include improved monitor calibration, intercomparison of field results from the same animal using different detectors, and regular use of check sources to verify equipment performance. With these program changes, EMS can produce more accurate and verifiable dose data.

4373 (CONF-910550–, pp. 273-281) **Influence of ammonium chloride on growth and fatty acid production by Spirulina platensis.** Manabe, E. (Advanced Technology Research Lab., Osaku (Japan)); Hirano, M.; Takano, H.; Ishikawadoi, N.; Sode, K.; Matsunaga, T. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Changes in growth and fatty acid content of Spirulina platensis were examined after transferring cells into media containing various concentrations of ammonium chloride. Photosynthetic 0_2 evolution rate decreased with increasing ammonium chloride concentration. Therefore, the algal growth was interrupted by ammonium chloride addition. On the other hand, total fatty acid content markedly increased after addition of ammonium chloride to a concentration of 15-50 mM and was maximized 40-48 h after addition of 25 mM ammonium chloride. The increases in palmitic and oleic acid content were especially remarkable. However, this began to decrease 48 h after the addition of 25 mM of ammonium chloride. Also, y-linolenic acid content increased continuously during a 72-h incubation. As a result, Spirulina platensis cells containing about 2% y-linolenic acid were obtained by ammonium chloride treatment, representing an increase of 1.5-2-fold compared to untreated cells.

Studies were conducted to determine the effect of hydrogen sulfide (H_2S) on the growth and metabolism of Butyribacterium methylotrophicum and Clostridium acetobutylicum during batch culture. Hydrogen sulfide concentrations in the range of those present in typical synthesis gas mixtures were examined. Growth rates and product compositions were unaffected by total liquid-phase sulfide concentrations ranging from 0.0 to 2.0 mmol/L for B. methylotrophicum and 0.0 to 0.9 mmol/L for C. acetobutylicum. An analysis of the effect of H_2S equilibrium partitioning, media pH, and gas-liquid equilibration rates on this system is presented.

4375 (CONF-910550–, pp. 377-382) **Bioleaching of low-grade copper ores using Thiobacillus ferrooxidans.** Hazra, T.K. (Univ. of College of Science, Calcutta (India)); Mukherjea, M.; Mukherjea, R.N. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Microbial leaching of copper ores using T. ferrooxidans is becoming increasingly important, and it is estimated to account for more than 10% of copper output throughout the world. However, although extensive studies are reported on bioleaching of metal sulfides using T. ferrooxidans, there is still limited understanding about the exact mechanism of the electron transfer process involved. T. ferrooxidans, a gram-negative chemolithotropic bacterium, uses Fe^{2+} as the sole source of energy and assimilates CO_2 at the expense of energy derived from oxidative phosphorylation. Electron transport chain components involved in the oxidation of Fe^{2+} reportedly include rusticyanin and several cytochromes of a and c types. Rusticyanin is a soluble type 1 blue copper protein present in the periplasmic space of the bacterium, consisting of a single polypeptide chain with one copper atom as a cofactor. It has a mol wt of 16,300 Da and has an absorption maxima at 597. Diethyl dithiocarbamate [DEDC] reportedly shows antimicrobial activity against some organisms, such as E. coli, Klebsiella pneumoniae, Proteus vulgaris, Salmonella, Serratia, Candida and so on. Since its action on T. ferrooxidans has not been observed so far, DEDC has been used in the present study as a tool for understanding the electron transfer mechanism involving rusticyanin in the bioleaching process.

4376 (CONF-910550–, pp. 449-458) **CO_2 removal by high-density culture of a marine cyanobacterium Synechococcus sp. using an improved photobioreactor employing light-diffusing optical fibers.** Takeyama, H. (Tokyo Univ. of Agriculture and Technology, Tokyo (Japan)); Nakamura, N.; Sode, K.; Burgess, J.G.; Matsunaga, T.; Takano, H.; Manabe, E.; Hirano, M. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

A light diffusing optical fiber (LDOF) photobioreactor with an improved gas input system has been used for the high-density culture of a marine cyanobacterium Synechococcus sp. optimum conditions for CO_2 removal and biomass production were investigated. Maximum CO_2 removal of 4.44 g/L/d was achieved using an initial cell concentration of 6.8 g/L. The biomass yield was 0.97 g/L for a 12-culture time. Continuous cultures, in which medium was filtered using a ceramic membrane module, showed enhanced growth, with a final cell concentration of 11.2 g/L. These results demonstrate the potential of LDOF photobioreactor units for CO_2 removal and biomass production using marine cyanobacteria.

4377 (CONF-910550–, pp. 671-680) **Henry's law constant for environmentally significant compounds.** Moore, R.C. (Univ. of Tennessee, Knoxville (United States)); Bienkowski, P.R. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Many nonvolatile organic compounds, e.g., polyaromatic hydrocarbons (PAHs), are readily stripped during aerobic biodegradation. This is because of the high infinite dilution activity coefficient resulting from forces generated by the water-organic interactions at the molecular level. Several models have been proposed for air-stripping based on the Henry's law constant. By definition, the Henry's law constant is the infinite dilution activity coefficient multiplied by the pure component vapor pressure. In this article, a gas saturation technique was used to measure the very low vapor pressures exhibited by these nonvolatile compounds. Literature values of other PAHs have been tabulated and are presented. For determining infinite dilution activity coefficients, a differential ebulliometery apparatus has been constructed. In this technique, the boiling point difference between pure water and a water-organic solution is measured very precisely. Thermodynamics is then used to calculate the infinite dilution activity coefficient. The method's accuracy has been tested using the phenol- water system.

4378 (CONF-910550–, pp. 693-707) **Tributyl phosphate degradation by immobilized cell of a Citrobacter sp.** Owen, S. (Univ. of Oxford (United Kingdom)); Jeong, B.C.; Poole, P.S.; Macaskie, L.E. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Tributyl phosphate (TBP), a plasticizer and solvent, is used in nuclear fuel reprocessing, generating TBP wastes laden with residual uranium. A Citrobacter sp. accumulated heavy metals via a phosphohydrolase(s) that precipitated metals with inorganic phosphate liberated from an organic phosphate 'donor' molecule (TBP). Mutant analysis suggested that TBP hydrolysis was not attributable

to a previously documented acid phosphatase (monoesterase). Purified monoesterase had little activity against phospho di- and triesters, had no requirement for Mg^{2+} or Mn^{2+}, and was EDTA-resistant. Conversely, TBP cleavage by immobilized cells was enhanced by Mg^{2+}, and in-inhibited by Mn^{2+} and EDTA. A separate phosphotri/diesterase was implicated.

4379 (CONF-910550–, pp. 811-817) **Microbial stabilization of active-sulfide sludges.** Sublette, K.L. (Univ. of Tulsa, OK (United States)). National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

In the petroleum industry, crude oil is often stored with water in water displacement tanks. In these tanks, both aerobic oil-oxidizing bacteria (OOB) and anaerobic sulfate-reducing bacteria (SRB) exist in the oil/water system (1,2). The SRB utilize sulfate as a terminal electron acceptor with reduction to sulfide. The OOB create anaerobic conditions in these oil/water systems by removal of oxygen and produce organic acids that may act as substrates for the SRB. Therefore, the SRB begin to produce sulfide under anaerobic conditions. Sulfides produced by the SRB result in corrosion in steel tanks producing a variety of iron-sulfur compounds. Those compounds with iron:sulfide ratios of 1:2 (pyrite and marcasite) are pH and temperature stable. However, compounds with iron:sulfide ratios of 1:1 (mackinawite and pyrrhotite) and 3:4 (greigite and smythite) are soluble in mild acid with formation of H_2S. This article describes a preliminary investigation of the anaerobic oxidation of active-sulfide sludges by the chemoautotroph and facultative anaerobe Thiobacillus denitrificans. T. denitrificans utilizes reduced sulfur compounds as energy sources with oxidation to sulfate. Under anaerobic conditions, nitrate may be used as a terminal electron acceptor with reduction to elemental nitrogen. Sublette and Sylvester have demonstrated that T. denitrificans may be readily cultured aerobically and anaerobically in batch and continuous reactors on gaseous H_2S under sulfide-limiting conditions. A microbial process for the removal of H_2S from a gas has been proposed based on contact of the gas with a culture of T. denitrificans. Immobilized T. denitrificans has also been used to remove and oxidize sulfides in sour water containing H_2S, HS and/or S^{-2} in an upflow bubble column. These reactors have successfully operated continuously for up to 9 mo.

4380 (CONF-910550–, pp. 819-826) **Chemical interaction of flue gas components with the growth of Cyanidium caldarium.** Woodward, C.A. (Oak Ridge National Lab., TN (United States)); MacInnis, J.M.; Lewis, S.N.; Greenbaum, E. National Renewable Energy Lab., Golden, CO (United States); Oak Ridge National Lab., TN (United States). 1992. From 13. symposium on biotechnology for fuels and chemicals; Colorado Springs, CO (United States); 6-10 May 1991. In *Thirteenth symposium on biotechnology for fuels and chemicals: Proceedings.* 846p. Source: The Humana Press, Inc., Totowa, NJ 07511 (United States).

Flue gas released into the atmosphere from fossil fuel combustion contains carbon dioxide, a major contributor to possible global warming and the greenhouse effect. Photosynthetic processes result in the reduction of CO_2 to carbohydrate and the evolution of molecular oxygen from water. A photosynthetic organism growing in a process off-gas stream could effectively recycle CO_2 to nonpolluting products, especially if it could survive the high acid, sulfur dioxide, and low O_2 concentrations that are also present in flue gas. Cyanidium caldarium, a microalga isolated from acid sulfur hot springs in Yellowstone National Park, has been shown to be tolerant of such extreme conditions (1). It is thermophilic and acidophilic, and grows in 1M sulfuric acid at 70C, as well as anaerobically in high concentrations Of CO_2 (2). It is therefore a suitable candidate for the study of stress-tolerant algal CO_2 reduction in stack gas atmospheres. The purpose of the present work was to determine the conditions under which Cyanidium would grow and to measure the rate of its photosynthetic production of oxygen in a flue gas atmosphere.

4381 (CONF-9109358–, pp. 11) **Receptor-bound toxicants as biomarkers for environmental pollutants.** Saleh, M.A. (Texas Southern University, Houston (United States)); El-Baroty, G.; Affify, A.M.; Reheim, E.A. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Lindane, toxaphene, endosulfan, endrin, ketoendrin, aldein, dieldrin, heptachlor, pyrethroids insecticides and some of their metabolites are central nervous system toxicants and they have shown to exert their effect by binding to specific sites in the gamma-aminobutyric acid (GABA) receptor-ionophore complex. Radioreceptor assay was also examined as a potential biomarker for monitoring human exposure to this group of insecticides. GABA receptor was prepared form P_2 (mitochondrial) fraction of rats and calf brain homogenate. The assay is conducted by measuring the displacement of radioactivity following incubation of the receptor with environmental samples, human bloods or other fluid. The assay was shown to be very sensitive and required very little or no sample preparation or clean up prior to the analysis.

4382 (CONF-9109358–, pp. 8) **Computer-assisted molecular modeling and prediction of the physical, chemical and biological fate of environmental pollutants.** Saleh, M.A. (Texas Southern University, Houston (United States)). USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Knowledge about the physical, chemical and biological degradation of environmental pollutants is the key to evaluating their toxicological effects and environmental fate. Laboratory identification of metabolites and studies of environmental degradation are very costly and time-consuming. Several artificial intelligence software packages capable of predicting metabolism, hazardous effect and environmental fate of environmental pollutants have recently became available. In this paper, the results of using computer-assisted modeling for the prediction of metabolism, environmental fate and hazardous effects are discussed and compared to those actually obtained form data derived by laboratory techniques for selected groups of environmental pollutants and agrochemicals.

4383 (CONF-9109358–, pp. 6) **Determining inhibition potential of wastewaters by means of a computerized respirometer and a standardized microbial culture.** Beach, M.I. (N-CON Systems Co., Larchmont, NY (United States)); Cadena, F.; Troop, L.M. USDOE, Washington, DC (United States). [1991]. From 8. international conference on chemistry for protection of the environment; Lublin (Poland); 16-18 Sep 1991. In *Chemistry for protection of the environment, Eight international conference: Proceedings.* 635p. Order Number DE92014317. Source: OSTI; NTIS; INIS.

Although many chemicals and chemical compounds can be treated by biological processes, great care must be taken to assure that discharges do not exceed the capability of the biomass in the treatment facility. Monitoring the oxygen uptake rate (OUR) of trade wastes and prompt determination of their inhibition potential can prevent costly upsets. In order to be effective, a monitoring technique should be rapid, accurate, reliable, and require minimum operator time and skill. The method described is based on several established comparative tests, but simplified by using oxygen uptake rate (OUR) data generated and interpreted by a computerized respirometer using a commercially available, standardized, broad spectrum microbial culture. The availability of a standard bacteria culture enhances the repeatability of OUR tests is essential for correlating the effects of wastes in various parts of the world.

4384 (DOE/ER/60655–T1) **Regional aerosol deposition in human upper airways: Progress report, March 1, 1992–February 28, 1993.** Swift, D.L. Johns Hopkins Univ., Baltimore, MD (United States). School of Hygiene and Public Health. Nov 1992. 5p. Sponsored by USDOE, Washington, DC (United States).

DOE Contract FG02-88ER60655. Order Number DE93003882. Source: OSTI; NTIS; GPO Dep.

Laboratory experimental studies were carried out to investigate the factors influencing the deposition of aerosols ranging in size from 1 nm to 10 μm in the human nasal, oral, pharyngeal and laryngeal airways. These experimental studies were performed in replicate upper airway physical models and in human volunteer subjects. New replicate models of the oral passage of an infant, the oral passage of an adult at two openings and the combined nasal and oral airways of an adult were constructed during the period, adding to the existing models of adult, child and infant nasal and oral airways models. Deposition studies in the adult oral and adult nasal models were performed under simulated cyclic flow conditions with 1 nm particles to compare with previously measured constant flow studies. Similar studies with inertial particles (1–10 μm diameter) were performed with the adult nasal model; in both instances, results with cyclic flow were similar to constant flow results using a simple average flow rate based on inspiratory volume and time of inspiration. Human subject studies were performed with particle sizes 5–20 nm for nasal inspiration; preliminary analysis shows good agreement with model studies at several representative flow rates. Nasal inspiratory inertial deposition of 1–4 μm diameter particles was measured in several adults as a function of airway dimensions; dimensional changes of the valve area by decongestion did not produce concomitant deposition changes.

4385 (DOE/MC/26018–93/C0111) **Toxicity studies of mild gasification products.** Ong, T.M.; Whong, W.Z.; Ma, J.; Zhong, B.Z.; Bryant, D. National Inst. for Occupational Safety and Health, Morgantown, WV (United States). [1992]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI21-89MC26018. (CONF-920951–6: US Department of Energy contractors review meeting on gasification and gas stream cleanup systems, Morgantown, WV (United States), 15-17 Sep 1992). Order Number DE93002611. Source: OSTI; NTIS; GPO Dep.

The objectives of this project are: (1) to perform mutagenicity studies with the Ames Salmonella/microsomal assay system on coal liquids produced by mild gasification from different coals and/or processing conditions, (2) to determine whether coal liquids which are mutagenic to bacteria are also genotoxic to mammalian cells, (3) to establish correlations between mutagenicity, aromaticity, and boiling point range of coal liquids, and (4) to identify the chemical classes which are likely to be responsible for the mutagenic activity of gasification products. Four of the seven samples tested so far failed to demonstrate any mutagenic activity under any conditions tested. Those samples were SHELL#830331, MG-122IBP-420°F, MG-122 420–720°F, and MG-122 720°F+. Table 1 summarizes the results from all samples tested in DMSO and Tween 80. When solvated in DMSO, MG-119 and MG-120 composite materials displayed slight, but ultimately insignificant, genotoxic activity on TA98 and TA1OO in the presence of S9. When Tween 80 was used as the solvent, MG-119 and MG-120 displayed slight, but significant, geno-toxic activity on TA98 with S9 (Figure 4). CTC#11 in DMSO displayed significant genotoxic activity on both TA98 and TA1OO with and without S9. The activity was higher on TA98 than TA100, and higher with S9 than without, primarily indicating the presence of indirect-acting frameshift mutagen. The results of the testing on CTC#11 were similar for both solvents, DMSO and Tween 80 (Table 2).

4386 (ETDE-mf–93728954) **Histological and cytological differences between needles of healthy and damaged spruces at two sites in North-Rhine Westphalia, Germany. Final report.** Forschungsberichte zum Forschungsprogramm des Landes Nordrhein-Westfalen 'Luftverunreinigungen und Waldschaeden'. Rosenkranz, J.; Ebel, B.; Stratmann, U.; Ferfort, D.; Godde, D.; Niess, C.; Weber, M. Bochum Univ. (Germany). Zellmorphologie; Ministerium fuer Umwelt, Raumordnung und Landwirtschaft des Landes Nordrhein-Westfalen, Duesseldorf (Germany). Mar 1990 179p. (In German). Order Number DE93728954. Source: OSTI; NTIS (US Sales Only).

Cytological and histological characteristics of needles of damaged Norway spruce were compared with those of healthy trees. 122 parameters such as 'extension of the intercellular space', 'shape of chloroplast envelope', or 'silicium content of endodermis' have been examined. 94 of them revealed significant differences between the damaged needles and the non-damaged ones. Some of them depend on needle age, too. It was shown that 17 of the 94 significant differences are connected by regression with ozone, sulfur dioxide, or nitrogen dioxide. Ozone affects 'shape of the wax plugs of the stomates', 'relation of parenchyma area to needle cross section of trees in the Egge Mountains related to those of trees in the Rothaar Mountains', and 'number of damaged endodermis cells'. Sulfur dioxide affects 'shape of mesophyll cytoplasm' and 'thickness of granum thylakoid membrane'. Finally, nitrogen dioxide affects 'numbers of chloroplasts containing plastoglobules', 'relation of phosphorus concentration in mesophyll cell walls of trees related to trees, and 'inflated thylakoid space'. (orig./UWA).

4387 (KFK-PEF–80-Vol.1) **7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.** Horsch, F.; Filby, W.G.; Fund, N.; Gross, S.; Hanisch, B.; Reinhardt, W.; Seidel, A. (comps.). Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. 404p. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

The research findings of Department 1a of PEF in 1990 are presented in 31 contributions, 25 of which are available as separate records in this database. The detection and analysis of airborve pollutants on forest ecosystems is described, and other possible causes of the new types of forest damage are gene into. Particular interest is taken in the soil factor. There are contributions on the effects of a multitude of abiotic environmental factors on the biodiversity of annelides, arthropodes, mycorrhizal fungi as well as on soil chemistry, the mineral substances balance, root mycorrhization, etc., and on tree germination and growth, annual ring width , photosynthesis rate and other physiological activities, biomass production, leaf constituents such as cations, aminoacid, carbohydrates, chlorophyll, etc. Methodical studies on remote mapping of forest damage and statistical evaluations of the single projects are presented as well. (UWA).

4388 (KFK-PEF–80-Vol.1, pp. 27-37) **CO_2-gas-exchange and transpiration of open grown Norway spruce during the year in higher elevations of the Southern Black Forest under local air conditions with and without O_3 respectively.** Abetz, P. (Freiburg Univ. (Germany). Inst. fuer Waldwachstum); Kuenstle, E.; Wolfart, A. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

Some parameter expressions for the year 1990 are presented including ground frost, soil humidity, tree rings, air temperature and radiation. Photoinhibition as well as higher night respiration and presumably higher light inhibition at the southern exposed twigs of the open grown Norway Spruce as compared to the northern exposed twigs were observed. The decrease in net photosynthesis at the south facing twigs was related to the heavy soil desiccation. Transpiration did decrease during the same period after an initial increase. Values for productivity were higher for the northern part of the tree as the southern part did recover slowly from summer stress. Cell division during that period was blotted out by its deswelling. Therefore, high radiation and soil desiccation during summer appear to be natural stress factors to Norway Spruce at higher elevations of the Southern Black Forest. There are no results regarding the effect of ozone on net photosynthesis and transpiration because of technical regarding the effect of ozone on net photosynthesis and transpiration because of technical problems. (orig./UWA).

4389 (KFK-PEF–80-Vol.1, pp. 39-47) **Immission measurements at Schoellkopf near Freudenstadt.** Baumbach, G. (Stuttgart Univ. (Germany). Inst. fuer Verfahrenstechnik

und Dampfkesselwesen); Baumann, K. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). Contract BMFT 0339112C. (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

Since 1985, continuous measurements of air pollutants and meteorological data are carried out by the department of air pollution control (IVD) at the PEF research site 'Schoellkopf' near Freudenstadt (840 m asl). For this site, the typical air pollution situation was characterized at the 6th annual report of PEF in 1990. The results of the preceding years are updated in this report: In 1990 maximum SO_2 concentrations were registered in November and December, however this values did not reach the levels of January 1985, February 1986 and January 1987. Such significant high SO_2 concentrations are caused basically by long-range transport from north-easterly directions (EAST-Germany and CSFR), only. The maximum ozone half-hour-mean value was measured in August, whereas the highest monthly mean appeared in May like in the years before. In addition, it is reported on the behaviour of CO_2 above the forest canopy. The vertical distribution of ozone inside the forest stand was intensively investigated, and the ozone deposition on entire spruce branches was examined by means of the plant-enclosure-technique. (orig.).

4390 (KFK-PEF–80-Vol.1, pp. 49-70) **Physiological and biochemical investigations into the yellowing of spruce at higher altitudes. Pt. 4. Stability of the light-harvesting chlorophyll-a/b-protein, pigment content, activity of the xanthophyll cycle, and the sensitizing role of chlorophyll.** Siefermann-Harms, D. (Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Genetik und Toxikologie). Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

Physiological and biochemical investigations into the yellowing of spruce at higher altitudes.- Part IV: Stability of the light-harvesting chlorophyll-a/b-protein, pigment content, activity of the xanthophyll cycle, and the sensitizing role of chlorophyll. (1) In 1990, the investigations into pigment content of the needles and stability of the light-harvesting chlorophyll-a/b-protein (LHC) have been continued for slightly yellowing spruce trees (dammage class 0) of the PEF research site at Freudenstadt. The data support our earlier results. (2) The xanthophyll cycle was examined for spruce . The dark reactions of the cycle were inhibited for both, damaged spruce from Freudenstadt, and spruce from Essen-Kettwig exposed to 'clean-air conditions' but not for spruce exposed to 'industrial area conditions'. For Freudenstadt spruce, destabilization of the LHC occurred before the xanthophyll cycle was inhibited. (3) Experiments with a strongly chlorotic spruce at the Freudenstadt site showed that the red portion of sunlight (wavelengths > 600 nm) induces or inhibits the yellowing process, depending on photon flux density. Light-induced yellowing of damaged spruce appears to be sensitized by the excited chlorophyll molecule. (orig./UWA).

4391 (KFK-PEF–80-Vol.1, pp. 71-80) **Intermediates of carbohydrates and energy metabolism in spruce needles in relation to season and decline symptoms.** Einig, W. (Tuebingen Univ. (Germany). Physiologische Oekologie der Pflanzen); Egger, B.; Hampp, R. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

We analyzed annual changes of pool sizes of metabolites in three different age classes of needles of 8 about 40-year-old spruce trees with different symptoms of decline (Freudenstadt, Black Forest). Needle development and maturation was accompanied by decreasing ratios of ATP/ADP, fructose/glucose, and levels of fructose 2,6-bisphosphate (indicates increased rates of glycolysis) in the beginning of the vegetation period. This can be taken as evidence for increased rates of senescence in mature tissues. In addition, these needles tended to retain starch in November which suggests an impaired export capacity (sucrose levels wre not affected). This assumption is supported by the detection of structural defects in bundle cells. (orig.).

4392 (KFK-PEF–80-Vol.1, pp. 93-107) **Physiological and cytomorphological investigations of undamaged and damaged spruce in the Northern Black Forest.** Wild, A. (Mainz Univ. (Germany). Inst. fuer Allgemeine Botanik); Tietz, S. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

In damaged spruce the functional and structural status of thylakoid membranes seems to be affected. That is shown by a reduced content of chlorophyll as well as by reduced components of the thylakoid membrane (P-700, Cyt f, Cyt $b_5$63, Cyt $b_5$59, Q_B-protein). There is also a decrease of the electron transport rate. In contrast to that the antioxidative systems and some phenolic components are increased in damaged spruce. Ascorbate seems to play an important role to eliminate reactive oxygen species. An increase in PEPC activity and in the content of putrescine in damaged spruce indicate a considerable damage. The rise in dead cells in healthy needles of damaged spruce trees shows strong cell damage reactions. These physiological and biochemical findings in needles of damaged spruce are typical for the status of damaged reactions. These physiological and biochemical findings in needles of damaged spruce are typical for the status of damaged spruce with the signs of 'montane Vergilbung'. (orig.UWA).

4393 (KFK-PEF–80-Vol.1, pp. 109-119) **Genetic structures of forest trees with different levels of damage on permanent observation plots on forest decline in Baden-Wuerttemberg.** Konnert, M. Genetic structures of forest trees with different levels of damage on permanent observation plots on forest decline in Baden-Wuerttemberg. The genetic structures of 961 damged silver fir trees (Abies alba Mill.) growing on 27 observation plots on forest decline in Baden- Wuerttemberg were studied by isozyme analysis. Four of nine loci studied were monomorphic in all populations. The different allele frequencies for five polymorphic loci indicate considerable amounts of genetic variation between the stands. There was no statistical evidence of linkage between average needle loss and genetic structures. Differences between tree subsets with extreme reactions (lowest needle loss, highest needle loss) within the populations were found at one gene locus at least. (orig./UWA).

4394 (KFK-PEF–80-Vol.1, pp. 121-131) **Detection of damages of trees with time resolved luminescence.** Schneckenburger, H. (Fachhochschule Aalen (Germany)); Schmidt, W. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt

The novel spectrophotometers and procedures monitoring both long term delayed luminescence (LDL) and picosecond fluorescence decay as employed for the first time in forest decline research and described in the 'PEF-status report 1990' have been further developed. Reliable data of picosecond fluorescence decay are available since Dec. 1989, of LDL-kinetics since May 1990. We report on results obtained with so-called 'open top chambers' which allow comparative measurements of spruces growing in environmental respectively in purified air. Similarly we present data obtained with spruces of various degree of decline as primarily defined in terms of needle-loss and yellowing. All measurements were exclusively performed with green, 'intact' specimen without visible damage rather than with already visibly damged samples. Significant dependencies on various factors such as location, environmental impact and degree of decline are unmistakable. In addition, as typical for physiological entities in general, all parameters measured exhibit a distinct and 'intrinisic' variation during the vegetation period, independend of the mentioned factors of impact. Therefore, the data obtained from one single, individual measurement cannot be correlated in an unique way with the physiological status of the tree serving as 'key parameter' for early diagnosis. (orig./UWA).

4395 (KFK-PEF–80-Vol.1, pp. 133-143) **Changes in photosynthetic activity, chlorophyll-fluorescence parameters and pigment content of differently damaged spruces during the vegetation period.** Rinderle, U. (Karlsruhe Univ. (T.H.) (Germany). Botanisches Inst. 2); Lichtenthaler, H.K. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

We performed investigations on photosynthetic activity, chlorophyll fluorescence and pigment content of differently damaged, 40 year old spruce trees. Stress and damage of trees/needles are preferentially indicated by lower values of the chlorophyll and carotenoid content, of the pigment ratio (a+b)/(x+c), the assimilation rate P_N/m^2, the stress- adaptation index Ap, the height of the saturation pulse spikes (g- h) of chlorophyll fluorescence and the fluorescence ratio (Fv)m/Fm. In contrast, the values of the non-photochemical quenching-coefficient qNP and the fluorescence ratio F690/F735 are much increased. The parameters of the in-vivo chlorophyll fluorescence were established as good indicators of the photosynthetic activity in addition to the CO_2 gas-exchange measurements. The differential development of damage or partial regeneration of the spruces is presented for the period of April 1989 to November 1990. The reduction and damage of photosynthesis, as caused by a combined light, temperature and ozone stress in June 1990, is presented. (orig./UWA).

4396 (KFK-PEF–80-Vol.1, pp. 145-155) **Reflectance spectra of leaves and needles as basis for the physiological evaluation of tree damage. Pt. 4. Composition of chlorophyll-protein-complexes and first estimation of biomass production.** Buschmann, C. (Karlsruhe Univ. (T.H.) (Germany). Lehrstuhl fuer Pflanzenphysiologie und Pflanzenbiochemie); Nagel, E.; Rang, S.; Stober, F.; Stuetzel, M. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). It is demonstrated that reflectance spectra and absorption spectra of spruce needles in the visible spectral range are influenced not only by the composition of leaf pigments (mainly chlorophyll-protein-complexes necessary for photosynthesis) but also by the structure of the needle tissue. Im damaged spruce trees changes in the composition of the chlorophyll-protein-complexes occur which can be deduced from the second derivative of the spectra. An estimation on biomass production from number, area and photosynthesic capacity of needles is presented. Obviously, the loss of older neddles and the decrease of photosynthesic capacity can partially be compensated by a stronger formation of younger needles and an enlargement of single needles. For the classification of the status of health of a tree we propose (a) to examine the composition of the chlorophyll-protein-complexes (measurement of reflectance and absorption spectra with the VIRAF-spectrometer) and (b) in parallel to estimate the biomass production by measuring the photosynthesic capacity (CO_2-porometer) and the number and area of needles (image analysis system). (orig.).

4397 (KFK-PEF–80-Vol.1, pp. 157-169) **Soil ciliates as indicators of fundamental changes in forest ecosystems.** Lehle, E. (Ulm Univ. (Germany). Abt. Oekologie und Morphologie der Tiere); Funke, W. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). The ciliate populations of various southern german soils were studied. The combined application of lime and mineral fertilizer led in field experiments to a substantial increase of active ciliates. Most species preferred a slightly acid to neutral environment in laboratory cultures. The substrates from the spruce forests of the lime-alpines, the deciduous forests and the orchard meadows were species rich. Strong acidified soils of struce forest were poor of species: Liming as well as liming in combination with lime-ammonnitric fertilization led, probably due to a activation of a latent species potential, to an increase in the species number. The succession of the species number in laboratory cultures in the substrate of the research areas SCHLUCHSEE (S) and VILLINGEN (V) showed all the same pattern. In V higher numbers of species were found 6 days after application at the fertilizes areas compared to the control areas. Ciliates are a very heterogenous group due to their trophic structure. The exological adaptation of serveral distinct species is described (orig./UWA).

4398 (KFK-PEF–80-Vol.1, pp. 171-183) **Multi-element analysis of invertebrate animals in the ecosystem 'spruce stand'.** Roth-Holzapfel, M. (Ulm Univ. (Germany). Abt. Oekologie und Morphologie der Tiere); Funke, W.; Rittner, P. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). Elementanalytical investigations have been carried out on invertebrate animals (Annelida, Arthropoda) of an 80-year-old monoculture of Norway spruce (Picea abies L. Karsten). The study site is situated at the southeast edge of the Swabian Alb, approximately 3 km northwest of Ulm. In the most important species of the invertebrate meso- and macrofauna (Lumbricidae, Enchytraeidae, Araneae, Oribatidae, Diplopoda, Collembola, Coleoptera, Hymenoptera, Diptera) the concentrations of 18 elements have been determined in dependance of the systematic and trophic level of the respective species. The data were screened for organisms being indicative for heavy metal pollution. The spectrum of elements included alkaline and earth- alkaline metals with macronutrient function, as well as essential and potentially toxic trace metals. In

addition the concentrations of P have been determined, as part of an anion ($PO^{-}4$), which constitutes a possible partner of metals in biochemical compounds. The concentrations of elements were measured by ICP-atomic emission spectroscopy (Al, Ba, Ca, Cu, Fe, K, La, Mg, Mn, Na, P, V, Zn) and flameless atomic aborption spectrometry (Cd, Co, Cr, Ni, Pb). (orig./UWA).

4399 (KFK-PEF–80-Vol.1, pp. 185-191) **Uptake and localization of nutritive and potentially toxic minerlas in ectomycorrhizae of forest trees.** Kottke, I. (Tuebingen Univ. (Germany). Uptake and localization of potentially toxic elements, especially aluminium, in mycorrhizas are investigated to clarify if mycorrhization results in effective detoxification of these elements. Localization and identification of elements is achieved by electron-energy-loss-spectroscopy (EELS) and imaging (ESI) on the TEM902, Zeiss. Aluminium had been found to be precipitated on the outside of rootlets and in polyphosphate droplets of hyphae. Several technical problems were further investigated. Barley roots were analyzed for aluminium deposition and aluminium was found in high amount on the root surface, the intercellular space and in polyphosphate droplets, which is shown here for the first time. Kryofixed, freeze-dried and embedded samples did not allow good sectioning for analysis up to now. Analysis of heavy metal deposition in mycorrhizas was started on material from plots and laboratory experiments. Observation of mycorrhizal development in rhizoscopes was continued on the plots Schloellkopf and ARINUS and samples taken for analysis. (orig./UWA).

The results of both measured and calculated element fluxed in the experimental watersheds SCHLUCHSEE and VILLINGEN are discussed. Using this information, we can distinguish between the amount of internal element fluxes within the ecosystem and external atmospheric input. The different amounts of internal and external fluxes are used to explain the degree of element output and the hydrochemical behavior of surface waters and groundwater. Net export from the watershed and net mobilization of elements in the watershed are balanced using estimations of annual elemental fixation by the stand, element fluxes in open land and canopy throughfall, total deposition, fixation by the stand biomass and watershed output. Despite similar atmospheric deposition of S and N, the turnover of both elements in the two study areas differs considerably. The different pattern of element output between these watersheds results from different retention and mobilization processes along their respective hydrological pathways. Potassium and $Mg^{2}+$ show only slight losses due to drainage export after fertilization, whereas output rates of applied S and N correspond to the different pattern of element cycling in the two study areas. (orig./UWA).

4401 (KFK-PEF–80-Vol.1, pp. 217-229) **Heavy metal budget of Norway spruce.** Trueby, P. (Freiburg Univ. (Germany). Inst. fuer Bodenkunde und Waldernaehrungslehre); Liu, J.C.; Zoettl, H.W. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). This investigation focussed on determining the distribution of biomass and heavy metals in relation to the age of Norway Spruce. To simulate the temporal changes of biomass a calculation model was developed. This model is also suitable for the calculation of heavy metal turnover by needle and twig fall and the estimation of the output by final harvest. The highest amount (up to 90% of the total) of heavy metals is stored in the wood of trees. This holds true for any age of trees. The amount stored in needles is generally lower than 5%. Only 10% of total lead is directly deposited from atmosphere. Most of the lead is taken up by roots. There is evidence that Cd and Zn are almost completely taken up from the soil. Both of the elements are probably leached from the bark. The heavy metal turnover by needle and twig fall is an essential component of the heavy metal budget of Norway spruce. There is an essential output of heavy metals by final harvest. With regard to Pb and Zn up 2/3 of the amount accumulated in the tree biomass is exported. However, in comparison with the total reserves of the soil the loss is very low, except for Zn. (orig./UWA).

4402 (KFK-PEF–80-Vol.1, pp. 241-252) **Mineral weathering and mineral destruction caused by acidification in forest stands of the Black Forest (Germany). First communication. Major aims and first results from the ARINUS stands 'Schluchsee and Villingen'.** Zarei, M. (Hohenheim Univ., Stuttgart (Germany). Inst. fuer Bodenkunde und Standortslehre); Stahr, K.; Papenfuss, K.H. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). Geochemical, micromorphological methods as well as X-ray diffractometry, X-ray fluorescence, scaning - as well as transmission -electron microscopy are used to follow mineral weathering, mineral newformation and mineral transformation in soils of the Black Forest. An examination of the actual amount of minerals in selected stands of the Black Forest will take place and will be compared with samples of the same profiles stored in archives. Furthermore some model experiments will take place to explain the changes observed. The results of X-ray diffractometry show in general an increase of secondary chlorites from the C-horizon towards the lower B-horizon of all examined profiles. The results are in agreement with the assumption of an effect of imported acidity on the weathering equilibria. (orig./UWA).

4403 (KFK-PEF–80-Vol.1, pp. 253-261) **Histological and histochemical investigations on the nutrient dynamics in forest trees with regard to the 'New-type forest decline'. Pt. 4. Binding forms and micromorphological distribution of calcium in spruce needles.** Fink, S. (Tuebingen Univ. (Germany). Lehrstuhl fuer Physiologische Oekologie der Pflanzen). Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). (CONF-9103265–Vol.1: 7. annual report of the Research Program for Air Pollution Prevention Measures of Kernforschungszentrum Karlsruhe GmbH, Karlsruhe (Germany), 5-7 Mar 1991). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

Histological and histochemical investigations on the nutrient dynamics in forest trees with regard to the 'New-type Forest Decline'. IV. Binding forms and micromorphological distribution of calcium in spruce needles. The chemical binding forms of calcium in spruce needles from different sites were partitioned by sequential extraction of powdered needles into a water-soluble fraction (free Ca), an acetic acid- soluble fraction (Ca-pectate), and a hydrochloric acid-solubie fraction (Ca-oxalate); the amounts were determined

quantitatively at two dates in 1990. In addition, the micromorphological distribution of the last two fractions was determined by specific histochemical reactions on thin sections at the level of the light and electron microscope. The major amount of calcium in the needles proved to occur as Ca-oxalate, increasing absolutely and relatively with increasing needle age. The water-soluble fraction is smaller and independent of the Ca-supply from the soil, but changes during the year and with increasing needle age. Besides leaching of calcium from the outer epidermal cell walls under the impact of acidic deposition, unusual accumulations of Ca-oxalate crystals from the cell walls into the cells resp. within the vacuoles of epidermal and mesophyll cells were found in a number of spruce needles, possibly as a result of the impact of ozone. (orig./UWA).

4404 (KFK-PEF–80-Vol.1, pp. 273-284) **The dependence of the success of natural regeneration on upper soil conditions and degree of acidity in declined forest stands of the Black Forest.** Huss, J. (Freiburg Univ. (Germany). Waldbau-Inst.); Littek, T. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. {increasing acidification an nutrient deficiency caused by acid deposition.} In order to study the effects {of} especially of the upper soils, on germination and further development of the seedlings of 6 mountain tree species 4 test plots have been established in the Black Forest and also a parallel experiment in the greenhouse. The effects of additional site preparation and fertilization (and the effect of artificial acid rain) have been studied. On soils with high acidification an low nutrient contents negative effects on natural regeneration are to be expected: In many cases lower germination- and survival rates have been observed in comparision to better soil conditions. These effects were evident on all soils in the greenhouse without any fertilization but additional artificial rain, especially on the poorest upper soil. It was possible to decrease the damages by site preparation and also by liming. (orig./UWA).

4405 (KFK-PEF–80-Vol.1, pp. 285-294) **Statistical analysis of the physiological and biochemical data from the PEF research groups.** Urfer, W. (Dortmund Univ. (Germany). Fachbereich Statistik); Schaetzle, H. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaeisches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF). Apr 1991. (In German). In *7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe.* 404p. Order Number DE93729025. Source: OSTI; NTIS (US Sales Only).

For pooling the physiological and biochemical data sets of all research groups a data bank is established as a prerequisite for statistical data analysis. By means of exclusion experiments the response with regard to all parameters can be analysed by non-parametric discriminant analysis. This procedure does not assume any specific kind of multivariate distribution of the data and has the advantage to find indicators that are specific signs for responses of plant metabolism in relation to loads of air pollutants. Because correlation does not imply causation, we discuss a particular model for causal inference. The statistical solution of the Fundamental Problem of Causal Inference replaces the impossible-to-observe causal effect of a treatment on a specific unit with the possible-to-estimate average causal effect of a treatment over a population of units. Finally we recommend the profile analysis for the investigation of the temporal dynamics of biochemical and physiological symptoms. (orig.).

Mineral flowrates in waters passing the canopies have been monitored weekly for 4 years as possible indicators for pollutant deposition and mineral leaching. The results can be summarized as follows: Compared to trees in charcoal filtered air, the fluxes of manganese, calcium and magnesium per canopy surface are always enhanced in ambient air, the effects are more pronounced in winter than in summer seasons. The concentrations and fluxes of these cations are strongly related to sulfate. Potassium is only related to dissolved organic carbon (DOC). In parallel with decreasing SO_2-concentrations since 1986, the effects of charcoal filtering on mineral cycling are also decreasing. The needle and soil analysis indicated that the elevated leaching rates of nutrient cations were compensated by root uptake. The driving force for the leaching process was sulfur deposition, weather conditions which prolongated canopy wetting amplified the effects. (orig./UWA).

Measurements on spruce trees growing on natural site in open-top-chambers with charcoal- filtered and ambient air were continued. Further to the determination of diurnal courses of CO_2/H_2O gas exchange parameters under normal ambient conditions, measurements of the performance of photosynthetic apparatus were carried out by studies of light and CO_2 response curves on intact branches under controlled climatic conditions. The results indicate a lowered photosynthetic performance on youngest needle age class of spruce trees growing in ambient air from early summer 1990. More distinct effects appeared at the end of vegetation period. Beside reduced parameters indicating possible damages of mesophyll, spruce trees growing in ambient air showed markedly reduced relations between assimilation rate and stomatal conductance. Diurnal course measurements also showed higher transpiration rates in comparison with spruce trees growing in charcoal-filtered air. The results may be a hint for effects of air pollutants like ozone linked to drought. (orig./UWA).

4408 (KFK-PEF–80-Vol.1, pp. 335-344) **Open top chamber experiment 'Edelmannshof': Determination of biochemical parameters in needles of Norway spruce fumigated with unfiltered or charcoal-filtered air in comparison to untreated trees.** Egger, B. Lyophilized needle homogenates, obtained from about 21-year-old spruce trees (Picea abies (L.) Karst.) are biochemically characterized in relation to the environmental conditions and their modification (Edelmannshof, Welzheimer Wald). The respective trees (2 for each treatment) were either kept in open-top chambers and fumigated with unfiltered or charcoal- filtered ambient air, or were experimentally not affected. Biochemical parameters assay are intermediates of energy (ATP,ADP) and carbohydrate

metabolism (here we focus on the regulation of carbon partitioning between starch and sucrose). The data represent needle samples collected between May 1989 and October 1990. Samples exposed to ambient air showed slightly increased pool sizes of sucrose and fructose 2,6-bisphosphate and an increased ratio of ATP/ADP. An increased ratio of ATP/ADP was also found in samples taken from the same trees between April 1987 and February 1989. This ratio could thus be indicative for a biochemical response to air constituents affecting metabolism at a stage were still no visible symptoms exist. (orig.).

4409 (KFK-PEF–80-Vol.1, pp. 345-364) **Biochemical and physiological investigations to detect effects of air pollutants on spruce in open-top-chambers.** Manderscheid, R. (Giessen Univ. (Germany). During the year 1990 despite high summer ozone levels no clear indication for air pollution effects could be found at the Edelmannshof site. Several components of antiocidative systems (ascorbate, glutathione; activity of ascorbate peroxidase) and of the nitrogen metabolism, which are known as early indicators of air pollution, have been measured. Significant differences between the trees of the clean and ambient air treatment have only been found with respect to the amino acid content. The spruces kept in the chambers with charcoal- filtered air contained higher levels of some amino acids from February till summer. It is discussed, whether this difference resulted from long-term effects of the reduction of the air pollution level or from the drought period occuring in 1989 an 1990. Small chamber effects on ascorbate,glutathione and glutamate/glutamine ratio continued in 1990. Measurements on diurnale changes of polyamine and amino acid content in early summer yielded fluctuations of the polyamine level in the range of about 30%. Single amino acids underwent strong diurnale changes. Some damaged trees contained higher activity levels of ascorbate peroxidase and superoxiddismutase during the early development of the new flush. (orig./UWA).

The project 'Reference Data of Forest Growth' examines if and to what extent present growth of the Norway spruce (Picea abies Karst.) differs from that of previous decades. Dendrometric measurements, some dating back to the last century, have been processed and compared with today's data. The present growth of the investigated spruce stands was never beneath that of the previous generation. On pooreer sites, growth during the last hundred years increased more than on the more fertile sites, where there was little or no increase. Possible couses of this increase are throught to be the combined effects of atmospheric deposition (especially nitrogen), a higher mineralization rate, CO_2-increase and climate. (orig./UWA).

4411 (KFK-PUG–4) **First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.** Horsch, F.; Friebel, P.; Seidel, A. (comps.). Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. 220p. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

On the 18th and 19th of March 1992 the First Status Report of the project 'Environment and Health' (PUG) took place at the Nuclear Research Center Karlsruhe. Progress reports on the following topics were presented: Correlation between air pollution and respiratory diseases; Illnesses caused by allergens and environmental pollutants in food. Separate entries were prepared from 13 papers out of 18. (orig./MG).

4412 (KFK-PUG–4, pp. 1-2) **Effects of outdoor and indoor air pollution on lung function, bronchial hyperreactivity, risk of pulmonary disease and course of disease.** Eltschka, R. (Medizinische Universitaetsklinik Freiburg (Germany). Abt. Pneumologie); Herceg, R.; Moseler, M.; Matthys, H. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

The effect of outdoor exposure to SO_2, NO_2, ozone, and particulate pollutants on pulmonary function and respiratory discomfort was studied over a period of 1 1/2 yr in 133 non smoking adults. The weekly mean individual outdoor pollutants were analysed for all 133 participants with regard to habitation and place of work. The analyses of the longitudinal study shows a significant correlation between daily peakflow measurements and ozone levels in patients with symptomatic asthma bronchiale (SAB) and chronic obstructive pulmonary disease (COPD). For pollen, SO_2, NO_2 and anorganic particulate pollutants we did not find any significant effects on peak expiratory flow measurements. On the basis of these results which are supported by several experimental ozone studies it appears advisable to lower the present limits for maximal ozone levels (200 $\mu g/m^3$) in Germany. (orig./MG).

4413 (KFK-PUG–4, pp. 37-47) **The effect of ozone inhalation on the airway response to inhaled allergens.** Joerres, R. (Krankenhaus Grosshansdorf, Zentrum fuer Pneumologie und Thoraxchirurgie (Germany)); Nowak, D.; Magnussen, H. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

In this study we address the question whether breathing of ozone affects the airway responsiveness to inhaled allergens. We investigate groups of subjects with different state of their allergic disease (seasonal allergic rhinitis without pulmonary complaints, seasonal allergic asthma with pulmonary complaints, healthy controls). Within the groups, ozone sensitive subjects are selected according to their functional response during experimental exposure to ozone. These preselected subjects are exposed to clean air of 0.25 ppm ozone during intermittent exercise on two different days. We measure lung function and airway responsiveness to methacholine before and after exposure, and airway responsiveness to an inhaled allergen is determined after each exposure. By this approach, we can assess the relationship between the disease of the subjects, the effects of ozone on lung function, and its effects on airway responsiveness. Our study will contribute to the problem whether the airway response to an inhaled allergen and the manifestation of pulmonary symptoms after allergen exposure can be modulated by prior exposure to ozone. (orig.).

4414 (KFK-PUG–4, pp. 49-60) **Effect of exposure to ozone and subsequent infection with respiratory syncytial virus (RSV) on alveolar macrophage functions and immune responses to inhaled antigen.** Freihorst, J. (Kinderklinik der Medizinischen Hochschule Hannover, Abt. Paediatrische Pneumologie (Germany)); Hardt, H. v.d.; Franke, G.; Muhle, H.; Lohmann-Matthes, M. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In

German). (CONF-9203204--: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

Using an animal model (BALB/c-mice) we investigate the combined effect of an exposure to ozone and subsequent respiratory infection with Respiratory Syncytial Virus (RSV). Groups of BALB/c-mice were exposed to ozone (0.5 ppm, 6 hrs/day) or clean air for 2 wks, and subsequently infected with RSV, $5x10^4$ PFU/dose intranasally (I/N). From day 4 to day 8 after infection (p.i.) the animals received I/N doses of ovalbumin (OVA) with Alum-adjuvant. At different intervals bronchioalveolar lavage (BAL) was performed, alveolar macrophages were separated and assessed for secretion of mediators IL-1, IL-6, Prostaglandin E2 (PGE2) and Tumor Necrosis Factor (TNF). Serum samples were obtained at day 28 p.i. and assessed for OVA-specific IgG- and IgE-antibodies by ELISA. While ozone exposure alone did not alter measured parameters as compared to control animals, alveolar macrophages isolated from RSV-infected mice showed increased production of IL-6, PGE2, and TNF; further enhancement was seen in the group exposed to ozone prior to infection. A significant increase in IL-1 production was only seen in the ozone exposed and RSV-infected group. These animals also had significant higher OVA-specific antibody titers in their serum compared to all other groups. (orig./MG).

4415 (KFK-PUG–4, pp. 61-75) **Studies of pathophysiologic and pathomorphologic effects of inhalative exposure to low concentrations of the air pollutants NO_2 and SO_2 on the epithelium of trachea, submucosal tracheal glands and peripheral airways in the rat.** Wagner, U. (Marburg Univ. (Germany). Medizinische Poliklinik); Amon, D.; Kimpel, C.; Saalmann, R.; Wichert, P. von; Barth, P.J. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204--: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

Male Sprague-Dawley rats were exposed alternatively to 5, 10 and 20 ppm NO_2 and SO_2 the exposure-time being 3 or 25 days respectively. Studies by means of the Ussing-chamber-technique (radiolabelling mucins with ^{35}S) clearly demonstrated a concentration dependant modulation of mucus secretion. Exposure to increasing concentrations of the pollutants produced significant rises of basal and stimulated secretion. Compared to each other the NO_2-exposed animals all together displayed lower secretory levels than did the SO_2-exposed ones. 25 day's exposure rather caused moderately higher secretion rates than 3 day's exposure. The concentration seems to be of major influence than the duration of exposure. Pathomorphologic effects of exposure to both pollutants were quantified measuring the wall thickness of bronchioli respiratorii and alveolar septa by semiautomatic image analysis. 10 and 20 ppm NO_2 caused significant concentration-dependant increases of both parameters whereas 5 ppm was without effect compared to controls. SO_2 could not be demonstrated to act on alveolar septa, but produced a significant rise of wall thickness in bronchioli respiratorii at concentrations of 20 ppm. Moreover the number of nuclolar organizer regions (AgNOR) was assessed by automated image analysis as a marker of regenerative activity in the epithelium of main stem bronchi and bronchioli respiratorii. Significant concentration dependant increases of AgNOR number could be demonstrated due to NO_2-exposure with a different distribution pattern between main stem bronchi and bronchioli respiratorii, the latter showing significant alterations already due to lower concentrations as does the former. Thus AgNOR-analysis, proves to be a valuable and sensitive tool for the assessment of regenerative activity epithelium due to even low concentrations of the pollutants. (orig./MG).

4416 (KFK-PUG–4, pp. 77-102) **Characterization of surfactant apoproteins after damage of alveolar tissue caused by exposure with NO_2, and their pathogenetic role in toxic lung injury.** Mueller, B. (Marburg Univ., Pneumologisches Forschungslabor der Medizinischen Poliklinik (Germany)); Mengel, R.G.; Wichert, P. von. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204--: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). We now for the first time studied the in vivo alterations (10 ppm, 72 hours) of the SP-A after nitrogen dioxide inhalation and compared it to in vitro exposure effects (5 and 10 ppm, 4 h). Exposure of rat SP-A to nitrogen dioxide showed, (1) a higher pool size after in vivo exposure, (2) a slightly decreased mannose binding capacity for the in vivo exposed form, but a highly decreased binding after in vitro exposure, (3) an affected protein-lipid aggregation that was impaired most by the in vitro exposed protein, (4) a low inhibition for the secretion of phosphatidylcholine in isolated type II pneumocytes, (5) no difference in apparent molecular weight and immunological reactivity of the differently exposed SP-A. The nitrogen dioxide induced alterations of the surfactant protein A may contribute to the pulmonary toxicity of this oxidant. It is clear from this study that the extend of the effects from in vivo and in vitro exposure are different. Therefore both forms of exposure are necessary to assess the biological significance of nitrogen dioxide exposure. Besides SP-A β-adrenergic agents play an important role as candidates for surfactant metabolism control in vivo. After in vivo exposure to NO_2 (5 ppm, 48 h) surfactant phospholipid metabolism was changed when analyzed in the model of the isolated, ventilated and perfused rat lung: (1) cells from lung lavage showed an increase in phosphatidylcholine contents, percentage of phosphatidylcholines and incorporation of ^3H-palmitate. Incorporation of palmitic acid was stimulated both in healthy and NO_2 exposed rats by β-agopnist in vitro, whereas for ^{14}C-choline this was only possible in healthy animals, (2) after NO_2 exposure lung tissue showed an increase in phospholipid contents and a reduced percentage of sphingomyelin. Incorporation of ^3H-palmitate and ^{14}C-choline remained unchanged after NO_2 inhalation as well as β-adrenergic stimulation. (orig./MG).

4417 (KFK-PUG–4, pp. 103-113) **Results of a chronic inhalation with N-nitrosodimethylamine (NDMA) and SO_2/NO_x.** Klein, R.G. (Deutsches Krebsforschungszentrum, Heidelberg (Germany). Inst. fuer Toxikologie und Chemotherapie); Hermann, R.; Janowsky, I.; Zeller, W.J.; Schmezer, P.; Edler, L.; Amelung, F. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204--: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

We will present the results of a chronic carcinogenicity bioassay performed to discern combination effects of the environmental toxicants SO_2 and NO_x and the carcinogenic NDMA at low concentrations. On the basis of previous in vitro experiments this study was carried out by exposing female Sprague-Dawley rats lifelong with the chemicals by inhalation. A high tumor incidence occurred in the nasal region of all NDMA-exposed rats and a significant decrease in survival was observed compared to control animals and animals exposed to SO_2 and NO_x only. The overall tumor rate in the target organ (nasal epithelium) was not influenced by the additional inhalation of SO_2 or NO_x and showed values of more than 90% in the NDMA-groups. Becase of this surprisingly high tumor rate, it was not possible to apply methods of prevalence analysis. However, the differences in the malignancy of nasal tumors were found to be statistically significant between NDMA-treated groups (NDMA: 2 carcinomas, NDMA + SO_2: 11, NDMA + NO_x: 8). The carcinomas of the NDMA + NO_x-group showed the shortest median tumor induction time (536 days) compared to carcinomas of the other groups (NDMA: 631, NDMA + SO_2: 714). In animals without nitrosamine exposure no tumors of the nasal epithelium were observed. Also, no tumors of the lower respiratory tract or the

lungs were found in any group. The rate of neoplasia in other organs than the nose was similar to values of spontaneous tumors reported in the literature. In order to confirm this possible trend that malignancy increases with the simultaneous SO_2 or NO_x exposure, additional experimental data are needed from tests performed at lower nitrosamine concentrations and with larger groups of animals. (orig./MG).

4418 (KFK-PUG–4, pp. 115-124) **Metabolic changes of human lung fibroblasts after exposure to ozone.** Mayer, D. (Thoraxklinik Heidelberg-Rohrbach (Germany)); Vogt-Moykopf, I. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

Previous investigations demonstrated elevated concentrations of hyaluronate (HA) in culture media of human lung fibroblasts after their exposure to 0,5 ppm ozone for 20 h; in one cell line, HA synthesis had been enhanced. These results were interpreted against the background of fibrotic alteration of lung tissues. Northern-blot-hybridizations using a cDNA probe containing the gene of the preproα2(I)-chain for collagen I suggest reduced transcription of that gene in cultivated cells after exposure to 0,5 ppm for 20 h. However, sample size does not yet permit final conclusions. No transcription of the preproα2(I) gene for collagen I could be assayed in RNA from solid lung tissue. (orig./MG).

4419 (KFK-PUG–4, pp. 125-136) **Investigations on lucigenin-enhanced chemiluminescence of alveolar macrophages following exposure to exogenous noxious agents.** Zeller, W.J. (Deutsches Krebsforschungszentrum, Heidelberg (Germany)); Brehm, M.; Schiller, E. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

Alveolar macrophages lavaged from bovine lungs using Ca^{2+} and Mg^{2+}-deprived saline containing EGTA for calcium chelation were cultivated in RPMI-1640 medium. Lucigenin-enhanced chemiluminescence was measured using a LB 9505 C Biolumat (Berthold) following exposure of cells to micronized quartz. The present report is mainly focussed on methodical problems and results (e.g. optimal cell number, dosage of quartz and metal salts). There was a dose related increase in chemiluminescence following exposure to quartz. The efficiency of cells following exposure to quartz alone or in combination with metal salts was monitored by exposure to a second stimulus using phorbol-12-myristate-13-acetate (PMA). Our results indicate that the combination of quartz plus Fe^{2+}- or Fe^{3+}-salts resulted in a significant damage of cell function. (orig.).

4420 (KFK-PUG–4, pp. 137-147) **Dust induced stimulation of reactive oxygen species release in bovine alveolar macrophages.** Gercken, G. (Hamburg Univ. (Germany). Abt. fuer Biochemie und Molekularbiologie); Berg, I.; Schlueter, T. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

Alterations of reactive oxygen intermediates (ROI) release were studied after incubation of bovine alveolar macrophages (BAM) with different dusts and metal ions. Dust fractions of city waste and sewage fludge incineration, a power station ash, a mineral dust, a metal dust, and quartz dusts were used. Incubation of BAM with the dusts caused an increasing secretion of ROI, which was found to be concentration dependent. The metal containing dusts were analyzed for their element contents by AAS and AES-ICP. H_2O_2-secretion correlates best with the elements Fe, Mn, Cr, V, As, Co, and Si. Time course experiments (15 to 90 min) revealed an increased ROI release already after an incubation time of 15 min lasting for the whole investigated period. Fe^{3+} (1 μM), but not Fe^{2+} (1 μM - 100 μM) enhanced the quartz dust induced release of ROI. Omission of Ca^{2+} and Mg^{2+} in the stimulation buffer containing quartz dust diminished ROI release to control values. Incubation with Mg^{2+} alone decreased the quartz response to about 60%. In accordance, cytometric monitoring of intracellular Calcium values showed a dust induced calcium transient, which disappeared in the absence of extracellular Ca^{2+} and Mg^{2+}. Moreover, replenishing Ca^{2+} in the stimulation buffer restored the $[Ca^{2+}]_i$ transient. (orig.).

4421 (KFK-PUG–4, pp. 149-161) **Combined effects of gases and particles on alveolar macrophages in vitro.** Polzer, G. (Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Genetik und Toxikologie); Mosbach, M.; Matejka, M.; Lind, I.; Schmidt, A.; Seidel, A.; Mayer, D. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

Bovine alveolar macrophages (BAM) were exposed in vitro to Ozone or NO_2 by a gas phase culture technique. Ozone alone (2.5 ppm, 2 h) induced the release of Tumor Necrosis Factor (TNF) and of a chemotactic factor for alveolar macrophages. The viability of the cells remained normal. Previous phagocytosis of latex (250 μg/ml) or quartz (50 μg/ml) had no additional effects. The chemoattractant activity in the culture supernatants is thermolabile, and can be reduced by pretreatment of the BAM with Actinomycin D or addition of antibodies to C5. Inhibitors for release of Prostaglandins or Leucotriene B_4 had no effect. NO_2 in high concentration (3.5 ppm, 4 h) had an influence on the cell morphology and reduced viability. The LPS- and Zymosan-triggered release of ChF and O_2^- was reduced after NO_2 exposure. By slight modifications of the exposure techniques also calcitriol-differentiated HL60-cells could be exposed in gas phase. These cells produce TNF and O_2^- upon stimulation with the usual agents and show chemotactic migration. (orig.).

4422 (KFK-PUG–4, pp. 163-174) **Studies on the detection of toxic, genotoxic and carcinogenic effects induced by exposure to heavy metals.** Schmezer, P. In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

The current report summarizes our experiments on the detection of genotoxic effects induced by $CdSO_4$ and $Na_2Cr_2O_7$ in the respiratory tract of rats. The assays were performed by incubating primary suspension cultures of rat lung cells and nasal mucosa cells with the chemicals or by analysing these cells immediately after their isolation from rats which had been exposed to the chemicals during short-term inhalation studies. Cytotoxic and DNA-damaging effects were detected by dye exclusion and electrophoresis techniques, respectively. $CdSO_4$ as well as $Na_2Cr_2O_7$ induced DNA-damage within these cells after their in vitro incubation with the test chemicals, whereby the effects were more pronounced in lung cells than in nasal mucosa cells. Following in vivo inhalation of aerosols, both heavy metal compounds were genotoxic in the lung, but our results so far revealed only $CdSO_4$ to clearly induce DNA-damage in the nasal mucosa. These results will be discussed in context with preliminary data on the bioavailability of the chemicals in lung, liver, kidney, and in nasal lavage

following inhalation exposure. Finally, the outline of a chronic inhalation study (combination of $CdSO_4$ and N-nitrosodimethylamine) will be described. (orig.).

4423 (KFK-PUG–4, pp. 175-189) **Matrix structures in preneoplasias and lung tumours. Correlation to environmental noxes.** Mueller, K.M. (Berufsgenossenschaftliche Krankenanstalten Bergmannsheil, Bochum (Germany). Inst. fuer Pathologie); Fisseler-Eckhoff, A. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

The examinations finished in the first part of our research project led to the following results: 1. 7 months after tracheal application of asbestos fibres in animal experiments, adenoid dysplasias with cellular atypias comparable to human preneoplasias could be demonstrated. The degree of epithelial atypia was histochemically qualified by the help of reproducable increase in expression of nucleolar organizing regions in human preneoplasias as well as in experimentally induced ones. 2. Immunohistochemical and electromicroscopical examinations of collagenous and non-collagenous matrix structures proved evidence of both destruction and poor production of collagenous and non-collagenous structures of the basement membran in parabasal areas of dysplasias. 3. By the help of non-radioactive in situ hybridisation with probes made of laminin and collagen, the expression of matricial proteins was demonstrable not only in connective tissue cells but also in epithelial cells of pneumocytes type II. 4. Correlations between malignant lung tumours manifested differently concerning histomorphology and phenotype and environmental noxes qualified both quantitatively and qualitatively such as chrome, nickel and asbestos, led to no reproducable noxes-specific results in comparison to other so-called tumour noxes. To sum it up, the results gained in the examinations reinforce the hypothesis claiming multi-genetic defects to be responsable for the development of manifest malignant tumours. Tumours develop via different degrees of dysplasias depending on different environmental noxes, which often act on in a synchronic or additive way. (orig.).

4424 (LBL–32636) **Risk factors for work-related symptoms in northern California office workers.** Mendell, M.J. Lawrence Berkeley Lab., CA (United States). Oct 1991. 113p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE93000637. Source: OSTI; NTIS; GPO Dep.

In most episodes of health complaints reported in office buildings in the last-twenty years, causal factors have not been identified. In order to assess risk factors for work-related symptoms in office workers, a reanalysis was performed of previous studies, and an epidemiologic study was conducted. The reanalysis of data, showed remarkable agreement among studies. Air-conditioned buildings were consistently associated with higher prevalence of headache, lethargy, and eye, nose, or throat problems. Humidification was not a necessary factor for this higher prevalence. Mechanical ventilation without air-conditioning was not associated with higher symptom prevalence. A study was conducted among 880 office workers, within 12 office buildings selected without regard to worker complaints, in northern California. A number of factors were found associated with prevalence of work-related symptoms, after adjustment in a logistic regression model for personal, psychosocial, job, workspace, and building factors. Two different ventilation types were associated with increases Ln symptom prevalence, relative to workers in naturally ventilated buildings: mechanical supply and exhaust ventilation, without air conditioning and with operable windows; and air-conditioning with sealed windows. No study buildings were humidified. In both these ventilation types, the highest odds ratios (ORs) found were for skin symptoms (ORs-5.0, 5.6) and for tight chest or difficulty breathing (ORs-3.6, 4.3). Use of carbonless copies or photocopiers, sharing a workspace, carpets, new carpets, new walls, and distance from a window were associated with symptom increases. Cloth partitions and new paint were associated with symptom decreases.

4425 (PNL–8302-Vol.1) **Ecological evaluation of proposed discharge of dredged material from Oakland Harbor Into ocean waters (Phase 3 A of -42-foot project): Volume 1, Analyses and discussion.** Ward, J.A. (Battelle/Marine Sciences Lab., Sequim, WA (United States)); Word, J.Q.; Pinza, M.R.; Mayhew, H.L.; Barrows, E.S.; Lefkovitz, L.F. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 169p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE92041335. Source: OSTI; NTIS; GPO Dep.

The Battelle/Marine Sciences Laboratory (MSL) conducted a study to detemine whether dredged sediments from Oakland Inner and Outer Harbors were, suitable for ocean disposal. Nineteen test treatments, six reference treatments, and control treatments were tested for physical/chemical parameters, water column effects, dredged sediment-toxicity, and bioaccumulation potential. Physical/chemical parameters were analyzed at each site and each composite sediment to a depth of -44 ft MLLW. These parameters included analysis for geological characteristics, conventional sediment measurements (grain size, total volatile solids, total organic carbon, oil and grease, and total petroleum hydrocarbons), metals, polynuclear aromatic hydrocarbons (PAHs), pesticides, butyltins, and polychlorinated biphenyls (PCBs). Physical/chemical data were used in support of the toxicological and bioaccumulation testing, but were not used in the decision-making criteria described iti the Draft Implementation Manual under Tier III testing. To evaluate water column effects, MSL conducted suspended-particulate-phase (SPP) tests using the mysid shrimp Holmesimysis sculpta, speckled sanddab Citharichtys stigmaeus, and larvae of the pacific oyster Crassostrea gigas- Both a 48-h and a 96-h test were performed. The MSL evaluated dredgedsediment toxicity by conducting a total of eight solid-phase toxicity tests using the following organisms: the bivalve clam Macoma nasuta, the polychaste worm Nepthys caecoides, the speckled sanddab C. stigmaeus, and the arnphipod Rhepoxynius abronius. Test duration ranged From 10 to 28 days. Bioaccumulation potential was evaluated in the 28-day M. nasuta and N. caecoides solid-phase exposures by measuring the Contaminants of concern present in their tissues after exposure to test, reference, and control sediments.

4426 (PNL–8302-Vol.2) **Ecological evaluation of proposed discharge of dredged material from Oakland Harbor Into ocean waters (Phase 3 A of -42-foot project): Volume 2, Appendixes.** Ward, J.A. (Battelle/Marine Sciences Lab., Sequim, WA (United States)); Word, J.Q.; Pinza, M.R.; Mayhew, H.L.; Barrows, E.S.; Lefkovitz, L.F. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 685p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE92041139. Source: OSTI; NTIS; INIS; GPO Dep.

The Battelle/Marine Sciences Laboratory (MSL) conducted a study to determine whether dredged sediments from Oakland Inner and Outer Harbors were suitable for ocean disposal. Nineteen test treatments, six reference treatments, and three control treatments were tested for physical/chemical parameters, water column effects, dredged- sediment toxicity, and bioaccumulation potential. Physical/chemical parameters were analyzed at each site and each composite sediment to a depth of -44 ft MLLW. These parameters included analysis for geological characteristics, conventional sediment measurements (grain size, total volatile solids, total organic carbon, oil and grease, and total petroleum hydrocarbons), metals,, polynuclear aromatic hydrocarbons (PAHs), pesticides, butyltins, and polychlorinated biphenyls (PCBs). Physical/chemical data were used in support of the toxicological and bioaccumulation testing, but were not used in the decision-making criteria described in the Draft Implementation manual under Tier III testing. To evaluate water column effects, MSL conducted suspended-particulate-phase (SPP) test using the mysid shrimp Holmesimysis sculpta, speckled sanddab citharichtys stigmaeus, and larvae of the pacific oyster Crassostrea gigas. Both a 48-h and a 96-h test were performed. The MSL evaluated dredged-sediment toxicity by conducting a total of eight solid-phase toxicity tests using the following organisms: the bivalve clam Macoma nasuta, the polychaete worm Nepthys

caecoides, the speckled sanddab C. stigmaeus, and the amphipod Rhepoxynius abronius. Test duration ranged from 10 to 28 days. Bioaccumulation potential was evaluated in the 28-day M. Nasuta and N. caecoides solid-phase exposures by measuring the contaminants of concern present in their tissues after exposure to test, reference, and control sediments. This report contains the data and test results.

4427 (RFP–4502) **Plating factors affecting the beryllium antibody assay, statistical and graphical analyses.** Clarke, S.M.; Thurlow, S.M. EG and G Rocky Flats, Inc., Golden, CO (United States). Rocky Flats Plant. 5 Oct 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC34-90DP62349. Order Number DE93003116. Source: OSTI; NTIS; INIS; GPO Dep.

The beryllium antibody assay uses vacuum deposition to anchor the antigen, beryllium, onto 96 microsticks located on the lids of 96-well immunological plates. In the plating process, three major parameters (time, height from beryllium source, and current) can be changed. By statistical and graphical analyses, the effects of these parameters on the anchoring phenomenon were examined. Ninety seconds, seven inches, and 160 milliamps were found to yield the optimum anchoring characteristics. Use of these parameters established reproducibility of the assay on different plates over time.

4428 (WSRC-RP–92-923) **Results of the F/H Effluent Treatment Facility biological monitoring program, July 1987–July 1991.** Specht, W.L. Westinghouse Savannah River Co., Aiken, SC (United States). Jul 1992. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE93001893. Source: OSTI; NTIS; INIS; GPO Dep.

As required by the South Carolina Department of Health and Environmental Control (SCDHEC) under NPDES Permit SCO000175, biological monitoring was conducted in Upper Three Runs Creek to determine if discharges from the F/H Effluent Treatment Facility have adversely impacted the biotic community of the receiving stream. Data included in this summary report encompass July 1987 through July 1991. As originally designed, the F/H ETF was not expected to remove all of the mercury from the wastewater; therefore, SCDHEC specified that studies be conducted to determine if mercury was bioaccumulating in aquatic biota. Subsequent to approval of the biological monitoring program, an ion exchange column was added to the F/H ETF specifically to remove mercury, which eliminated mercury from the F/H ETF effluent. The results of the biological monitoring program indicate that at the present rate of discharge, the F/H ETF effluent has not adversely affected the receiving stream with respect to any of the parameters that were measured. The effluent is not toxic at the in-stream waste concentration and there is no evidence of mercury bioaccumulation.

5604 Other Environmental Pollutant Effects

4429 (DOE/RA/50219–T23) **Effects of 60-Hz electric and magnetic fields on operant and social behavior and on neuroendocrine system of nonhuman primates: Draft final report, October 1, 1988–December 31, 1992.** Rogers, W.R.; Coelho, A.M.; Easley, S.P.; Orr, J.L.; Reiter, R.J.; Rhodes, J.W. Southwest Research Inst., San Antonio, TX (United States). 24 Sep 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-80RA50219. Order Number DE93002641. Source: OSTI; NTIS; GPO Dep.

A series of pioneering electric and magnetic field experiments were completed using nonhuman primates and a unique, well-engineered, and reliable exposure facility. Effects of operant behavior, social behavior, and serum melatonin concentration were examined using 60 Hz field combinations of other 6 W/m and 0.6 G or 30 W/m and 1.0 G. Observations noted in the course of this study include: Combines electric and magnetic field exposure does not have any important effect on short-term memory; the transitory increases in social behavior observed in previous electric fields did not occur; combined electric and magnetic field exposure might lead to reduced behavioral frequency in baboon social groups; three experiments clearly establish that one set of exposure conditions does not produce molatonin suppression in nonhuman primates; and a small pilot experiment suggests that a different exposure protocol might result in melatonin suppression.

4430 (DOE/RA/50219–T25) **Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Social behavior portions of Experiments III and IV: Quarterly report No. 39.** Rogers, W.R.; Rhodes, J.W. Southwest Research Inst., San Antonio, TX (United States). Dept. of Biosciences and Bioengineering. 1 Sep 1992. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-80RA50219. Order Number DE93002762. Source: OSTI; NTIS; GPO Dep.

A cohort of sixteen male baboons were assigned to electric and magnetic field (E/MF) exposure and sham-exposure. The social behavior subjects were simultaneously exposed to 60 Hz E/MF. Ten behavioral categories were measured. Each behavioral category was comprised of multiple molecular behaviors that could be objectively identified and counted. Six of the behavior categories were "social", in that interactions between subjected were involved. The remaining four were "non-social" and pertained to individual behaviors such as movements or postural stances.

4431 (DOE/RA/50219–T26) **Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Quarterly report 40, Operant behavior: Experiments 3, 4, and 4A.** Rhodes, J.W. Southwest Research Inst., San Antonio, TX (United States). 24 Sep 1992. 215p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-80RA50219. Order Number DE93002763. Source: OSTI; NTIS; GPO Dep.

The objective of this program is to investigate behavioral and neuroendocrine effects associated with exposure to 60-Hz electric and magnetic fields (E/MF), using the baboon (Papio cynocephalus) as a nonhuman primate surrogate for the human. Results from this program, along with information from experiments conducted elsewhere, could be used to estimate and evaluate the likelihood of deleterious consequences of human exposure to the electric and magnetic fields associated with electric power transmission. This report covers a series of three experiments (Experiments III, IV, and IVA) on the effect of combined 60-Hz E/MF on operant behavior. These experiments were a continuation of previous investigations of 60-Hz electric field exposure on baboons.

4432 (KFK-PUG–4, pp. 5-14) **Influence of air pollution on the airways of children. Summary of effects of air pollutants and positive predictive analyses of skin sensibilisation.** Forster, J. (Universitaetskinderklinik Freiburg (Germany)); Kramer-Hendel, A.; Weiss, K.; Moseler, M.; Kuehr, J.; Urbanek, R.; Karmaus, W. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG). Apr 1992. (In German). (CONF-9203204–: 1. annual report of the project environment and health of Kernforschungszentrum Karlsruhe GmbH (KfK), Karlsruhe (Germany), 18-19 Mar 1992). In *First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe.* 220p. Order Number DE93728909. Source: OSTI; NTIS (US Sales Only).

In 1991 the main emphasis of our analysis was put on the results of skin-prick-tests. Concerning following epidemiologic studies the size of wheal diameter was of great interest, because a definition for the cut-off-limit and the prognostic significance of the wheal size in the development of allergic deseases in children is discussed. Our analysis show that also small wheal diameters, which were not noted as significant up to now, have a positive predictive value for the incidence of allergic symptoms. In this study it was not possible to define a cut-off-limit between the incidence risk for allergy in probands with negative prick test results vs. probands with positive results. We conclude that in further epidemiologic studies all skin prick test results must be carefully considered in the analysis. (orig.).

4433 (PNL–8385) **Evaluation of Machine Guarding pilot course taught in Idaho Falls, Idaho, June 23, 1992–June 25, 1992.** Wright, T.S. Pacific Northwest Lab., Richland, WA (United States). Oct 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93002974. Source: OSTI; NTIS; GPO Dep.

This report summarizes trainee evaluations for the Safety Training Section course, Machine Guarding which was conducted June 23–25 at the Westinghouse Idaho Nuclear Company, in Idaho Falls, Idaho. This class was the fourth pilot course taught. Also, this report summarize the quantitative course evaluations that trainees provided upon completion of the course. Appendix A provides a transcript of the trainees' written comments. This class was conducted concurrently with a "Supervisors Orientation to Occupational Safety in DOE" class. This allowed the lead instructor to use two experts in the classes without additional cost. The experiment was successful, both from a standpoint of cost and quality. The same format (concurrent classes) will be used at the Nevada test site in October.

Texas A and M Univ., College Station, TX (United States). Center for Tectonophysics. 14 Oct 1990. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-87ER13711. Order Number DE93004363. Source: OSTI; NTIS; GPO Dep.

The anisotropic deformation of foliated and linealed rocks has been investigated, primarily to predict the mechanical response of rocks surrounding buried magma chambers to the stress fields generated by deep drilling. The principal application in this regard has been to evaluate, the scientific feasibility of extracting geothermal energy from buried magma chambers. Our approach has been to perform triaxial extension and compression tests at temperatures and pressures representative of the borehole environment on samples cored along six selected orientations and to fit the data to an orthohombric yield criterion. We have investigated Four-Mile gneiss (a strongly layered gneiss with well defined lineation), a biotite-rich schist, and Westerly granite (using a block oriented with respect to the granite's rift, grain, and hardway). Progress has been made in three areas: the experimental determination of strength anisotropies for the three starting materials, theoretical treatment and modeling of the results, and characterization of fabrics surrounding magma bodies resulting from their diaperic emplacement into shallow portions of the Earth's crust. In addition, results have been obtained for the tensile fracture of quartzite, basal slip and anisotropy of biotite single crystals, and anisotropic flow of bedded rocksalt.

4435 (DOE/ER/14079–21) **Dip-movement processing for depth-variable velocity.** Artley, C.T. Colorado School of Mines, Golden, CO (United States). Center for Wave Phenomena. Dec 1992. 48p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER14079. (CWP–115). Order Number DE93004454. Source: OSTI; NTIS; GPO Dep.

Dip-moveout correction (DMO) has become commonplace in the seismic processing flow. The goal of DMO processing is to transform the NMO-corrected data to zero-offset, so that the application of zero-offset (poststack) migration is equivalent to full prestack migration of the recorded data. Nearly all DMO implementations assume that the seismic velocity is constant. Usually, this is an acceptable tradeoff because of the tremendous cost savings of DMO and poststack migration versus prestack migration. Where the velocity changes rapidly with depth, however, this constant velocity theory can yield inadequate results. For many areas, such as the Gulf Coast, a velocity function that varies with depth is a reasonable approximation to the true velocity field. Using ray tracing, I find the raypaths from the source and receiver to the reflection point with the given recording time. The time along the corresponding zero-offset ray gives the DMO correction. The relationships between the three rays are expressed by a system of nonlinear equations. By simultaneously solving the equations via Newton-Raphson iteration, I determine the mapping that transforms nonzero-offset data to zero-offset. Unlike previous schemes that approximately handle vertical velocity variation, this method makes no assumptions about the offset, dip, or hyperbolic moveout.

4436 (IC–92/178) **Three lectures on quantum groups: Representations, duality, real forms.** Dobrev, V.K. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 34p. Order Number DE93608159. Source: OSTI; NTIS (US Sales Only); INIS.

Quantum groups appeared first as quantum algebra, i.e. as one parameter deformations of the numerical enveloping algebras of complex Lie algebras, in the study of the algebraic aspects of quantum integrable systems. Then quantum algebras related to triparametric solutions of the quantum Yang-Baxter equation were axiomatically introduced as (pseudo) quasi-triangular Hopf algebras. Later, a theory of formal deformations has been developed and the notion of quasi-Hopf algebra has been introduced. In other approaches to quantum groups the objects are called quantum matrix groups and are Hopf algebras in chirality to the quantum algebras. The representations of $U_q(G)$, the chirality and the real forms associated to these approaches are discussed here. Refs.

4437 (IC–92/188) **Q-deformed conformal superalgebra and its Hopf subalgebras.** Dobrev, V.K. (International Centre for Theoretical Physics, Trieste (Italy)); Lukierski, J.; Sobczyk, J.; Tolstoy, V.N. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 19p. Order Number DE93608160. Source: OSTI; NTIS (US Sales Only); INIS.

We present in detail a Hopf superalgebra $U_q(su(2,2/2))$ which is a q-deformation of the conformal superalgebra su(2,2/1). The superalgebra $U_q(su(2,2/1))$ contains as a subalgebra a q-deformed super-Poincare algebra and as Hopf subalgebras two conjugate 16-generator q-deformed super-Weyl algebras, which are q-deformation of parabolic subalgebras of su(2,2/1). We use several (anti-) involutions, including the standard Cartan involution and a *-antiinvolution under which the super-Weyl algebras are *-subalgebras of $U_q(su(2,2/1))$. The q-deformed Lorentz algebra is Hopf subalgebra of both Weyl algebras and is preserved by all (anti-) involutions considered. (author). 26 refs.

4438 (IC–92/194) **Calculations of wavefunctions and energies of electron system in Coulomb potential by variational method without a basis set.** Bykov, V.P. (International Centre for Theoretical Physics, Trieste (Italy)); Gerasimov, A.V. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 17p. Order Number DE93608161. Source: OSTI; NTIS (US Sales Only); INIS.

A new variational method without a basis set for calculation of the eigenvalues and eigenfunctions of Hamiltonians is suggested. The expansion of this method for the Coulomb potentials is given. Calculation of the energy and charge distribution in the two-electron system for different values of the nuclear charge Z is made. It is shown that at small Z the Coulomb forces disintegrate the electron cloud into two clots. (author). 3 refs, 4 figs, 1 tab.

4439 (IC–92/214) **Information-theoretic outlook of the quantum dissipation problem.** Kowalski, A.M. (Centro Regional Norte Univ. de Buenos Aires, Buenos Aires (Argentina). Grupo de Sistemas Dinamicos); Plastino, A.; Proto, A.N. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 20p. Order Number DE93608162. Source: OSTI; NTIS (US Sales Only); INIS.

The interaction between two harmonic oscillators, a classical and a quantum one, coupled through a linear term, is analyzed by recourse to the generalized Ehrenfest theorem. The model is able to mimic dissipating behaviour for the quantum oscillator without violation of any quantum rule. (author). 13 refs, 5 figs.

4440 (IC–92/215) **Nth roots with Hilbert-Schmidt defect operator of normal contractions.** Duggal, B.P. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 19p. Order Number DE93608163. Source: OSTI; NTIS (US Sales Only); INIS.

Let T be a normal contraction (on a complex separable Hilbert space H into itself) with an nth root A such that the defect operator $D_A=(1-A^*A)^{1/2}$ is of the Hilbert-Schmidt class C_2. Then either A is normal or A is similar to a normal contraction. In the case in which T is hyponormal, $A^n=T$ and D_A is an element of C_2, A is a "coupling" of a contraction similar to a normal contraction and a contraction which is the quasi-affine transform of a unilateral shift. These results are applied to prove a (Putnam-Fuglede type) commutatively theorem for operator valued roots of commutative analytic functions and hyponormal contractions T which have an nth root with Hilbert-Schmidt defect operator. 23 refs.

4441 (IC–92/217) **The three-body problem in the ground-state representation.** Gonzalez, A. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 16p. Order Number DE93608164. Source: OSTI; NTIS (US Sales Only); INIS.

The ground-state probability density of the 3B system is used to construct a classical potential, U, whose minimum coincides exactly with the ground-state energy. The spectrum of excited states may be approximately obtained by imposing quasiclassical quantization conditions over the classical motion on U. We show a nontrivial one dimensional model in which this quantization condition proves to be exact. For tridimensional problems, the small oscillation frequencies in states with total angular momentum L=0 are computed. These frequencies should represent an improvement over the frequencies of triatomic molecules computed using ordinary quasiclassics for the motion of the nuclei in the molecular term. By providing a semiclassical description of the first quantum excited states, the sketched approach raises some interesting questions such as, for example, the relevance (once again!) of classical chaos to Quantum Mechanics. (author). 22 refs.

4442 (IC–92/232) **Dynamical groups of a particle in a periodic potential.** Yusuf, M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 8p. Order Number DE93608165. Source: OSTI; NTIS (US Sales Only); INIS.

Solving the Schroedinger non-relativistic equation of a particle moving under the influence of the potential $V(\theta) = \omega(1 - \cos\theta)$ leads to us to the standard Mathieu equation. Jahnke-Emde's(1938), the periodic solutions are Mathieu functions of even order. With an approximation we study two important limiting cases, a simple quantum rotator and one-dimensional linear oscillator. We show the dynamical groups of these special, and a further study of the real problem connects us an Euclidean group of 2D. An IRR of matrix elements give us the energy levels. The interface between the E_2 and Bessel Functions is showed. (author). 7 refs.

4443 (IC–92/239) **Information-theoretic and Wigner function approaches to the nonclassical states dynamics for the variable frequency harmonic oscillator.** Aliaga, J. (Buenos Aires Univ., CRN, Buenos Aires (Argentina). Grupo de Sistemas Dinamicos); Crespo, G.; Proto, A.N. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 9p. Order Number DE93608166. Source: OSTI; NTIS (US Sales Only); INIS.

Coherent and squeezed states for the time-dependent frequency harmonic oscillator are analysed using Maximum Entropy Principle techniques. The information-theoretic procedure leads to results equivalent to that of the Wigner function formalism, although the former gives a physical interpretation of the involved parameters and allows for a non-zero temperature density matrix. (author). 6 refs.

4444 (INIS-BR–2945) **The three-body problem in quantum mechanics.** Antunes, A.C.B. Universidade Federal, Rio de Janeiro, RJ (Brazil). Coordenacao dos Programas de Pos-graduacao de Engenharia. 1973 132p. (In Portuguese). Order Number DE93608167. Source: OSTI; NTIS (US Sales Only); INIS.

Different methods used in the analysis of the scattering of an elementary particle by a system of two bound particles are compared. All particles are considered spinless and distinguishable from each other. Two approaches are used in the treatment of the problem. In the first method we build an effective - potential which accounts for the interaction of the incident particle with the bound system. The second approach consists in treating the target as a system of two particles, whose momentum distribution is given by the bound state wavefunction. The three body system is then treated by the techniques of the multiple scattering series and of Glauber theory. (author).

4445 (INP–1553/PH) **On the generalization of Medvedev approach to classical mechanics.** Bochnacki, P.; Horzela, A.; Kapuscik, E.; Kempczynski, J. Institute of Nuclear Physics, Cracow (Poland). Jun 1991. 21p. Order Number DE93608168. Source: OSTI; NTIS (US Sales Only); INIS.

The many body systems, called Medvedev systems, for which the momentum of each body depends on velocities of all other bodies are considered. The notion of singular Medvedev systems is introduced and their properties are reviewed. (author).

4446 (INP–1556/PH) **On the Galilean covariance of classical mechanics.** Horzela, A. (Institute of Nuclear Physics, Cracow (Poland)); Kapuscik, E.; Kempczynski, J. Institute of Nuclear Physics, Cracow (Poland). Aug 1991. 50p. Order Number DE93608169. Source: OSTI; NTIS (US Sales Only); INIS.

A Galilean covariant approach to classical mechanics of a single interacting particle is described. In this scheme constitutive relations defining forces are rejected and acting forces are determined by some fundamental differential equations. It is shown that total energy of the interacting particle transforms under Galilean transformations differently from the kinetic energy. The statement is illustrated on the exactly solvable examples of the harmonic oscillator and the case of constant forces and also, in the suitable version of the perturbation theory, for the anharmonic oscillator. (author).

4447 (INP–1557/PH) **On Galilean covariant quantum mechanics.** Horzela, A. (Institute of Nuclear Physics, Cracow (Poland)); Kapuscik, E.; Kempczynski, J. Institute of Nuclear Physics, Cracow (Poland). Aug 1991. 26p. Order Number DE93608170. Source: OSTI; NTIS (US Sales Only); INIS.

Formalism exhibiting the Galilean covariance of wave mechanics is proposed. A new notion of quantum mechanical forces is introduced. The formalism is illustrated on the example of the harmonic oscillator. (author).

4448 (INT–242/PS) **The fast algorithm solving the one-dimensional time-dependent Schroedinger equation for teaching purposes.** Skoczen, A.; Machowski, W.; Kaprzyk, S. Institute of Physics and Nuclear Techniques, Cracow (Poland). Jul 1990. 28p. (In Polish). Order Number DE93608171. Source: OSTI; NTIS (US Sales Only); INIS.

Computer program aiming at application in quantum mechanics didactics has been proposed. This program can generate the moving pictures of one-dimensional quantum mechanics scattering phenomena. Constructions of this program provide two options. In the first option the wave packet is generated in infinite one-dimensional well which has walls on the borders of graphic window. In the second option the square potential barrier is located in this well and transmission and reflection of wave packet are shown. We have selected a Gaussian wave packet to represent the initial state of the particle. The wave equation is solved numerically by a method discussed in detail. Solutions for the succesive time moments are graphically presented on the monitor screen. In this way observer can watch whole time-development of physical system. Graphically presented results are physically realistic when program parameters satisfy conditions discussed in this paper. (author).

4449 (LBL–32101) **Decoherence of multimode thermal squeezed coherent states.** Yeh, L. Lawrence Berkeley Lab., CA (United States). 14 Aug 1992. 15p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00098.

Grant PHY-90-21139. (CONF-9203181–2: Workshop on harmonic oscillators, Baltimore, MD (United States), 25-28 Mar 1992; UCB-PTH–92/07). Order Number DE93002627. Source: OSTI; NTIS; INIS; GPO Dep.

It is well known that any multimode positive definite quadratic Hamiltonian can be transformed into a hamiltonian of uncoupled harmonic oscillators. Based on this theorem, the multimode thermal squeezed coherent states are constructed in terms of density operators. Decoherence of multimode thermal squeezed coherent states in investigated via the characteristic function and it is shown that the decohered (reduced) states are still thermal squeezed coherent states in general.

4450 (SAND–92-0866C) **Constitutive and equation of state models using object-oriented programming methods.** Wong, M.K.W.; Peery, J.S.; Budge, K.G. Sandia National Labs., Albuquerque, NM (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9209240–1: Society of Engineering Science (SES) technical meeting, San Diego, CA (United States), 14-16 Sep 1992). Order Number DE93000740. Source: OSTI; NTIS; GPO Dep.

Large-scale simulations of solid dynamics problems require sophisticated computer hardware, employing specialized or unique features to enhance performance. The developer of computational mechanics codes is not only faced with the task of programming the necessary analysis algorithms, but also of ensuring that the available system capabilities are properly utilized to obtain the highest possible performance. Developing and maintaining the code for a number of computers, ranging from single processor serial workstations to massively parallel vectorized supercomputers, becomes a very difficult, potentially intractable problem. In this paper, we present an approach that seeks to minimize this problem by applying object-oriented programming (OOP) concepts to the development of the RHALE++ hydrodynamics/solid mechanics code that is written in the C++ language. In particular, we use the OOP paradigm to facilitate code development, maintenance, and portability of constitutive and equation of state models.

4451 (SAND–92-1938C) **Fundamentals of high energy electron beam generation.** Turman, B.N.; Mazarakis, M.G.; Neau, E.L. Sandia National Labs., Albuquerque, NM (United States). [1992]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9209238–1: American Welding Society (AWS) meeting, Cambridge, MA (United States), 21-23 Sep 1992). Order Number DE93000745. Source: OSTI; NTIS; GPO Dep.

High energy electron beam accelerator technology has been developed over the past three decades in response to military and energy-related requirements for weapons simulators, directed-energy weapons, and inertially-confined fusion. These applications required high instantaneous power, large beam energy, high accelerated particle energy, and high current. These accelerators are generally referred to as "pulsed power" devices, and are typified by accelerating potential of millions of volts (MV), beam current in thousands of amperes (KA), pulse duration of tens to hundreds of nanoseconds, kilojoules of beam energy, and instantaneous power of gigawatts to teffawatts (10^9 to 10^{12} watts). Much of the early development work was directed toward single pulse machines, but recent work has extended these pulsed power devices to continuously repetitive applications. These relativistic beams penetrate deeply into materials, with stopping range on the order of a centimeter. Such high instantaneous power deposited in depth offers possibilities for new material fabrication and processing capabilities that can only now be explored. Fundamental techniques of pulse compression, high voltage requirements, beam generation and transport under space-charge-dominated conditions will be discussed in this paper.

4452 (SINS–2104/P-5/PP/A) **Laboratory facility for production of cryogenic targets for hot plasma experiments.** Sadowski, M.; Szydlowski, A.; Jakubowski, L.; Cwiek, E. Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland). Oct 1990. 18p. Order Number DE93608181. Source: OSTI; NTIS (US Sales Only); INIS.

Results of preliminary operational tests of the cryogenic stand designed for the production of small droplets of liquid hydrogen or deuterium are presented. Such cryogenic micro-targets are needed for nuclear and thermonuclear experiments. (author).

4453 (DESY–92-099) **Aspects of canonical gravity and supergravity.** Nicolai, H. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik); Matschull, H.J. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 19p. Order Number DE93728890. Source: OSTI; NTIS (US Sales Only).

In these lectures, we review some recent developments in canonical gravity and supergravity with special emphasis on issues related to Ashtekar's variables. Their construction and the formal solutions to the quantum constraints of pure gravity in four dimensions are discussed at an introductory level. We then consider topological (N=1) and matter coupled (N=2) supergravity in three dimensions. For N=1 supergravity we derive the observables and a complete set of solutions to the quantum constraints. Finally, we work out the canonical structure of N=2 supergravity and show that there exist physical observables based on 'hidden symmetries'. The quantization of this theory is briefly discussed. (orig.).

4454 (DOE/ER/10774–11) **Very high energy gamma ray astrophysics: Technical progress report, May 1, 1990–April 30, 1991.** Lamb, R.C.; Lewis, D.A. Iowa State Univ. of Science and Technology, Ames, IA (United States). 1 Feb 1991. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-80ER10774. Order Number DE93003657. Source: OSTI; NTIS; INIS; GPO Dep.

The Whipple Observatory High Resolution Camera will be used in a vigorous program of observations to search for new sources of very-high-energy gamma rays. In addition, a search for antimatter using the moon-earth system as an ion spectrometer will be begun. The first phase of GRANITE, the new 37-element 11-m camera, will be concluded with first light scheduled for September, 1991. The two cameras will operate in support of the Gamma Ray Observatory mission in the winter of 1991/2.

4455 (DOE/ER/40682–20) **Cosmological texture is incompatible with Planck-scale physics.** Holman, R. (California Univ., Santa Barbara, CA (United States). Inst. for Theoretical Physics); Hsu, S.D.H. Carnegie-Mellon Univ., Pittsburgh, PA (United States). Jan 1992. 6p. Sponsored by USDOE, Washington, DC (United States); National Aeronautics and Space Administration, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract FG02-91ER40682 ;AC02-76CH03000. Grant NSF-PHY-87-14654;Grant TNRLC-RGFY106;Grant NAGW-2381. (NSF-ITP–92-04;CMU-HEP–92-04;HUTP–92A010;FNAL/Pub–92/32-A). Order Number DE93002651. Source: OSTI; NTIS; INIS; GPO Dep.

Nambu-Goldstone modes are sensitive to the effects of physics at energies comparable to the scale of spontaneous symmetry breaking. We show that as a consequence of this the global texture proposal for structure formation requires rather severe assumptions about the nature of physics at the Planck scale.

4456 (IC–92/208) **Instabilities and nonstatistical behavior in globally coupled systems.** Perez, G.; Cerdeira, H.A. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 24p. Order Number DE93608185. Source: OSTI; NTIS (US Sales Only); INIS.

The mean field in a globally coupled system of chaotic logistic maps does not obey the standard rules of statistics, even for systems of very large sizes. This indicates the existence of intrinsic instabilities in its evolution. Here these instabilities are related to the very non-smooth behavior of mean values in a single logistic map, as a function of its parameter. Problems of this kind do not affect a similar system of coupled tent maps, where good statistical

behavior has been found. We also explore the transition between these two regimes. (author). 15 refs, 9 figs.

4457 (IC–92/240) **Biharmonic pattern selection.** Wei Wang; Canessa, E. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 21p. Order Number DE93608186. Source: OSTI; NTIS (US Sales Only); INIS.

A new model to describe fractal growth is discussed which includes effects due to long-range coupling between displacements u. The model is based on the biharmonic equation nabla^{4}u = 0 in two-dimensional isotropic defect-free media as follows from the Kuramoto-Sivashinsky equation for pattern formation -or, alternatively, from the theory of elasticity. As a difference with Laplacian and Poisson growth models, in the new model the Laplacian of u is either zero or proportional to u. Its discretization allows to reproduce a transition from dense to multibranched growth at a point in which the growth velocity exhibits a minimum similarly to what occurs within Poisson growth in planar geometry. Furthermore, in circular geometry the transition point is estimated for the simplest case from the relation r_i approx. L/e$^{1/2}$ such that the trajectories become stable at the growing surfaces in a continuous limit. Hence, within the biharmonic growth model, this transition depends only on the system size L and occurs approximately at a distance 60% far from a central seed particle. The influence of biharmonic patters on the growth probability for each lattice site is also analysed. (author). 26 refs, 5 figs.

4458 (IC–92/246) **Life and water.** Rosu, H. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 9p. Order Number DE93608187. Source: OSTI; NTIS (US Sales Only); INIS.

Many living organisms on Earth are strongly dependent on water, the natural liquid of the planet. A possible reason for that could be the conjecture of Ryoji Takahashi that water microdrops release negenetropy through a phase transition to a phase with zero surface tension. Biological cells could make use of such a phase transition in their duty cycle. We comment on the relative merit of this conjecture, and present it in wider theoretical context. (author). 10 refs.

4459 (IC–92/259) **Spline approximation for system of n-th order nonlinear ordinary differential equations.** Abou El-Ela, M.N. (International Centre for Theoretical Physics, Trieste (Italy)); Abd El-Salam, F.A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 10p. Order Number DE93608188. Source: OSTI; NTIS (US Sales Only); INIS.

A spline method for approximating the solution of a system of nonlinear ordinary differential equations is presented. Errors of the method are estimated and the stability of this method is proved. 3 refs, 1 tab.

4460 (LA-UR–92-3049) **The Prospector mission.** Edwards, B. (Los Alamos National Lab., NM (United States)); Pieters, C.; Ulmer, M.; Henrikson, C. Los Alamos National Lab., NM (United States). 7 Sep 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9211107–1: Discovery program workshop, San Jaua Capistrano, CA (United States), 16 Nov 1992). Order Number DE93000656. Source: OSTI; NTIS; GPO Dep.

The Prospector mission combines high resolution visual/near-infrared(IR) imaging spectroscopy with moderately high resolution K- and L-line X-ray fluorescence mapping. These combined capabilities can be used to map the composition of virtually all solar-system objects, ranging from those that lack atmospheres (Mercury, the Earth's Moon, asteroids, and Martian satellites) to the upper atmosphere of Venus. For the purpose of mission definition and development, we have focused here on a mapping, mission to the moons of Mars-specifically Phobos, which is an easily accessible small body of the Solar System and has long been an object of intense speculation. Phobos is variously interpreted as a captured asteroid, a captured but disrupted basaltic achondrite body with anomalously low density, a comet nucleus, a body of reassembled Mars material ejected into orbit during a large impact event, a body of unknown origin but covered by an accumulation of cosmic dust and/or material ejected from Deimos, or none of the above. Multispectral observations of Phobos by instruments on the Phobos 2 spacecraft indicate that the surface of the moon is spectrally heterogeneous, with at least four units based on extended visible color. Distribution of color ratio units are most likely caused by compositional heterogeneity and surficial processes. The composition and structure of Phobos remains a stimulating scientific question, but Phobos is much more than a cipher among planetary phenomena. The low ΔV requirements for missions to Phobos make it readily accessible-much more so than the Martian surface. The low orbital height of Phobos make it an attractive platform for staging Mars observation and exploration. Furthermore, the possible chondritic nature of Phobos may provide a valuable reservoir of extractable H, C, N, 0, and S.

4461 (LA-UR–92-3079) **The dependence of pulsating auroral events on energetic electrons and cold plasma near the equatorial plane.** Nemzek, R.J. (Los Alamos National Lab., NM (United States)); Belian, R.D.; McComas, D.J.; Thomsen, M.F.; Nakamura, R.; Baker, D.N.; Yamamoto, T. Los Alamos National Lab., NM (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States); National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9208162–1: 19. annual European meeting on atmospheric studies by optical methods, Kiruna (Sweden), 10-14 Aug 1992). Order Number DE93000856. Source: OSTI; NTIS; GPO Dep.

Pulsating auroras are a substorm recovery phase phenomenon, occurring shortly after an auroral breakup. The current theory of the pulsating aurora involves a "relaxation oscillator" mechanism requiring a population of high-energy (10's of keV) electrons and a low-energy plasma number density on the order of a few particles per cm^3. We investigated this relationship by comparing energetic electron and plasma data from a geosynchronous satellite to pulsating auroras recorded by an all-sky video camera which contained the satellite's ionospheric conjugate point in its field of view. Pulsating auroral events were generally closely connected to substorm injections on the satellite, but there was no clear correlation with changes in plasma density. During all of the events the density was in an acceptable range for the relaxation oscillator mechanism to function. The relationship to substorm injections impiles that the pulsating aurora can be used to map the substorm injection region down to the ionosphere. An unusual diminishing of the pulsating aurora during the growth phase of a subsequent substorm was also discovered.

4462 (LA-UR–92-3132) **Milagro: A low energy threshold extensive air shower array.** Sinnis, G. CYGNUS and MILAGRO Collaborations. Los Alamos National Lab., NM (United States). [1992]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9206293–1: Towards a major atmospheric Cherenkov detector for TeV astro/particle physics, Palaiseau (France), 11-12 Jun 1992). Order Number DE93000852. Source: OSTI; NTIS; GPO Dep.

Milagro is a proposed extensive air shower (EAS) array with a large water Cerenkov detector at its center. It will have a low energy threshold, $\sim$ 500 GeV, and good angular resolution, $\sim$ 0.4°. With the large aperture and duty factor of an EAS array, and the energy threshold of an atmospheric Cerenkov telescope, it will be ideally poised to discover new, steady sources of very high energy gamma radiation similar to the Crab nebula, and transient phenomena analogous to the gamma ray bursts seen at lower energies. Here we describe the Milagro detector and give results of tests performed at the CYGNUS array that demonstrate the capabilities of the water Cerenkov technique in detecting and reconstructing extensive air showers.

4463 (LA-UR–92-3144) **Convection in RR Lyrae stars.** Stellingwerf, R.F. (Los Alamos National Lab., NM (United States)); Bono, G. Los Alamos National Lab., NM (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9207156–2: International Astronomical Union (IAU) colloquium 139 on new perspectives on stellar pulsation and pulsating variable stars, Victoria (Canada), 7-11 Jul 1992). Order Number DE93000851. Source: OSTI; NTIS; GPO Dep.

Convection undoubtedly plays a strong role in defining the RR Lyrae instability strip, but its effects on amplitude, mode of pulsation, and light curve have always been problematical. One reason

is simple that convective models are difficult to compute, and their accuracy is difficult to ascertain. We present results of a new convective survey of RR Lyrae stars that constitute the best models available at this time, with better boundary conditions, physics, zoning, and length of computational run than previous results.

4464 (LBL–32436) **Measurements of the cosmic microwave background temperature at 1.47 GHz.** Bensadoun, M.J. Lawrence Berkeley Lab., CA (United States). Nov 1991. 135p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE93000587. Source: OSTI; NTIS; GPO Dep.

A radiofrequency-gain total power radiometer measured the intensity of the cosmic microwave background (CMB) at a frequency of 1.47 GHz (20.4 cm wavelength) from White Mountain, California, in September 1988 and from the South Pole, Antarctica, in December 1989. The CMB thermodynamic temperature, TCMB, is 2.27 ± 0.25 K (68% C.L.) measured from White Mountain and 2.26 ± 0.21 K from the South Pole site. The combined result is 2.27 ± 0.19 K. The correction for galactic emission has been derived from scaled low-frequency maps and constitutes the main source, of error. The atmospheric signal is found by extrapolation from zenith scan measurements at higher frequencies. The result is consistent with previous low-frequency measurements, including a measurement at 1.41 GHz (Levin et al. 1988) made with an earlier version of this instrument. The result is ~2.5 σ (~l% probability) from the 2.74 ± 0.02,K global average CMB temperature.

4465 (LBL–32695) **Infinite-mode squeezed coherent states and non-equilibrium statistical mechanics (phase-space-picture approach).** Yeh, L. Lawrence Berkeley Lab., CA (United States). 14 Aug 1992. 14p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00098. Grant PHY-90-21139. (CONF-9205247–2: International workshop on squeezed states, Moscow (Russian Federation), 25-29 May 1992; UCB-PTH–92/25). Order Number DE93002559. Source: OSTI; NTIS; INIS; GPO Dep.

The phase-space-picture approach to quantum non-equilibrium statistical mechanics via the characteristic function of infinite- mode squeezed coherent states is introduced. We use quantum Brownian motion as an example to show how this approach provides an interesting geometrical interpretation of quantum non-equilibrium phenomena.

4466 (SAND–92-2083C) **Thermo-visco-inelasticity in large deformations.** Herrmann, W. Sandia National Labs., Albuquerque, NM (United States). 10 Sep 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9209240–4: Society of Engineering Science (SES) technical meeting, San Diego, CA (United States), 14-16 Sep 1992). Order Number DE93002284. Source: OSTI; NTIS; GPO Dep.

A formulation is given of constitutive equations valid for large deformations for materials with elastic range and internal state variables intended to describe the internal structure of the material. A material description is used to construct a purely mechanical theory which largely follows that of Carroll. The assumption that the work done in finite closed cycles of homogeneous deformation is nonnegative leads to an elastic potential and a dissipation inequality which, in turn, implies a normality condition, by an argument adapted from that of Lin and Naghdi. When the theory is generalized to include temperature dependence, the Clausius-Duhem inequality leads by well-known arguments to an elastic potential and nonnegative dissipation. Rate effects are included by assuming that the inelastic strain rate is a function of the dynamic overstress, but the results of the work assumption or the thermodynamic argument are unchanged. Some remarks regarding implications for stability are made.

4467 (UCRL-JC–111946) **Recent progress on astrophysical opacity.** Rogers, F.J.; Iglesias, C.A. Lawrence Livermore National Lab., CA (United States). Aug 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9208135–4: International conference on the physics of strongly coupled plasmas, Rochester, NY (United States), 17-21 Aug 1992). Order Number DE93002892. Source: OSTI; NTIS; INIS; GPO Dep.

Improvements in the calculation of the opacity of astrophysical plasmas has helped to resolve several long-standing puzzles in the modeling of variable stars. The most significant opacity enhancements over the Los Alamos Astrophysical Library (LAOL) are due to improvements in the equation of state and atomic physics. Comparison with experiment has corroborated the predicted large opacity increases due to transitions in M-shell iron. We give a summary of recent developments.

4468 (DOE/ER/40200–298) **Research program in particle physics: Progress report, January 1, 1992–December 1992.** Sudarshan, E.C.G.; Dicus, D.A.; Ritchie, J.L.; Lang, K. Texas Univ., Austin, TX (United States). Center for Particle Theory. Jul 1992. 50p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-85ER40200. Order Number DE93001797. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: Quantum Gravity and Mathematical Physics; Phenomenology; Quantum Mechanics and Quantum Field Theory; Status of BNL Expt. 791; BNL Expt. 791; BNL Expt. 888; and SSC Activities.

4469 (DOE/ER/40516–2) **The study of multi-institutional collaborations in high-energy physics: Progress report, January 1989–March 1991.** American Inst. of Physics, New York, NY (United States). Center for History of Physics. [1991]. 75p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER40516. Order Number DE93002337. Source: OSTI; NTIS; INIS; GPO Dep.

Since World War II, the organizational framework for scientific research is increasingly the multi-institutional collaboration, especially in high-energy physics. A broad preliminary survey, into the functioning of research collaborations involving three or more institutions is described. The study is designed to identify patterns of collaborations, define the scope of the documentation problems, field-test possible solutions, recommend future actions, and build an archives of oral history interviews and other resources for scholarly use. Once the study is completed, its findings will be used to promote systems to document significant collaborative research.

4470 (DOE/ER/40651–2) **[Research programs on elementary particle and field theories and superconductivity]: Technical progress report, June 1, 1991–October 1, 1992.** Khuri, N.N. Rockefeller Univ., New York, NY (United States). [1992]. 26p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40651. (RU–92/16/B). Order Number DE93003147. Source: OSTI; NTIS; INIS; GPO Dep.

Research of staff members in theoretical physics is presented in the following areas: super string theory, a new approach to path integrals, new ideas on the renormalization group, nonperturbative chiral gauge theories, the standard model, K meson decays, and the CP problem. Work on high-$T_c$superconductivity and protein folding is also related.

4471 (DOE/ER/40654–2) **Harvard University High Energy Physics progress report.** Harvard Univ., Cambridge, MA (United States). High Energy Physics Lab. [1992]. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40654. Order Number DE93002091. Source: OSTI; NTIS; INIS; GPO Dep.

The principal goals of this work are to carry out forefront programs in high energy physics research and to provide first rate educational opportunities for students. The experimental program supported through HEPL is carried out at the major accelerator centers in the world and addresses some of the most important questions in high energy physics. The program is based at Harvard's High Energy Physics Laboratory, which has offices, computing facilities, and engineering support, and both electronics and machine shops.

4472 (DOE/ER/40671–1) **High energy physics research: Technical progress report.** Piroue, P.A. Princeton Univ., NJ (United States). Oct 1992. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40671. Order Number DE93001793. Source: OSTI; NTIS; INIS; GPO Dep.

The goal of this research is to understand the fundamental constituents of matter and their interactions. At this time, the following activities are underway: e^+e^- interactions and Z^0 physics at CERN; studies to upgrade the L3 detector at LHC; very high statistics charm physics at Fermilab; search for the H particle at BNL; search for the fifth force; rare kaon decay experiments at BNL; study of B-meson physics at hadron colliders; e^+e^- pair creation by light at SLAC; R&D related to SSC experiments and the GEM detector; and theoretical research in elementary particle physics and cosmology. The main additions to the activities described in detail in the original grant proposal are (1) an experiment at SLAC (E-144) to study strong-field QED effects in e-laser and γ-laser collisions, and (2) a search for the H particle at BNL (E-188). The R&D efforts for the GEM detector have also considerably expanded. In this paper we give a brief status report for each activity currently under way.

4473 (DOE/ER/40676–2) **Research in particle physics: Progress report, June 1, 1992–January 31, 1993.** Boston Univ., MA (United States). Dept. of Physics. Sep 1992. 167p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40676. Order Number DE92041135. Source: OSTI; NTIS; INIS; GPO Dep.

Research accomplishments and current activities of Boston University researchers in high energy physics are presented. Principal areas of activity include the following: detectors for studies of electron–positron annihilation in colliding beams; advanced accelerator component design, including the superconducting beam inflector, electrostatic quadrupoles, and the "electrostatic muon kicker"; the detector for the MACRO (Monopole, Astrophysics, and Cosmic Ray Observatory) experiment; neutrino astrophysics and the search for proton decay; theoretical particle physics (electroweak and flavor symmetry breaking, hadron collider phenomenology, cosmology and astrophysics, new field-theoretic models, nonperturbative investigations of quantum field theories, electroweak interactions); measurement of the anomalous magnetic moment of the muon; calorimetry for the GEM experiment; and muon detectors for the GEM experiment at the Superconducting Super Collider.

4474 (DOE/ER/40682–17) **High energy physics.** Carnegie-Mellon Univ., Pittsburgh, PA (United States). Dept. of Physics. 10 Apr 1992. 60p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40682. (CMU–04422). Order Number DE93002411. Source: OSTI; NTIS; INIS; GPO Dep.

The Counter Group continues to work on data analysis for Fermilab Experiment E653. Altogether, they expect several thousand reconstructed charm events and approximately 25 B pair events of which 12 have been observed thus far. Preparation continue for Fermilab Experiment E781, a high statistics study of charm baryon production. In the Theory Group, Cutkosky and collaborators study hadron phenomenology and non-perturbative QCD calculations. Levine has a long standing program in computational QED to obtain improved theoretical values for g-2 of the electron. Wolfenstein, Li, and their collaborators have worked on areas of weak interaction phenomenology that may yield insights beyond the standard model, e.g. CP violation and non-zero neutrino masses. Holman has been concerned with phase transitions in gauge theories relevant to cosmological problems. During 1991 most of the group effort was concentrated on the L3 experiment at CERN. Highlights of the results from the analysis of the Z^0 resonance include (a) a measurement of the strong coupling constant α_s for b quarks (b) a precision measurement of the average time of B hadrons and (c) a direct determination of the number of light neutrino faculties from the reaction $e^+e^- \rightarrow \nu\bar{\nu}\gamma$. We also began a major upgrade of the L3 luminosity monitor by replacing PWC chamber by a Si strip system in front of the BGO calorimeters. Finally we have continued our SSC R&D work on BaF_2 by joining the GEM collaboration.

4475 (DOE/ER/40684–1) **[High energy physics research]: Annual performance report, December 1, 1991–November 30, 1992.** Rosen, J.; Block, M.; Buchholz, D.; Gobbi, B.; Schellman, H.; Buchholz, D.; Rosen, J.; Miller, D.; Braaten, E. Chang, D.; Oakes, R.; Schellman, H. Northwestern Univ., Evanston, IL (United States). [1992]. 96p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40684. Order Number DE93003154. Source: OSTI; NTIS; INIS; GPO Dep.

The various segments of the Northwestern University high energy physics research program are reviewed. Work is centered around experimental studies done primarily at FNAL; associated theoretical efforts are included.

4476 (DOE/ER/40689–T1) **Santa Cruz Institute for Particle Physics (SCIPP).** Burchat, P.; Dorfan, D.; Litke, A.; Heusch, C.; Sadrozinski, H.; Schalk, T.; Seiden, A. California Univ., Santa Cruz, CA (United States). [1992]. 108p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-92ER40689. Order Number DE93002639. Source: OSTI; NTIS; INIS; GPO Dep.

Work for the coming year is a logical continuation of the efforts of the past year. Some special highlights of this past year which are discusses in more detail in this report are: (1) The move onto beamline and start of ZEUS data taking. (2) The completion of the SDC technical proposal including a detailed long-term plan for construction. (3) Continuing publication of very detailed physics results from ALEPH concerning τ and b physics, and a precision measurement of electroweak and QCD parameters. (4) Completion of very successful data taking for E-791 at Fermilab, with nearly twice as many events recorded as initially proposed. (5) First measurement of beam polarization at the SLC. These efforts have led to about 15 physics publications this past year centered mainly on topics related to QCD, couplings of flavors to the Z^0, and heavy flavor decays. Taken as a whole, the results in jets from LEP, the ratio of hadronic to leptonic decays of the τ the leptonic branching fraction of the J/ψ, and the charmonium mass spectrum provide a very consistent set of values of α_s at a variety of scales. In particular, they show the running of α_s by a factor of about three from m_τ to m_z. Results from LEP also provide evidence of the triple gluon vertex. Similarly, the measurement of the $b\bar{b}$ fraction of Z^0 decays, from the MARK II as well as LEP, provide increasingly better measurements of the Z^0 coupling to b quarks. Combined with earlier precision measurements of the Z^0 mass, width, and leptonic branching fractions, the Z^0 decays continue to provide a very precise verification of the Standard Model.

4477 (DOE/ER/40690–1) **Research in elementary particle physics: Annual report, January 1–October 31, 1992.** Ohio State Univ., Columbus, OH (United States). Dept. of Physics. [1992]. 81p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40690. Order Number DE93003153. Source: OSTI; NTIS; INIS; GPO Dep.

Experimental and theoretical work on high energy physics is reviewed. Included are preparations to study high-energy electron-proton interactions at HERA, light-cone QCD, decays of charm and beauty particles, neutrino oscillation, electron-positron interactions at CLEO II, detector development, and astrophysics and cosmology.

4478 (DOE/ER/40715–1) **[High energy physics]: Progress report, [January 1, 1992–December 31, 1992].** Massachusetts Univ., Amherst, MA (United States). [1992]. 14p. 4479 (CBPF-NF–037/91) **An alternative prescription for Gauging Floreanini-Jackiw chiral bosons.** Dias, S.A.; Souza Dutra, A. de. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1991. 18p. Order Number DE93608243. Source: OSTI; NTIS (US Sales Only); INIS.

We seek new couplings of chiral bosons to U (1) gauge fields. Lorentz covariance of the resulting constrained Lagrangian is checked with the help of a procedure based in the first-order formalism of Faddeev and Jackiw. We find Harada's constraint and another local one not previously considered, besides infinite nonlocal couplings.We analyze the constraint structure and part of the spectrum of this second solution and show that it is equivalent to an explicitly covariant coupling of Siegel's chiral boson to gauge fields, which preserves chirality under gauge transformations. (author).

4480 (DESY–92-018) **Lagrangians and anomaly-candidates of D=4, N=1 rigid supersymmetry.** Brandt, F. (Hannover Univ. (Germany). Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jun 1992. 36p. (ITP-UH–3/92). Order Number DE93728832. Source: OSTI; NTIS (US Sales Only); INIS.

It is investigated how to construct the most general invariant action and whether there are anomaly-candidates is D=4, N=1 globally supersymmetric theories. The importance of the representation theory of the supersymmetry algebra for these questions is discussed. For a class of theories with special sypersymmetric multiplet structure complete answers are given. Examples of more general cases are discussed. (orig.).

4481 (DESY–92-067) **Local couplings, double insertions and the Weyl consistency condition.** Kraus, E. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany)); Sibold, K. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). May 1992. 33p. Order Number DE93728758. Source: OSTI; NTIS (US Sales Only); INIS.

Within massless $\phi^4{}_4$-theory we set up the formalism which is needed, when the coupling λ is permitted to become an external field, i.e. a function of space-time. In particular we have worked out the action of the corresponding Callan-Symanzik operator and conformal transformations on the vertex functions, and furthermore how the Weyl transformations act on the theory with the energy-momentum tensor invariantly coupled. With the help of the Weyl consistency condition we have shown that in the limit of constant coupling the Weyl braking can entirely be written in terms of differential operators, but that otherwise, for truely local coupling, new breaking terms survive. (orig.).

4482 (DESY–92-068) **Quasi quantum group covariant q-oscillators.** Schomerus, V. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). May 1992. 22p. Order Number DE93728757. Source: OSTI; NTIS (US Sales Only); INIS.

If q is a p-th root of unity there exists a quasi-co-associative truncated quantum group algebra $U^T{}_q\,(sl_2)$ whose indecomposable representations are the physical representations of $U_q(sl_2)$, whose co-product yields the truneated tensor product of physical representations of $U_q(sl_2)$, and whose R-matrix satisfies quasi Yang Baxter equations. For primitive p-th roots q, we consider a 2-dimensional q-oscillator which admits $U^T{}_q(sl_2)$ as a symmetry algebra. Its wave functions lie in a space $F^T{}_q$ of 'functions on the truncated quantum plane', i.e. of polynomials in noncommuting complex coordinate functions z_a, on which multiplication operators Z_a and the elements of $U^T{}_q(sl_2)$ can act. This illustrates the concept of quasi quantum planes. Due to the truncation, the Hilbert space of states is finite dimensional. The subspaces $F^{T(n)}$ of monomials in x_a of n-th degree vanish for $n \geq$ p-1, and $F^{T(n)}$ carries the 2J+1 dimensional irreducible representation of $U^T{}_q(sl_2)$ if n=2J, J=0, 1/2, ... 1/2(p-2). Partial derivatives δ_a are introduced. We find a *-operation on the algebra of multiplication operators Z_i and derivatives δ_b such that the adjoints $Z^*{}_a$ act as differentiation on the truncated quantum plane. Multiplication operators Z_a ('creation operators') and their adjoints ('annihilation operators') obey $q^{-1/2}$-commutation relations. The *-operation is used to determine a positive definite scalar product on the truncated quantum plane $F^T{}_q$. Some natural candidates of Hamiltonians for the q-oscillators are determined. (orig./HSI).

4483 (DESY–92-072) **Dynamical symmetry as a tool to understanding properties of supersymmetric partner potentials. Example of so(2,1) symmetry.** Wehrhahn, R.F. (Hamburg Univ. (Germany). Theoretical Nuclear Physics); Cooper, I.L. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). May 1992. 16p. Order Number DE93728754. Source: OSTI; NTIS (US Sales Only); INIS.

Analysis of the dynamical symmetry of a system is used to predict properties arising from its supersymmetric quantum mechanical treatment. Two applications of the so(2,1) algebra, the Coulomb potential and Morse oscillator potential which display different structure with respect to the dynamical symmetry, are studied. This difference is shown to be responsible for the behaviour of the respective supersymmetric partner potentials. (orig.).

4484 (DESY–92-094) **Kinematics of multigrid Monte Carlo.** Grabenstein, M. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik); Pinn, K. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 36p. Order Number DE93728896. Source: OSTI; NTIS (US Sales Only); INIS.

We study the kinematics of multigrid Monte Carlo algorithms by means of acceptance rates for nonlocal Metropolis update proposals. An approximation formula for acceptance rates is derived. We present a comparison of different coarse-to-fine interpolation schemes in free field theory, where the formula is exact. The predictions of the approximation formula for several interacting models are well confirmed by Monte Carlo simulations. The following rule is found: For a critical model with fundametal Hamiltonian $H(\phi)$, absence of critical slowing down can only be expected if the expansion of $(H(\phi+\psi))$ in terms of the shift ψ contains no relevant (mass) term. We also introduce a multigrid update procedure for nonabelian lattice gauge theory and study the acceptance rates for gauge group SU(2) in four dimensions. (orig.).

4485 (DESY–92-105) **The spectrum of the conserved charges in affine Toda theories.** Niedermaier, M.R. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 43p. Order Number DE93729018. Source: OSTI; NTIS (US Sales Only); INIS.

A vertex operator construction for the phase of the minimal form factor is used to predict the exact spectrum of the infinite set of conserved charges on the multi-particle states in affine Toda theories from the bootstrap S-matrix. Conversely, the scattering phase can be recovered from the spectral information. The result is checed against the classical spectrum which is calculated ab-initio using the τ-function formalism. The latter is shown to provide a considerable shortcut compared to the traditional use of the inverse scattering transform. (orig.).

4486 (DESY–92-111) **Numerical simulation of heavy fermions in an $SU(2)_L x SU(2)_R$ symmetric Yukawa model.** Frick, C. (RWTH Aachen (Germany). Inst. fuer Theoretische Physik E); Trappenberg, T.; Lin, L.; Muenster, G.; Plagge, M.; Montvay, I.; Wittig, H. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 28p. Order Number DE93728876. Source: OSTI; NTIS (US Sales Only); INIS.

An exploratory numerical study of the influence of heavy fermion doublets on the mass of the Higgs boson is performed in the decoupling limit of a chiral $SU(2)_L$ x $SU(2)_R$ symmetric Yukawa model with mirror fermions. The behaviour of fermion and boson masses is investigated at infinite bare quartic coupling on 4^3 x 8, 6^3 x 12 and 8^3 x 16 lattices. A first estimate of the upper bound on the renormalized quartic coupling as a function of the renormalized Yukawa-coupling is given. (orig.).

4487 (DOE/ER/40542–73) **Problems in particle theory: Technical report 1991–1992.** Adler, S.L.; Wilczek, F. Institute for Advanced Study, Princeton, NJ (United States). Nov 1992. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER40542. Order Number DE93003687. Source: OSTI; NTIS; INIS; GPO Dep.

Members of the Institute have worked on a number of problems including the following: acceleration algorithms for the Monte Carlo analysis of lattice field, and gauge and spin theories, based on changes of variables specific to lattices of dimension 2^d; construction of quaternionic generalizations of complex quantum mechanics and field theory; wave functions for paired Hall states; black hole quantum mechanics; generalized target-space duality in curved string backgrounds; gauge symnmetry algebra of the N = 2 string; two-dimensional quantum gravity and associated string theories;

organizing principles from which the signal processing of neural networks in the retina and cortex can be deduced; integrable systems of KdV type; and a theory for Kondo insulators.

4488 (DOE/ER/40682–10) **Baryon asymmetry from Planck-scale physics.** Gelmini, G. (California Univ., Los Angeles, CA (United States). Dept. of Physics); Holman, R. Carnegie-Mellon Univ., Pittsburgh, PA (United States). Jun 1992. 6p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract FG02-91ER40682 ;AC02-76ER03066. Grant PHY89-04035. (CMU-HEP–92-15;NSF-ITP–92-101;UCLA–92/TEP/25). Order Number DE93002643. Source: OSTI; NTIS; INIS; GPO Dep.

It has been noted recently that Planck scale physics may induce the explicit breaking of global symmetries. We point out that in Majoron models, these explicit breakings, combined with sphaleron induced violation of B + L can give rise to the baryon asymmetry of the Universe.

4489 (DOE/ER/40682–19) **Solutions to the strong-CP problem in a world with gravity.** Holman, R. (California Univ., Santa Barbara, CA (United States). Inst. for Theoretical Physics); Hsu, S.D.H.; Kephart, T.W. Carnegie-Mellon Univ., Pittsburgh, PA (United States). Jan 1992. 6p. Grant PHY89-04035;Grant NSF-PHY-87-14654;Grant TNRLC-RGFY106;Gra (NSF-ITP–92-06;CMU-HEP–92-05;HUTP–92A011;FNAL/Pub–92/34-A). Order Number DE93002650. Source: OSTI; NTIS; INIS; GPO Dep.

We examine various solutions of the strong-CP problem to determine their sensitivity to possible violations of global symmetries by Plauck scale physics. While some solutions remain viable even in the face of such effects. Violations of the Peccei-Quinn (PQ) symmetry by non-renormalizable operators of dimension less than 10 will generally shift the value of $\bar{\theta}$ to values inconsistent with the experimental bound $\bar{\theta} \lesssim 10^{-9}$. We show that it is possible to construct axion models where gauge symmetries protect PQ symmetry to the requisite level.

4490 (DOE/ER/40716–1) **[Investigations in particle and field theory]: Progress report, September 1992.** Connecticut Univ., Storrs, CT (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER40716. Order Number DE93002163. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses quantum chromodynamics in axial gauges, gauge theories in 2+1 dimensions, non-perturbative structure of the nucleon, and fourth order conformal Weyl invariant theory of gravity.

4491 (GSI–92-55(prepr.)) **The equal-time Wigner transform of the Klein-Gordon field and pair creation.** Best, C. (Tel Aviv Univ. (Israel). School of Physics and Astronomy); Eisenberg, J.M.; Greiner, W.; Soff, G. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Aug 1992. 7p. Order Number DE93729008. Source: OSTI; NTIS (US Sales Only); INIS.

We derive the equation that governs the Wigner function of spinless bosons in a classical electromagnetic field. It describes a relativistic gas of positively and negatively charged particles with quantum corrections due to interferences that cause pair creation. in homogeneous fields, the Schwinger term is recovered. (orig.).

4492 (IC–92/150) **BRST cohomology ring in 2D gravity coupled to minimal models.** Kanno, H.; Sarmadi, M.H. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 20p. Order Number DE93608192. Source: OSTI; NTIS (US Sales Only); INIS.

The ring structure of Lian-Zuckerman states for (q,p) minimal models coupled to gravity is shown to be $R=R_0xC[w,w^{-1}]$ where R_0 is the ring of ghost number zero operators generated by two elements and w is an operator of ghost number -1. Some examples are discussed in detail. For these models the currents are also discussed and their algebra is shown to contain the Virasoro algebra. (author). 21 refs.

4493 (IC–92/181) **WA-circumflex(n - 1 modul n - 1)$^{(1)}$ Miura transformation: Analysis and applications.** Saidi, E.H. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 46p. Order Number DE93608193. Source: OSTI; NTIS (US Sales Only); INIS.

We introduce the concept of conformal spin gradation of the untwisted affine Lie superalgebra A-circumflex(n -1 modul n - 1)$^{(1)}$ to study the WA-circumflex(n - 1 modul n - 1)$^{(1)}$ Miura transformation. We show that the essential of A-circumflex(n - 1 modul n - 1)$^{(1)}$ may be read from the conformal spin gradation of the canonical vector basis of the SL(n modul n) vector representation space V_{2n} and a spectral parameter μ. We give the generic formula of their conformal spin weights. Then, we set up the fundamentals of a manifestly N = 2 U(1) Lax formalism leading to a manifestly N = 2 WA-circumflex(n - 1 modul n - 1)$^{(1)}$ Miura transformation. Its explicit form is obtained and is shown to have a similar structure as in the N = 0 case. Both N = 0 WA-circumflex(n - 1)$^{(1)}$ and N = 2 WA-circumflex(n - 1 modul n - 1)$^{(1)}$ Miura transformations involve (n - 1) N = 0 and N = 2 conserved currents with integer conformal spins. The leading cases are discussed. Using the U(1) charge of the N = 2 algebra, we develop also a new method of constructing N = 2 superfield realizations of the N = 2 higher spin supercurrents. Among other results, we find that in general there are three series of (n - 1) higher conformal spin N = 2 supercurrents. The usual N = 2 super W currents are the only hermitian ones. At the n = 3 level, we find a new Feigin Fuchs type extension of the conformal spin one N = 2 supercurrent. Such a feature, which has no analogue at the n = 2 level, is also present for n>3. Finally, we give the N = 2 superfield formulation of the N = 2 Boussinesq equation and its generalization involving complex N = 2 supercurrents. (author). 27 refs.

4494 (IC–92/203) **On the scalar curvature of self-dual manifolds.** Kim, J. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 31p. Order Number DE93608194. Source: OSTI; NTIS (US Sales Only); INIS.

We generalize LeBrun's explicit "hyperbolic ansatz" construction of self-dual metrics on connected sums of conformally flat manifolds and CP^2's through a systematic use of the theory of hyperbolic geometry and Kleinian groups. (This construction produces, for example, all self-dual manifolds with semi-free S^1-action and with either nonnegative scalar curvature or positive-definite intersection form.) We then point out a simple criterion for determining the sign of the scalar curvature of these conformal metrics. Exploiting this, we then show that the sign of the scalar curvature can change on connected components of the moduli space of self-dual metrics, thereby answering a question raised by King and Kotschick. (author). Refs.

4495 (IC–92/210) **Radiation reaction for the classical relativistic spinning particle in scalar, tensor and linearized gravitational fields.** Barut, A.O.; Cruz, M.G. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 10p. Order Number DE93608191. Source: OSTI; NTIS (US Sales Only); INIS.

We use the method of analytic continuation of the equation of motion including the self-fields to evaluate the radiation reaction for a classical relativistic spinning point particle in interaction with scalar, tensor and linearized gravitational fields in flat spacetime. In the limit these equations reduce to those of spinless particles. We also show the renormalizability of these theories. (author). 10 refs.

4496 (IC–92/212) **Distribution function of excitations in systems with fractional statistics.** Protogenov, A.P. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 8p. Order Number DE93608195. Source: OSTI; NTIS (US Sales Only); INIS.

The distribution function of low-energy excitations in 2+1D systems has been considered. It is shown that in these systems the quantum distribution function differs from the usual one by having a finite value of the entropy of linked braids. (author). 47 refs.

4497 (IC–92/220) **A version of superstring with four space-time dimensions.** Dao Vong Duc (Institute of Theoretical

Physics, Hanoi (Viet Nam)); Nguyen Hong Ha; Nguyen Lan Oanh. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 5p. Order Number DE93608196. Source: OSTI; NTIS (US Sales Only); INIS.

We consider a version of reducing the critical dimension of space-time for superstrings based on the internal symmetry group O(p,q). The new additional oscillators used are antisymmetric second rank tensors associated with this group. The model admits the solution without extra spatial dimension. (author). 9 refs.

4498 (IC–92/226) **The Lax operator approach for the Virasoro and the W-constraints in the generalized KdV hierarchy.** Panda, S.; Roy, S. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 26p. Order Number DE93608197. Source: OSTI; NTIS (US Sales Only); INIS.

We show directly in the Lax operator approach how the Virasoro and W-constraints on the τ-function arise in the p-reduced KP hierarchy or Generalized KdV hierarchy. In particular, we consider the KdV and the Boussinesq hierarchy to show that the Virasoro and the W-constraints follow from the string equation by expanding the "additional symmetry" operator in terms of the Lax operator. We also mention how this method could be generalized for higher KdV hierarchies. (author). 34 refs.

4499 (IC–92/238) **Renormalization of Yang-Mills theory in the light-cone gauge using Lagrange-multiplier field.** Mansur Chowdhury, M.A. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 9p. Order Number DE93608198. Source: OSTI; NTIS (US Sales Only); INIS.

It is well established that the Yang-Mills theory is renormalizable in covariant gauges, but there are problems in non covariant gauges, specially in the light-cone gauge. In this paper we have shown that the Yang-Mills theory is renormalizable in the light-cone gauge. Using covariant background field quantization with Lagrange-multiplier field the one-loop vacuum polarization tensor was evaluated in the light-cone planar gauge. We found that the vacuum polarization tensor is transverse and gauge independent. (author). 13 refs, 2 figs.

4500 (IC–92/241) **A note on the Dirac canonical quantization of massive Yang-Mills theory.** Cabo Montes de Oca, A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 6p. Order Number DE93608199. Source: OSTI; NTIS (US Sales Only); INIS.

Various implications of the Lorentz constraint are investigated within the Dirac-brackets quantization of massive Yang-Mills theory. If follows that matrix elements of arbitrary products of the divergence operators $\delta_\mu A^a{}_\mu$ between physical states should vanish. Then, after adding certain functionals to the Hamiltonian, the effect on the physical states of the evolution operator remains unaltered. Arguments are put forward for modified expressions for the formal path integral representation of the evolution operator. (author). 11 refs.

4501 (IC–92/248) **The constraint for the lowest Landau level and the effective field theory approach for the fractional quantum hall system.** Ma Zhongshui (Academia Sinica, Beijing, BJ (China). Inst. of Theoretical Physics); Su Zhaobin. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 13p. Order Number DE93608200. Source: OSTI; NTIS (US Sales Only); INIS.

By applying the Dirac quantization method, we build the constraint that all electrons are in the lowest Landau level into the Chern-Simons field theory approach for the fractional quantum Hall system and show that the constraint can be transmuted from hierarchy to hierarchy. For a finite system, we derive that the action for each hierarchy can be split into two parts: a surface part provides the action for the edge excitations while the remaining part is precisely the bulk action for the next hierarchy. An the action for the edge could be decoupled from the bulk only at the hierarchy filling. (author). 16 refs.

4502 (IFT-P–012/92) **The Lipkin model second order phase transition in the deformed S U(2) algebra description.** Galetti, D.; Pimentel, B.M. Instituto de Fisica Teorica (IFT), Sao Paulo, SP (Brazil). Apr 1992. 14p. Order Number DE93608201. Source: OSTI; NTIS (US Sales Only); INIS.

The standard Lipkin model is studied in the context of the su(2) deformed algebra and a new spectrum is obtained with which a new energy gap curve is calculated. A suppression of the second order phase transition originally present is observed for the deformed case. (author).

4503 (IFT-P–045/91) **Supersymmetric construction of W-algebras from super Toda and WZNW theories.** Ferreira, L.A.; Gomes, J.F.; Ricotta, R.M.; Zimerman, A.H. Instituto de Fisica Teorica (IFT), Sao Paulo, SP (Brazil). Dec 1991. 26p. Order Number DE93608244. Source: OSTI; NTIS (US Sales Only); INIS.

A systematic construction of super W-algebras in terms of the WZNW model based on a super Lie algebra is presented. These are shown to be the symmetry structure of the super Toda models, which can be obtained from the WZNW theory by Hamiltonian reduction. A classification, according to the conformal spin defined by an improved energy-momentum tensor, is discussed in general terms for all super Lie algebras whose simple roots are fermionic. A detailed discussion employing the Dirac bracket structure and an explicit construction of W-algebras for the cases of OSP (1,2), OSP (2,2), OSP (3,2) and D (2,1/α) are given. The N=1 and N=2 super conformal algebras are discussed in the pertinent cases. (author).

4504 (INIS-BR–3033) **On the geometrization of electromagnetism by torsion.** Fonseca Neto, J.B. da. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1984 147p. (In Portuguese). Order Number DE93608202. Source: OSTI; NTIS (US Sales Only); INIS.

The possibility of electromagnetism geometrization using an four dimension Cartan geometry is investigated. The Lagrangian density which presents dual invariance for dyons electrodynamics formulated in term of two potentials is constructed. This theory by association of two potentials with track and with torsion pseudotrack and of the field with torsion covariant divergent is described. The minimum coupling of particle gravitational field of scalar and spinorial fields with dyon geometry theory by the minimum coupling of these fields with Cartan geometry was obtained. (author).

4505 (INIS-BR–3046) **Restoration of symmetry by temperature effect under influence of external electro magnetic field in gauge theory.** Aquino, V.M. de. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. 1987 102p. (In Portuguese). Order Number DE93608245. Source: OSTI; NTIS (US Sales Only); INIS.

We have analysed, within a semi classical approach, the influence of external electromagnetic field on phase transitions in gauge theories. The critical temperature was calculated for an Abelian case, scalar electrodynamics, and for an non Abelian case, the Weinberg Salam model. (author).

4506 (ITF–91-72) **Non-standard representations of the space-time groups and their applications to the dynamical theory of elementary particles.** Sannikov, S.S. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 29p. (In Russian). Order Number DE93608203. Source: OSTI; NTIS (US Sales Only); INIS.

A new dynamical approach to the elementary particles problem is proposed. Mathematical foundations of such an approach (non-unitary quantum theory) are developed. Investigation of the structure of the space-time and Dirac vibration in the region of very small distances forms the basis of our considerations. 10 refs. (author).

4507 (ITP–91-29) **1/N-correction to process of dynamical chiral-symmetry breaking in (2+1)-dimensional QED.** Kotikov, A.V. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 5p. Order Number DE93608204. Source: OSTI; NTIS (US Sales Only); INIS.

QED in (2+1) dimensions is analyzed in both the leading and the next-to-leading orders in the 1/N expansions. 7 refs. (author).

4508 (LA-UR–92-3073) **Pair production and back reaction in strong fields: Numerical results.** Mottola, E. Los Alamos National Lab., NM (United States). [1992]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9205258–1: QUARKS '92, Zvenigorod (Russian Federation), 11-16 May 1992). Order Number DE93000859. Source: OSTI; NTIS; INIS; GPO Dep.

The problem I shall address in detail in this talk is pair production of either bosons or fermions from strong electric fields which are functions only of time t, or only of the fluid proper time $\tau = (t^2 - z^2)^{1/2}$. I shall compare the results of the numerical simulation of this problem (for the degradation of the field, the particle spectra, etc.) with a semi-classical transport approach using a Schwinger-inspired source term.

4509 (SLAC–406) **Dressed skeleton expansion and the coupling scale ambiguity problem.** Lu, Hung Jung. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1992. 126p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. Order Number DE93002516. Source: OSTI; NTIS; INIS; GPO Dep.

Perturbative expansions in quantum field theories are usually expressed in powers of a coupling constant. In principle, the infinite sum of the expansion series is independent of the renormalization scale of the coupling constant. In practice, there is a remnant dependence of the truncated series on the renormalization scale. This scale ambiguity can severely restrict the predictive power of theoretical calculations. The dressed skeleton expansion is developed as a calculational method which avoids the coupling scale ambiguity problem. In this method, physical quantities are expressed as functional expansions in terms of a coupling vertex function. The arguments of the vertex function are given by the physical momenta of each process. These physical momenta effectively replace the unspecified renormalization scale and eliminate the ambiguity problem. This method is applied to various field theoretical models and its main features and limitations are explored. For quantum chromodynamics, an expression for the running coupling constant of the three-gluon vertex is obtained. The effective coupling scale of this vertex is shown to be essentially given by $\mu^2 \sim Q_{min}^2 Q_{med}^2 / Q_{max}^2$ where $Q_{min}^2 Q_{med}^2 / Q_{max}^2$ are respectively the smallest, the next-to-smallest and the largest scale among the three gluon virtualities. This functional form suggests that the three-gluon vertex becomes non-perturbative at asymmetric momentum configurations. Implications for four-jet physics is discussed.

The first moments of the spectral densities of the resummed thermal gluon propagator are shown to have the same values as in the full interacting theory. The sum rules of the latter are derived from the equal-time commutator within the class of covariant gauges. (orig.).

4511 (DESY–92-110) **Hadronization of quark flavour dynamics including three-quark forces.** Ebert, D. (Humboldt-Univ., Berlin (Germany). Fachbereich Physik); Kaschluhn, L. Deutsches Elektronen-Synchrotron (DESY), Zeuthen (Germany). Inst. fuer Hochenergiephysik. Jul 1992. 18p. Order Number DE93728874. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate an effective chiral quark model containing besides a two quark Nambu-Jona-Lasinio force also three-quark forces. By means of path-integral techniques this model is, at first, converted into a quark-diquark-meson-baryon theory and afterwards hadronized into a meson-baryon theory. This way, we have demonstrated the step-by step reduction of a three-body problem to a two-body problem in the collective field approach. (orig.).

4512 (DOE/ER/40682–15) **Metastable cosmic strings in realistic models.** Holman, R. (Carnegie-Mellon Univ., Pittsburgh, PA (United States). Dept. of Physics); Hsu, S.; Vachaspati, T.; Watkins, R. Carnegie-Mellon Univ., Pittsburgh, PA (United States). [1992]. 25p. Sponsored by USDOE, Washington, DC (United States); National Aeronautics and Space Administration, Washington, DC (United States); National Science Foundation, Washington, DC (United States); Texas State Government, Austin, TX (United States); Harvard Uni DOE Contract FG02-91ER40682. Grant PHY89-04035;Grant TNRLC-RGFY106;Grant NSF-PHY-87-14654;Gra (FERMILAB-PUB–92/228-A;HUTP–92/A032;CMU-HEP–92-20). Order Number DE93002647. Source: OSTI; NTIS; INIS; GPO Dep.

The stability of the electroweak Z-string is investigated at high temperatures. The results show that, while finite temperature corrections can improve the stability of the Z-string, their effect is not strong enough to stabilize the Z-string in the standard electroweak model. Consequently, the Z-string will be unstable even under the conditions present during the electroweak phase transition. Phenomenologically viable models based on the gauge group $SU(2)_L \times SU(2)_R \times U(1)_{B-L}$ are then considered, and it is shown that metastable strings exist and are stable to small perturbations for a large region of the parameter space for these models. It is also shown that these strings are superconducting with bosonic charge carriers. The string superconductivity may be able to stabilize segments and loops against dynamical contraction. Possible implications of these strings for cosmology are discussed.

4513 (DOE/ER/40682–16) **Bounds on the mixing of the down-type quarks with vector-like singlet quarks.** Lavoura, L.; Silva, J.P. Carnegie-Mellon Univ., Pittsburgh, PA (United States). Dept. of Physics. 8 Sep 1992. 20p. Sponsored by USDOE, Washington, DC (United States); Government of Portugal, Lisbon (Portugal). DOE Contract FG02-91ER40682. Grant BIC Nsup O C/14/91. (CMU-HEP–92-21). Order Number DE93002648. Source: OSTI; NTIS; INIS; GPO Dep.

We derive bounds on the mixing of the standard charge -1/3 quarks with vector-like isosinglet quarks, as they exist in some extensions of the standard model. We make no assumptions about the unitarity or any other features of the mixing matrix. We find that the mixing is quite constrained: we are able to set bounds on all the extra parameters which arise in the mixing matrix (CKM matrix), except on two phases. The assumption that there exists only one exotic quark leads to some extra relationships among the parameters of the mixing matrix.

4514 (IC–92/202) **Qualitative picture of mesons in the Dirac oscillator theory.** Gonzalez, A. (International Centre for Theoretical Physics, Trieste (Italy)); Loyola, G.; Moshinsky, M. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 13p. Order Number DE93608298. Source: OSTI; NTIS (US Sales Only); INIS.

A relativistic two-particle radial equation describing a particle-antiparticle system with a Dirac oscillator interaction is written and solved by means of the 1/N expansion. The emerging picture of Dirac-oscillator mesons seems to be in qualitative agreement with meson phenomenology. The spectrum of excitation energies, the strong interaction radii, and the decay widths of states in our model are calculated and compared with the corresponding experimental magnitudes for mesons with a pure quark composition and total momentum J=L. (author). 15 refs, 3 figs.

4515 (IC–92/213) **Lepton-quark families, cosmic strings and "democratic" mass matrix.** Koca, M. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 7p. Order Number DE93608263. Source: OSTI; NTIS (US Sales Only); INIS.

We propose a model where $SU(2)_L x SU(2)_R x U(1)$ electroweak symmetry is spontaneously broken to $SU(2)_L x U(1)_Y x T', T'$ being the binary tetrahedral group of order 24. Irreducible representations of T' consisting of three doublets and three singlets are used to distinguish the family structure. Cosmic strings, formed by the symmetry breaking mechanism, distinguish the family members above the usual electroweak scale. Natural correspondence of the irreducible representations of T' with the modes of the Dynkin diagram of E-circumflex$_6$ induces an S_3 symmetry on the Yukawa couplings leading to "democratic" mass matrix. For no room is left for the fundamental Higgs $\phi(2,2)$ a dynamical symmetry breaking via t-bar t and b-bar b condensates is invoked. (author). 14 refs, 1 fig.

4516 (IC–92/216) **17 keV neutrino and large magnetic moment solution of the solar neutrino puzzle.** Akhmedov, E.Kh.

(International Centre for Theoretical Physics, Trieste (Italy)); Senjanovic, G.; Tao Zhijian; Berezhiani, Z.G. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 11p. (SISSA–141/92/EP;LMU–10/92.). Order Number DE93608264. Source: OSTI; NTIS (US Sales Only); INIS.

Zee-type models with Majorons naturally incorporate the 17 keV neutrino but in their minimal version fail to simultaneously solve the solar neutrino puzzle. If there is a sterile neutrino state, we find a particularly simple solution to the solar neutrino problem, which besides ν_{17} predicts a light Zeldovich-Konopinski-Mahmoud neutrino $\nu_{light}=\nu_e+\nu_\mu{}^c$ with a magnetic moment being easily as large as $10^{-11}\mu_B$ through the Barr-Freire-Zee mechanism. (author). 30 refs, 2 figs.

4517 (IFT-P–011/92) **Qed$_3$ radiative corrections in the Heisenberg picture.** Pimentel, B.M.; Suzuki, A.T.; Tomazelli, J.L. Instituto de Fisica Teorica (IFT), Sao Paulo, SP (Brazil). Apr 1992. 12p. Order Number DE93608282. Source: OSTI; NTIS (US Sales Only); INIS.

We evaluated the vacuum polarization tensor for three-dimensional quantum electrodynamics (QED_3) via Heisenberg equations of motion. We thus conclude that the photon acquires mass when such contribution is taken into account for the photon propagator. (author).

4518 (IFT-P–013/92) **Null-plane approach to the neutron pion decay and transition form-factor.** Frederico, T. (Centro Tecnico Aeroespacial (CTA-IEAv), Sao Jose dos Campos, SP (Brazil). Inst. de Estudos Avancados); Tomio, L. Instituto de Fisica Teorica (IFT), Sao Paulo, SP (Brazil). May 1992. 17p. Order Number DE93608265. Source: OSTI; NTIS (US Sales Only); INIS.

We study the $\pi^0 \rightarrow \gamma^* \gamma$ process using different model wavefunctions in the null-plane. We compute the π^0 decay and electromagnetic transition form-factor, and we found out that the π^0 width has a strong model sensitivity and should be used as an important constraint to the model wave function. (author).

4519 (INP–1504/PH) **Simulation of the space-time evolution of color-flux tubes (guidelines to the TERMITE program).** Dyrek, A. (Uniwersytet Jagiellonski, Cracow (Poland). Inst. Fizyki); Florkowski, W. Institute of Nuclear Physics, Cracow (Poland). Aug 1990. 48p. Grants CPBP 01.03 and 01.09. Order Number DE93608299. Source: OSTI; NTIS (US Sales Only); INIS.

In TURBO PASCAL for IBM PC.

We give the description of the computer program which simulates boost-invariant evolution of color-flux tubes in high-energy processes. The program provides a graphic demonstration of space-time trajectories of created particles and can also be used as Monte-Carlo generator of events. (author).

4520 (INP–1518/PH) **About chiral models of dense matter and its magnetic properties.** Kutschera, M. Institute of Nuclear Physics, Cracow (Poland). Dec 1990. 152p. (In Polish). Order Number DE93608286. Source: OSTI; NTIS (US Sales Only); INIS.

In this report the other author's papers are enclosed.

The chiral models of dense nucleon matter are discussed. The quark matter with broken chiral symmetry is described. The magnetic properties of dense matter are presented and conclusions are given. 37 refs. (A.S.).

4521 (ITP–91-39) **Effective reduced action for gauge theories at finite temperatures.** Borisenko, O.A.; Petrov, V.K. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 17p. Order Number DE93608287. Source: OSTI; NTIS (US Sales Only); INIS.

The reduced (d+1)-dimensional lattice QCD in the static gauge ${}_0A_0=0$ with staggered fermions at finite temperatures and nonzero chemical potential are presented. We suggest a d-dimensional model for the SU(2) QCD at high temperatures in term of d-dimensional scalar fields and Poliakov loops. Relations to G. Mack dielectric theory and Georgy-Glashow model are studied. 8 refs. (author).

4522 (ITP–91-64) **Tuning in phase structure analysis of lattice QCD at finite temperature.** Averchenkova, L.A.; Borisenko, O.A.; Petrov, V.K.; Zinov'ev, G.M. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 13p. Order Number DE93608288. Source: OSTI; NTIS (US Sales Only); INIS.

The Bogoliubov's method of quasi averages is utilized to explore the phase structure of an effective action of finite temperature lattice QCD. Refining upon standard mean field analysis in such an approach we specify some features at deconfinement critical temperature. 15 refs.; 3 figs. (author).

4523 (ITP–91-79) **Q^2 evolution of a soft gluon distribution function.** Enkovszky, L.L.; Kotikov, A.V.; Paccanoni, F. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 16p. Order Number DE93608289. Source: OSTI; NTIS (US Sales Only); INIS.

Recently a model for the soft gluon distribution function, $XG(X,Q^2)x->0\approx I^B(\ln 1/x)^B$, related to a double pomeron pole exchange, was suggested. Here we calculate the Q^2 dependence of its parameters in the framework of the GLAP evolution equation - both in LLA and double log approximation. The $\approx \ln 1/x$ behaviour appears to be unstable with respect to perturbation calculations. 11 refs.; 1 fig. (author).

4524 (SLAC-PUB–5917) **QCD on the light cone.** Brodsky, S.J. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9206302–1: QCD - 20 years later workshop, Aachen (Germany), 9-13 Jun 1992). Order Number DE93001822. Source: OSTI; NTIS; INIS; GPO Dep.

The quantization of gauge theory at fixed light-cone time $\tau = t - z/c$ provides new perspectives for solving non-perturbative problems in quantum chromodynamics. The light-cone Fock state expansion provides both a precise definition of the relativistic wavefunctions of hadrons as bound-states of quarks and gluons and a general calculus for predicting QCD processes at the amplitude level. Applications to exclusive processes and weak decay amplitudes are discussed. The problem of computing the hadronic spectrum and the corresponding light-cone wavefunctions of QCD in one space and one time dimension has been successfully reduced to the diagonalization of a discrete representation of the light-cone Hamiltonian. The problems confronting the solution of gauge theories in 3 + 1 dimensions in the light-cone quantization formalism,, including zero modes and non-perturbative renormalization, are reviewed.

4525 (BNL–47950) **A lattice calculation of the decay constants of heavy-light pseudoscalars.** Labrenz, J.N. Brookhaven National Lab., Upton, NY (United States). Aug 1992. 166p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE93000379. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to Univ. of California, Los Angeles.

A lattice calculation of the decay constants for D and B mesons is described. Results are obtained (in the quenched approximation) from wall-source lattices in Coulomb gauge at $\beta = 6.3$, through a procedure that interpolates smoothly between the static approximation of Eichten and the conventional ("heavy" Wilson fermion) method. The previously observed discrepancy between these two approaches has been understood, and we discuss the resolution and its limitations. We find $f_D = 206(9) \pm 37$ MeV, $f_{D_s} = 231(7) \pm 39$ MeV, $f_B = 179(10) \pm 39$ MeV, and $f_{B_s} = 203(8) \pm 42$ MeV. The first error in each result is statistical, resulting from the jackknife procedure applied to the full analysis. The second is our estimate of systematic errors due to scale-breaking, axial current renormalization, and fitting or extrapolation uncertainties.

This report contains papers on the following topics: The proton compton effect: Recent measurements of the electric and magnetic polorizabilities of the proton; experiments on the electric polarizability of the neutron; chiral symmetry and nucleon polarizabilities; chiral model predictions for electromagnetic polarizabilities of the nucleon, a consumer report; the polarizabilities of bound nucleons; nucleon polarizability in free space and in nuclear matter; mechanisms of photon scattering on nucleons at intermediate energies; pion polarizabilities in chiral perturbation theory; pion polarizabilities and the shielding of $\sigma(700)$-meson exchange in $\gamma\gamma\to\pi\pi$ processes; pion and kaon polarizabilities in the quark confinement model; radiative pion photoproduction and pion polarizabilities; pion and sigma polarizabilities and radiative transitions; the quadrupole amplitude in the γN-Δ transition; pion photoproduction and the γN-Δ amplitudes; effective- lagrangians, Watson's theorem, and the E2/M1 mixing ratio in the excitation of the delta resonance; new measurements of the $p(\vec{\gamma}, \pi^o)$ reaction; multipole analyses and photo-decay couplings at intermediate energies; compton scattering off the proton; connections between compton scattering and pion photoproduction in the delta region; single-pion electroproduction and the transverse one-half and scalar helicity transition form factors; relativistic effects, QCD mixing angles, and $N \to N\gamma$ and $\Delta \to \gamma N$ transition form factors; electroproduction studies of the $N \to \Delta$ transition at bates and CEBAF.

4527 (BNL–48118) **Strangeness signals in heavy ion collisions.** Remsberg, L.P. Brookhaven National Lab., Upton, NY (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920837–19: ICHEP-26: 26th International Union of Pure and Applied Physics (IUPAP) conference on high energy physics, Dallas, TX (United States), 6-12 Aug 1992). Order Number DE93002935. Source: OSTI; NTIS; INIS; GPO Dep.

The experimental data on strange meson and strange baryon production in relativistic heavy ion collisions are reviewed.

4528 (CBPF-NF–036/91) **On the decay $D_s^+ \to$ p n-bar.** Bediaga, I.; Predazzi, E. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1991. 9p. Order Number DE93608348. Source: OSTI; NTIS (US Sales Only); INIS.

Summary classical arguments are used to show that the decay $D^+_s \to$ p n-bar could be an indicator of whether or not the axial current is conserved at large q^2. Keeping the π (1300) as the most relevant contribution to the form factor associated to the four divergence of the axial constant we find indications that the decay BR ($D^+_s \to$ p n-bar) could be as large as $\approx$ 1%. (author).

4529 (DESY–92-071) **Biolocal field approach and semileptonic heavy meson decays.** Kalinovsky, Y.L. (Joint Inst. for Nuclear Research, Dubna (Russia)); Kaschluhn, L. Deutsches Elektronen-Synchrotron (DESY), Zeuthen (Germany). Inst. fuer Hochenergiephysik. May 1992. 28p. Order Number DE93728756. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper we consider the bilocal field approach for QCD. We obtain a bilocal effective meson action with a potential kernel given in relativistic covariant form. THe corresponding Schwinger-Dyson and Bethe-Salpeter equations are investigated in detail. By introducing weak interactions into the theory we study heavy meson properties as decay constants and semileptonic decay amplitudes. Thereby, the transition from the bilocal field description to the heavy quark effective theory is discussed. Considering as example the semileptonic decay of a pseudoscalar B-meson into a pseudoscalar D-meson we obtain an integral expression for the corresponding Isgur-Wise function in terms of meson wave functions. (orig.).

4530 (DESY–92-073) **Photon induced reactions at HERA.** Levy, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany)). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). May 1992. 20p. (CONF-9203167–: International symposium on micromechanics: homogenization, heterogenization and strength, La Jolla, CA (United States), 27-29 Mar 1992). Order Number DE93728747. Source: OSTI; NTIS (US Sales Only); INIS.

Some phenomenological and experimental issues concerning photoproduction at HERA are discussed. This includes the total photoproduction cross section, light and heavy quark photoproduction, determination of parton densities in the proton and in the photon and the photon-photon possibilities at HERA. (orig.).

4531 (DESY–92-078) **Real and virtual photon contributions to inelastic ep scattering.** Borzumati, F.M. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik); Schuler, G.A. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jun 1992. 31p. Contract BMFT 054HH92P. (CERN–6519/92;MPI-Ph–91-113). Order Number DE93728833. Source: OSTI; NTIS (US Sales Only); INIS.

We investgate direct and resolved photon contributions to hard ep scattering at high energies. Some terms of the direct contribution are already included in the resolved photon one, described in terms of the photon structure functions. A suitable subtraction mechanism has to be found in order to avoid double counting. Inelastic ep scattering requires the knowledge of photon structure functions over a wide range in photon virtuality, in particular from approximately zero up to almost $10^5 GeV^2$ at HERA. We analyse the real and virtual photon structure function and we comment on the structure of the photon in the intermediate region of low virtuality. We finally describe how ep cross sections can be obtained as functions of the virtuality of the exchanged photon. (orig.).

4532 (DESY–92-082) **Measurement of the decay $\tau^- \to \rho^- \nu_\tau$.** Albrecht, H. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany)); Ehrlichmann, H.; Hamacher, T.; Hofmann, R.P.; Kirchhoff, T.; Nau, A.; Nowak, S.; Schroeder, H.; Schulz, H.D.; Walter, M.; Wurth, R.; Appuhn, R.D.; Hast, C.; Kolanoski, H.; Lange, A.ARGUS Collaboration. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jun 1992. 16p. Contract BMFT 054DO51P;BMFT 054ER12P;BMFT 055HD21P;BMFT 054KA17P Order Number DE93728831. Source: OSTI; NTIS (US Sales Only); INIS.

An analysis of the decay $\tau^- \to \pi^- \pi^o \nu_\tau$ has been performed using the ARGUS detector at the DORIS II storage ring. The branching ratio has been determined to be $Br(\pi^- \to \pi^- \pi^o \nu_\tau) = (22.6 \pm 0.4 \pm 0.9)\%$. The spape of the $\pi^- \pi^0$ invariant mass spectrum is found to be in good agreement with the predictions obtained using the conserved vector current (CVC) hypothesis, suggesting that the $\pi^- \pi^0$ system is produced in a $J^P = 1^-$ state. An analysis of the measured decay angular distribution of the pions with respect to the flight direction of the $\pi^- \pi^0$ system demonstrates the vector nature of the coupling at the $\tau\nu_\tau$ vertex. With the assumption of zero ν_τ mass the ν_τ spin has been shown to be $J_{\nu\tau} = 1/2$. (orig.).

4533 (DESY–92-085) **Heavy quark physics at HERA.** Ali, A. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jun 1992. 16p. (CONF-9204210–: 1992 Zeuthen workshop on elementary particle theory: Deep inelastic scattering, Teupitz (Germany), 6-10 Apr 1992). Order Number DE93728894. Source: OSTI; NTIS (US Sales Only); INIS.

A brief overview of the anticipated heavy quark physics at HERA is given. The topics discussed include heavy quark photo- and leptoproduction cross sections at HERA calculated in the context of perturbative QCD, various mechanisms of J/ψ-leptoproduction and their rates, determination of the gluon density of the proton using open and bound charmed hadrons, and rare D^0-meson decays. Some selected aspects of B-Physics at HERA are also discussed. (orig.).

4534 (DESY–92-089) **Prompt photon energy spectra in B-decays and determination of the CKM matrix elements.** Ali, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany)); Greub, C. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jun 1992. 20p. (ZU-TH–23/92). Order Number DE93728897. Source: OSTI; NTIS (US Sales Only); INIS.

We present theoretical estimtaes of the inclusive prompt photon energy spectrum in direct decays of B-hadrons through the charged current processes $B \to X_c + \gamma$ and $B \to X_u + \gamma$, and the flavour changing neutral current (FCNC) processes $B \to X_s + \gamma$ and $B \to X_d + \gamma$ (here the subscript q on X_q denotes the quark flavour in the transition $b \to q$). It is argued that the various components in the inclusive spectrum can, in principle, be disentangled using the photon energy and flavour tagging the hadron(s) recoiling against the

photon in B-decays, thereby providing a new technique to determine the CKM matrix elements vertical strokeV_{cb}vertical stroke, vertical strokeV_{ub}vertical stroke, vertical strokeV_{ts}vertical stroke, and vertical strokeV_{td}vertical stroke. In particular, the high energy part of the inclusive photon energy spectrum being dominated by the electromagnetic penguins could provide the first direct measurement of the CKM matrix element vertical strokeV_{ts}vertical stroke. We quantify this by firming up predictions for the inclusive decays $B \rightarrow X_s + \gamma$ in the Standard Model. (orig.).

4535 (DESY–92-090) **B-decays - an overview.** Ali, A. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jun 1992. 18p. (CONF-9203154–: 27. Moriond meeting: Quantum Chromodynamics (QCD) and high energy hadronic interactions, Les Arcs (France), 22-28 Mar 1992). Order Number DE93728893. Source: OSTI; NTIS (US Sales Only); INIS.

We review some selected aspects of B-decays in the context of the Standard Model and the Cabibbo-Kobayashi-Maskawa theory of weak mixing. The calculational framework used is based on perturbative QCD. The topics discussed include an update of the CKM matrix parameters, estimates of the inclusive B-decay rates in the context of the QCD improved spectator model, and inclusive rare B-decays $B \rightarrow X_s + \gamma$ and $B \rightarrow X_d + \gamma$. Exclusive branching ratios $BR(B \rightarrow K^* + \gamma)$ and $BR(B \rightarrow \rho + \gamma)$ are also presented. The importance of rare B-decays in determining the CKM matrix elements is emphasized. (orig.).

4536 (DESY–92-097) **KROWIG, Version 1.0: Interfacing KRONOS and HERWIG or higher order electromagnetic radiative corrections at HERA with hadronic final states.** Ohl, T. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 24p. Order Number DE93728888. Source: OSTI; NTIS (US Sales Only); INIS.

This manual describes version 1.0 of the Monte Carlo event generator KROWIG for deep inelastic lepton hadron scattering at HERA. KROWIG combines the implementation of QED radiative corrections in KRONOS with the QCD parton showers and cluster fragmentation of HERWIG. (orig.).

4537 (DESY–92-098) **The dipole model structure functions.** Andersson, B. (Lund Univ. (Sweden). Dept. of Theoretical Physics); Loennblad, L. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 20p. (LU-TP–92-21). Order Number DE93728889. Source: OSTI; NTIS (US Sales Only); INIS.

We present an approach to the evolution of the valence structure functions based on the Colour Dipole Cascade Model for deep inelastic lepto-production. We show that this approach leads to an evolution equation similar to the DGLAP equation. In our approach the dependence on Q^2 is however much weaker and the evolution levels out at high Q^2. (orig.).

4538 (DESY–92-103) **Quark/gluon jet discrimination at HERA.** Pumplin, J. (Michigan State Univ., East Lansing, MI (United States). Dept. of Physics and Astronomy). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 24p. Order Number DE93728895. Source: OSTI; NTIS (US Sales Only); INIS.

Tests of QCD, and its representation by Monte Carlo shower models such as PYTHIA or HERWIG, are proposed for low-Q^2 events at the e^-p collider HERA. The tests are based on observable features that distinguish between quark jets and gluon jets. They therefore provide sensitivity to the description of parton branching, and to the parton distributions in the photon and proton. (orig.).

4539 (DESY–92-106) **On the origin of the enhancement of CP-violating charge asymmetries in $K^{\pm} \rightarrow 3\pi$ decays predicted from chiral theory.** Bel'kov, A.A. (Joint Inst. for Nuclear Research, Moscow (Russia). Particle Physics Lab.); Lanyov, A.V.; Ebert, D.; Bohm, G.; Schaale, A. Deutsches Elektronen-Synchrotron (DESY), Zeuthen (Germany). Inst. fuer Hochenergiephysik. Jul 1992. 17p. (CONF-920837–: 26. international IUPAP conference on high energy physics, Dallas, TX (United States), 6-12 Aug 1992). Order Number DE93728892. Source: OSTI; NTIS (US Sales Only); INIS.

We present an analysis of the enhancement of CP-violating charge asymmetries in $K^{\pm} \rightarrow 3\pi$ decays. Calculations of decay amplitudes are performed on the basis of bosonized strong and weak Lagrangians derived from QCD-motivated quark Lagrangians. We show that the interplay of fourth-order contributions of chiral Lagrangians for strong interactions and penguin operators in weak interactions significantly enhances the charge asymmetries. (orig.).

4540 (DESY–92-112) **A determination of the Zbanti b vertex correction from LEP data.** Blondel, A. (Ecole Polytechnique, IN2P3, 91 - Palaiseau (France)); Verzegnassi, C.; Djouadi, A. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Aug 1992. 11p. Order Number DE93728877. Source: OSTI; NTIS (US Sales Only); INIS.

Using recent LEP measurements of the ratios of Z bosons widths Γsub(Z→b anti b)/$\Gamma_{Z \rightarrow hadrons}$ and $\Gamma_{Z \rightarrow hadrons}/\Gamma_{Z \rightarrow leptons}$, we determine the size of the vertex radiative correction to the Z → banti b partial decay width. This allows, in the context of the Minimal Standard Model, to set the 95% confidence level upper bound on the top quark mass, $m_t < 208$ GeV independently of the Higgs boson mass. This value is remarkably close to the completely independent available bounds, which are extracted from the measurement of the radiative correction to the ρ parameter. The implication of possible New Physics on this measurement is briefly commented upon. (orig.).

4541 (DESY–92-113) **Radiative rare B decays into higher K-resonances.** Ali, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany)); Ohl, T.; Mannel, T. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Aug 1992. 15p. (IKDA–92/23). Order Number DE93728878. Source: OSTI; NTIS (US Sales Only); INIS.

We estimate the contributions of higher K-resonances to the radiative rare decays b → sγ. We use the spin symmetry for heavy quarks to reduce the number of independent form factors to four Isgur-Wise functions, which are estimated from the wave function model of Isgur, Scora, Grinstein, and Wise. Our results suggest a substantially larger branching fraction for the decay B → $K^*_2(1430)\gamma$ than previous investigations. (orig.).

4542 (DOE/ER/10713–T3) **[Study of electroweak interactions]: Technical progress report, September 1, 1990–August 31, 1991.** Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (United States). Dept. of Physics. [1991]. 40p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AS05-80ER10713. Order Number DE93004367. Source: OSTI; NTIS; INIS; GPO Dep.

This document is a technical progress report for research conducted at Virginia Tech under DOE contract of "Study of Electron-Positron Interactions" # DE-AS05-80ER10713, Task B, during the past year. The report is divided into three main sections, dealing with the three primary activities of the group: the AMY experiment at TRISTAN (hardware upgrade, inclusive and isolated photon production, study of Bhabha scattering, electron substructure, and extra Z bosons, production of Λ^0 and Λ^0, and QED and search for pair production of massive photinos), the MEAGER/RHO experiemnt at LAMPF (planning and data acquisition for the decays $\mu^+ \rightarrow e^+\gamma$ and $\mu^+ \rightarrow e^+\nu_e\bar{\nu}_\mu$), and an r and d program on resistive plate chamber development at Virginia Tech.

4543 (DOE/ER/40390–5) **Experiments on the nuclear interactions of pions and electrons: Progress report.** Minehart, R.C.; Ziock, K.O.H. Virginia Univ., Charlottesville, VA (United States). Dept. of Physics. Aug 1992. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER40390. Order Number DE93001800. Source: OSTI; NTIS; INIS; GPO Dep.

The analysis of the deuterium content in the CD target used in an experiment to study the $\pi + d \rightarrow 2p$ reaction at incident pion energies from 4 to 20 MeV was completed. The final paper describing this experiment will be submitted for publication this summer. Analysis of LAMPF Exp. on pion absorption in ^{4}He is continuing. In 1991, we collaborated with D. Pocanic from the Univ. of Virginia on a measurement at LAMPF of the π^0 production in π + p interactions. This run proved the validity of the method and additional data were obtained in a second run during the summer of 1992, using a new target. Current collaborations at LAMPF include the search for the decay $\mu^+ \rightarrow e^+ + \gamma$(MEGA) and a measurement of the Michel ρ parameter in the decay $\mu \rightarrow e + \nu + \nu$. A U.Va.–PSI collaboration is measuring pion beta decay to an accuracy of

less than 1%, using a large acceptance CsI detector to measure the π^0 following decay of stopped π^+ mesons. Most of the U.Va. effort is devoted to the CEBAF Large Acceptance Spectrometer (CLAS) program to the construction of the CLAS forward calorimeter. An apparatus to measure the properties of the scintillators with light from a N_2 laser was built in the spring of 1992. The electronic circuitry for the energy signal from the EGN detector and the circuitry needed to route the signals from the all the photomultipliers to the TDC and ADC circuits are being developed. Experimental proposals for the study of electroproduction of nucleon resonances at CEBAF, including measurements with polarized beam and targets, are being developed.

4544 (DOE/ER/40412–T1) **The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV $\bar{p}p$ collisions; and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions: Progress report, January 1, 1992–December 31, 1992.** Scharenberg, R.P.; Hirsch, A.S.; Tincknell, M.L. Purdue Univ., Lafayette, IN (United States). Dept. of Physics. 15 Sep 1992. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER40412. Order Number DE93002094. Source: OSTI; NTIS; INIS; GPO Dep.

An experiment to search for the production of quark–gluon plasma in proton–antiproton interactions is described with emphasis on 1992 results. Next, a search for critical phenomena using the EOS Time Projection Chamber is similarly described, including the results of 1992 test runs, nucleus–nucleus collision simulations, and the extraction of critical indices from small percolation lattices. Analysis of results from experiments to detect the possible production of anomalous photons in the central rapidity region with transverse momentum between 5 and 50 MeV/c are discussed. Initial work on an experiment to study the high-density, high-temperature state of matter formed in collisions of heavy nuclei at relativistic energies, planned to begin in fall 1997, is related. Finally, work on a research and development project to investigate silicon avalanche diodes as time-of-flight detectors for nuclear and particle physics applications is reviewed. The principle is to detect the ionization of charged particles directly in the Si; feasibility has been demonstrated.

4545 (DOE/ER/40454–T2) **Partial-wave analyses of hadron scattering below 2 GeV: Progress report, May 1992–April 30, 1993.** Arndt, R.A.; Roper, L.D. Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (United States). Dept. of Physics. [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER40454. Order Number DE93004368. Source: OSTI; NTIS; INIS; GPO Dep.

The Center for Analysis of Particle Scattering (CAPS) in the Department of Physics at Virginia Polytechnic Institute and State University has analyzed basic two-body hadron reactions below 2 GeV for the last two decades. Reactions studied were nucleon-nucleon, pion-nucleon, K+-nucleon and pion photoproduction systems. In addition to analyses of these reactions, a computer graphics system (SAID) has been developed and disseminated to over 250 research institutions using VAX computers. The computer-interactive system for disseminating information on basic scattering reactions is also accessible to the physics community through TELNET on the VPI&SU physics department VAX.

4546 (DOE/ER/40651–3) **Experimental studies of elementary particle interactions at high energies: Technical progress report.** Goulianos, K. Rockefeller Univ., New York, NY (United States). 1 Oct 1992. 73p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40651 ;AC02-87ER40325. Grant RGFY 9160;Grant RGFY 9260;Grant RGFY 92128. (RU–92/E-36). Order Number DE93003652. Source: OSTI; NTIS; INIS; GPO Dep.

In the past year, our research program encompassed four major areas: the UA-6 experiment at CERN, the CDF (Collider Detector at Fermilab) experiment at Fermilab, the SDC (Solenoidal Detector Collaboration) experiment of the SSC (Superconducting Super Collider), and an R&D project for the development of High Pressure Gas Calorimetry for high luminosity colliders. The UA-6 experiment studies direct-γ and J/ψ production in pp and $\bar{p}p$ interactions at $\sqrt{s}$ = 22.5 GeV. In the CDF experiment we have concentrated in the plug calorimeter upgrade program, which involves replacing the plug and forward calorimetry with a more compact calorimeter based on scintillator tiles being readout with wave-length shifting (WLS) fibers. In the SDC experiment, we have taken primary responsibility for the Preshower/Shower-Maximum detectors. We wrote the original shower-maximum proposal for the SDC and have contributed to detector simulations, scintillator/WLS-fiber light yield measurements, building prototype preshower and shower-maximum detectors and measuring their performance in a test beam, and developing novel photosensitive devices to read out the fibers. The High Pressure Gas Calorimeter project has been very successful. A prototype parallel plate iron based electromagnetic calorimeter was designed, constructed and tested in an electron beam at Fermilab. The results were very encouraging. We are presently working on a new design, which would be more suitable for the construction of economical, large scale calorimeters, such as those needed for the forward region of SDC and FAD.

4547 (DOE/ER/40682–5) **Measurement of the branching ratio for $D^+ \to \bar{K}^*(892)^0 \mu^+\nu$.** Fermilab E653 Collaboration. Carnegie-Mellon Univ., Pittsburgh, PA (United States). [1992]. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40682. (CMU-HEP–92-10). Order Number DE93002414. Source: OSTI; NTIS; INIS; GPO Dep.

The branching ratio for the decay mode $D^+ \to \bar{K}^{*0} \mu^+\nu$ has been measured with two methods. The first uses $D^0 \to \bar{K}^- \mu^+\nu$ for normalization, and yields the result $B(D^+ \to \bar{K}^{*0} \mu^+\nu) = (3.25 \pm 0.71 \pm 0.75)\%$. From this method we also obtain the direct measurement $\Gamma(D^+ \to \bar{K}^{*0}\mu^+\nu)/\Gamma(D^0 \to K^- \mu^+\nu) = 0.43 \pm 0.09 \pm 0.09$. The second method uses the mode $D^+ \to K^-\pi^+\pi^+$ for normalization and yields $B(D^+ \to \bar{K}^{*0} \mu^+\nu) = 4.18 \pm 0.66 \pm 0.96)\%$. Combining the results of the two methods yields $B(D^+ \to \bar{K}^{*0}\mu^+\nu) = 3.57 \pm 0.96)\%$.

4548 (GSI–92-51(prepr.)) **Two photon physics with heavy-ion collisions and photons produced by channeled electrons.** Schaefer, A. (Frankfurt Univ. (Germany). Inst. fuer Theoretische Physik); Augustin, J.; Best, C.; Klenner, J.; Hofmann, C.; Schneider, S.M.; Solovyov, A.; Greiner, W.; Soff, G. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Aug 1992. 14p. Order Number DE93729017. Source: OSTI; NTIS (US Sales Only); INIS.

Photon-Photon physics at very high energies offers interesting possibilities. One can search for new particles, both for expected ones like the top quark or the higgs particle, as well as exotic ones like supersymmetric particles. It might also be possible to determine important properties of known particles like e.g. the anomalous magnetic moment of the W boson. To do such experiments one needs photons in the 100 GeV range. We investigated two potential sources for such hard photons, namely the equivalent photons of heavy ion collisions and the photons produced in high-energy channeling. (orig.).

4549 (IC–92/209) **$B \to Kl^+l^-$ decay in supersymmetric theories.** Aliev, T.M. (Istanbul Univ., Istanbul (Turkey). Physics Dept.); Yilmaz, O.; Turan, G. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 18p. Grant AFP-92-01-0508. Order Number DE93608349. Source: OSTI; NTIS (US Sales Only); INIS.

In this work, the weak decay $B \to Kl^+l^-$ is studied in the framework of the Standard Model (SM) and the Supersymmetric Model (SUSY). It is found that in some mass regions the contribution of the SUSY to the decay rate is larger than the effects of SM. The numerical values we have obtained for branching ratio (BR) show that it can be measured in future experiments of B-factories. It is also shown that there exists some restriction on the masses of the SUSY particles $m\text{-}bar_g$ and $m\text{-}bar_{3/2}$ which follow from the observed values of BR. (author). 13 refs, 8 figs.

4550 (INP–1540/PH) **A constituent quark model with colour degrees of freedom confronts the data on hadron-nucleus interactions.** Rozanska, M.; Jezabek, M. Institute of Nuclear Physics, Cracow (Poland). Apr 1991. 17p. Grants CPBP 01.03 and 01.09. Order Number DE93608324. Source: OSTI; NTIS (US Sales Only); INIS.

Three version of a model with colour excitations of constituent quarks are examined using inclusive leading proton and antiproton

spectra in nuclear interactions at high energies. The comparison with experimental data excludes the models in which fragmentation into leading final hadrons depends only on the colour charge of constituents in an intermediate system. (author).

4551 (INP–1554/PH) **F_0 (975) meson and the KK-bar threshold effects.** Cannata, F. (Bologna Univ. (Italy). Ist. di Fisica); Dedonder, J.P.; Lesniak, L. Institute of Nuclear Physics, Cracow (Poland). Jul 1991. 10p. Order Number DE93608325. Source: OSTI; NTIS (US Sales Only); INIS.

f_0 (975) meson properties in a vicinity of the KK-bar threshold are studied using the separable potential formalism. The $\pi\pi$ and KK-bar elastic and inelastic cross sections are calculated for the isospin 0 and spin 0 channel. In particular we study KK-bar scattering length, the threshold behaviour of the inelasticity parameter and the branching ratio of the f_0 (975) meson decay. We discuss also the shape of the f_0 (975) lines as a function of the effective mass near KK-bar threshold. A comparison of the theoretical branching ratio with presently available data is done. (author).

4552 (ITP–91-34) **Supercritical pomeron and spin effects in meson-nucleon scattering at high energy.** Akkelin, S.V. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 9p. Order Number DE93608327. Source: OSTI; NTIS (US Sales Only); INIS.

Helicity amplitudes of elastic πN-scattering and charge-exchange scattering in a supercritical pomeron model are calculated. It is shown that the polarization of elastic πN-scattering at fixed transferred momentum decreases as $\approx 1/\ln s$ and the charge-exchange scattering oscillates and tends to a constant with the increasing transferred momentum. 9 refs. (author).

4553 (ITP–91-45) **Cross channels unitarity conditions and equations for form factors.** Glushko, N.I. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 12p. Order Number DE93608328. Source: OSTI; NTIS (US Sales Only); INIS.

The system of algebraic-differential equations for effective radius of the strong interaction and form factor is obtained by the unitary conditions in cross channels. The general solution of this system is found. Several specific cases are investigated, a distinction of the behaviour of fixed-angle differential cross-section due to different unitarization schemes is considered also. 14 refs. (author).

4554 (ITP–91-46) **Representation for the decay constant f_π in gauge theories.** Gusynin, V.P.; Kushnir, V.A. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 20p. Order Number DE93608350. Source: OSTI; NTIS (US Sales Only); INIS.

Using the divergence of the axial-vector current as an interpolating operator for the pion field a representation for the pion decay constant is obtained which is more convenient for numerical calculations. Its connection with Langacker-Pagels and Pagels-Stokar formulae is established and the analysis of the integral equations for the pseudo-scalar vertex is given. In the so-called linearized approximation to the Schwinger-Dyson equation, an exact expression for the Pagels-Stockar formula is obtained during special functions. 15 refs.; 2 figs. (author).

4555 (ITP–91-99) **Odderon dominance in dipole model of hadron elastic scattering.** Martynov, E.S. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 8p. Order Number DE93608329. Source: OSTI; NTIS (US Sales Only); INIS.

The contribution of the multiple Pomeron-Odderon cuts in elastic pp and p-barp scattering amplitudes at fixed transferred momenta is calculated. It is shown that the asymptotic behaviour of the pp- and p-barp- amplitudes is controlled by the parameters of the input Odderon rather than Pomeron, if the slope of Pomeron trajectory is larger than the slope of Odderon trajectory. 15 refs. (author).

4556 (ITP–91-100) **Nonlinear Pomeron and Odderon in elastic re-scatterings.** Akkelin, S.V.; Martynov, E.S. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 13p. Order Number DE93608326. Source: OSTI; NTIS (US Sales Only); INIS.

A supercritical and dipole models of the elastic scattering with nonlinear trajectories of bare Pomeron and Odderon are considered. The unitary constraints on the parameters of the Odderon trajectory are obtained. The multiple Pomeron-Odderon cuts are calculated. Their contribution to the elastic amplitudes are shown to reproduce qualitatively the result obtained previously for the linear Pomeron and Odderon. The essential difference in the crossing-odd properties of supercritical and dipole models is noted. 18 refs. (author).

4557 (LBL–32861) **Introduction to physics studies at an asymmetric e^+e^- B-factory.** Oddone, P.J. Lawrence Berkeley Lab., CA (United States). Sep 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9204126–14: B factories: state of the art in accelerators, detectors, and physics, Stanford, CA (United States), 6-10 Apr 1992). Order Number DE93002573. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper we present a brief summary of the CP violation physics to be undertaken at an asymmetric e^+e^- B factory.

4558 (SLAC–398) **Proceedings of Summer Institute on particle physics: Lepton-Hadron scattering.** Hawthorne, J. (ed.). Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1992. 566p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-910836–: 19. Stanford Linear Accelerator Center (SLAC) summer institute on particle physics, Stanford, CA (United States), 5-16 Aug 1991). Order Number DE93002490. Source: OSTI; NTIS; INIS; GPO Dep.

The nineteenth annual SLAC Summer Institute on Particle Physics took place from August 5 to 16, 1991, attracting 236 participants from 10 different countries. The theme was lepton-hadron scattering, the subjects ranging from the pioneering SLAC-MIT experiments, through the new era of e-p collisions to be ushered in by HERA. Richard Taylor led off the Institute with a historical review of lepton-proton scattering experiments, from Rutherford to the 1960s, while Sid Drell laid out the theoretical framework, in terms of parton distributions and sum rules. Frank Sciulli picked up where Richard Taylor left off, at the discovery of scaling violation, and brought us up to the present. Joel Feltesse and Roberto Peccei described the physics opportunities at HERA, most notably the investigation of the low x behavior of structure functions. Traudl Hansl-Kozanecka reviewed the current experimental status of QCD, at e^+e^- and hadron colliders as well as in deep-inelastic lepton-hadron scattering. Bob Hollebeek lectured on techniques for electromagnetic and hadronic calorimetry. Finally, Bob Siemann gave a series of lectures on the many uses of superconductivity in particle accelerators, from bending magnets at FNAL HERA and the SSC to RF cavities at CEBAF and LEP. Following the school, the topical conference provided us with a spectrum of current experimental and theoretical developments. Lepton-hadron scattering experiments at CERN and Fermilab were well represented. The existence of the 17^0, keV neutrino was debated in two separate talks. We heard the latest results from the CDF and UA2 hadron collider experiments; from the four LEP experiments; and from ARGUS and CLEO. Also presented were overviews of the rare K decay program at BNL, the CP violation experiments at CERN and Fermilab, B physics, neutrino masses and mixings, and precision electroweak theory.

4559 (SLAC-PUB–5902) **First measurement of the left-right cross section asymmetry in Z boson production at E_{cm} = 91.55 GeV.** Rowson, P.C. (Columbia Univ., New York, NY (United States). Dept. of Physics). The SLD Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Nov 1992. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-920837–20: ICHEP-26: 26th International Union of Pure and Applied Physics (IUPAP) conference on high energy physics, Dallas, TX (United States), 6-12 Aug 1992). Order Number DE93004089. Source: OSTI; NTIS; INIS; GPO Dep.

The left-right cross section asymmetry for Z boson production in e^+e^- annihilation (A_{LR}) has been measured at E_{cm} = 91.55 GeV with the SLD detector at the SLAC Linear Collider (SLC) using a longitudinally polarized electron beam. The electron polarization was continually monitored with a Compton scattering polarimeter, and was typically 22%. We have accumulated a sample of ~10,200 Z events. We find that $A^{LR} = 0.100 \pm 0.044 \pm 0.003$ where the first error is statistical and the second is systematic. From this measurement, we determine the weak mixing angle defined at the Z boson pole to be $\sin^2\theta(\text{lept/w}) = 0.2378 \pm 0.0056$.

4560 (SLAC-PUB–5974) **A study of jet rates and measurement of α_s at the Z^0 resonance.** Lauber, J.A. (Colorado Univ., Boulder, CO (United States)). The SLD Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Nov 1992. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (COLO-HEP–293;CONF-921122–1: Meeting of the Division of Particles and Fields of the American Physics Society, Batavia, IL (United States), 10-14 Nov 1992). Order Number DE93004092. Source: OSTI; NTIS; INIS; GPO Dep.

We present jet rates in hadronic decays of Z^0 bosons measured by the SLD experiment at SLAC. The data are analyzed in terms of the JADE and recently proposed Durham algorithms, and are found to be in agreement with the predictions of perturbative QCD plus fragmentation Monte Carlo models of hadron production. Corrected 2, 3 and 4-jet rates are well described by $o(\alpha_s^2)$ perturbative QCD calculations. From fits to the differential 2-jet distribution the strong coupling $\alpha_s(M_Z)$ is measured to be $\alpha_s(M_Z)$ = 0.119 ± 0.002(stat.) ± 0.003(exp.syst.) ± 0.014(theory) (preliminary). The largest contribution to the error arises from the theoretical uncertainty in choosing the QCD renormalisation scale.

4561 (SLAC-PUB–5976) **A test of the flavor independence of α_s at the Z^0 resonance.** Junk, T.R. (Stanford Univ., CA (United States). Dept. of Physics). The SLD Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Nov 1992. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-921122–2: Meeting of the Division of Particles and Fields of the American Physics Society, Batavia, IL (United States), 10-14 Nov 1992). Order Number DE93004093. Source: OSTI; NTIS; INIS; GPO Dep.

We compare the ratio of the strong coupling α_s measured in $Z^0 \rightarrow b\bar{b}$ events to that measured in $Z^0 \rightarrow q\bar{q}(q=u,d,s,c)$ in the SLD experiment at SLAC. $Z^0 \rightarrow b\bar{b}$ events are identified with the aid of a precision silicon vertex detector by requiring that at least three charged tracks pass more than 3.0σ from the Z^0 decay vertex. This method has an estimated efficiency of 54% with a purity of 71%. Jets are identified and counted by clustering charged tracks according to the JADE algorithm. By comparing the 3-jet fraction in tagged events to that in all hadronic events, we extract a preliminary result of $\alpha_s(b)/\alpha_s(udsc) = 1.18 \pm 0.11(stat) \pm 0.05(sys)$.

4562 (BNL–47932) **Introduction to lattice gaugefixing and effective quark and gluon masses.** Bernard, C. (Washington Univ., St. Louis, MO (United States). Dept. of Physics); Soni, A.; Yee, K. Brookhaven National Lab., Upton, NY (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016 ;FG05-91ER40617 ;FG02-91ER40628. (CONF-9206280–2: Workshop on QCD vacuum structure, Paris (France), 1-5 Jun 1992). Order Number DE93001433. Source: OSTI; NTIS; INIS; GPO Dep.

We report on the status of quark and gluon propagators in quenched, gaugefixed lattice QCD. In Landau gauge we find that the effective quark mass in the chiral limit is $M_q \sim 350(40)$MeV. Quark and gluon propagators, the slope of the quark dispersion relation, and effective masses all appear to depend on gauge. A link-chain picture of lattice gaugefixing in the color $N \rightarrow \infty$ and strong coupling limit, where the system becomes almost solvable, supports the gauge variance of these numerical results.

4563 (CBPF-NF–041/91) **On the physical content of the S U(2) Skyrme model.** Mignaco, J.A.; Wulck, S. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1991. 53p. Order Number DE93608376. Source: OSTI; NTIS (US Sales Only); INIS.

The solutions for the Skyrme model in the hedgehog SU (2) representation are analyzed as a function of the parameters of the model. Sum rules obtained from the Euler-Lagrange differential equations are efficient tools for this analysis, and use is made also of the original Derrick's argument regarding stability in a constructive way. (author).

4564 (DESY–92-087) **One loop corrections to the lightest Higgs mass in the minimal η model with a heavy Z'.** Comelli, D. (Trieste Univ. (Italy). Dept. of Theoretical Physics); Verzegnassi, C. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jun 1992. 17p. Order Number DE93728898. Source: OSTI; NTIS (US Sales Only); INIS.

We have evaluated the one loop correction to the bound on the lightest Higgs mass valid in the minimal, E_6 based, supersymmetric η model in the presence of a 'heavy' Z', $M_{Z'} \geq 1$ TeV. The dominant contribution from the fermion sfermion sector increases the 108 GeV tree level value by an amount that depends on the top mass in a way that is largely reminescent of minimal SUSY models. For $M_t \leq 150$ GeV, Msub(t tilde)=1 TeV, the 'light' Higgs mass is always ≤ 130 GeV. (orig.).

4565 (DESY–92-109) **Screening of large exotic scales in the light Higgs mass bound for a general class of supersymmetric models.** Comelli, D. (Trieste Univ. (Italy). Dept. of Theoretical Physics); Verzegnassi, C. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1992. 12p. Order Number DE93728875. Source: OSTI; NTIS (US Sales Only); INIS.

We consider the class of supersymmetric models whose Higgs sector contains a 'conventional' couple of $SU(2)_L$ doublets and an arbitrary number of extra 'exotic' $SU(2)_L xU(1)_y$ neutral Higgs (possibly related to an extra symmetry group G), with a priori arbitrarily large vevs. We show that, as a consequence of the functional structure of the scalar potential (dictated by gauge and supersymmetry invariance), a general property exists in the scalar mass matrix which decouples the lightest Higgs mass from the large vevs effects at tree level. At one loop, we show that, if the fermion-sfermion sector is considered, the analogous property 'screens' the lightest Higgs mass under very general assumptions for the symmetry breaking mechanism. (orig.).

4566 (DOE/ER/40150–200) **What do we know about the Q^2 evolution of the Gerasimov-Drell-Hearn sum rule?.** Burkert, V. (Continuous Electron Beam Accelerator Facility, Newport News, VA (United States)); Li, Z. Southeastern Universities Research Association, Inc., Newport News, VA (United States). [1992]. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84ER40150. (CEBAF-PR–92-017). Order Number DE93000828. Source: OSTI; NTIS; INIS; GPO Dep.

We study contributions from baryon resonance excitations to the Q^2 dependence of the Gerasimov-Drell-Hearn sum rule. The results indicate that the sum rule at small Q^2 is largely saturated by contribution from the lower mass resonant states. We find a strong Q^2 dependence of the resonant contributions, leading even to a sign change of the sum rule integral at $Q^2 \simeq 0.8 GeV^2$. The global Q^2 dependence indicates discrepancies to the interpretation of the EMC polarized structure function data on A_1^p in the resonance region, which can be largely attributed to the elimination of the $P_{33}(1232)$ resonance from the EMC analysis.

4567 (DOE/ER/40682–3) **Neutrino masses and solar neutrinos.** Wolfenstein, L. Carnegie-Mellon Univ., Pittsburgh, PA (United States). Dept. of Physics. [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40682. (CMU-HEP–92-08). Order Number DE93002416. Source: OSTI; NTIS; INIS; GPO Dep.

It has been pointed out by Bahcall and Bethe and others that all solar neutrino data can be explained by MSW oscillations with $m(\nu_\mu) \sim 10^{-3}$ eV consistent with ideas grand unified theories (GUTS). There is a second possibility consistent with GUTS ideas with $m(\nu_\tau) \sim 10^{-2}$ eV and $m(\nu_\mu) \sim 10^{-4}$ eV. The two cases can be distinguished by a measurement of the solar neutrinos from ^7Be.

4568 (IC–92/199) **Radiative electroweak breaking and sparticle spectroscopy with tan $\beta \simeq (m_t)/m_b$.** Ananthanarayan, B. (International Centre for Theoretical Physics, Trieste (Italy)); Shafi, Q.; Lazarides, G. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 17p. Grant DE-FG02-91ER40626;Grant

CRG-910573. (BA–92-29;PRL-TH–92/16.). Order Number DE93608399. Source: OSTI; NTIS (US Sales Only); INIS.

We explore radiative electroweak breaking and the related issue of sparticle spectroscopy within a N=1 supergravity framework in which the Yukawa couplings h_t, h_b and h_τ are unified at the GUT scale. The parameter tanβ of the minimal supersymmetric standard model (MSSM) is constrained to lie close to $(m_t)/m_b >> 1$. With $m_t(m_t)$ > or approx. 130 GeV, analysis based on the renormalization group improved tree level potential shows that in order to achieve a satisfactory radiative breaking, the universal gaugino mass $M_{1/2}$ > or approx. 450 GeV. An upper bound on $M_{1/2}$ of approximately 1250 GeV is obtained from cosmological considerations. This enables us to provide both lower and upper bounds on the sparticle masses of the MSSM. For 130 GeV < or approx. $m_t(m_t)$ < or approx. 160 GeV, the lightest supersymmetric particle, essentially the bino, lies in the range 200 GeV < or approx. m_{LSP} < or approx. 550 GeV. The heaviest sparticles include the gluino (1 TeV < or approx. m_g < or approx. 3.0 TeV) and the squarks of the first two families which typically are about 10-20% heavier. (author). 16 refs, 4 figs.

4569 (IC–92/237) **Covariant Bethe-Salpeter wave functions for heavy hadrons.** Hussain, F. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 8p. Order Number DE93608377. Source: OSTI; NTIS (US Sales Only); INIS.

In recent years the dynamics of heavy mesons and baryons has considerably simplified by the development of the so-called heavy quark effective theory (HQET). A covariant formulation of heavy meson and heavy baryon decays in the leading order of the HQET is presented. The method is based on a Bethe-Salpeter formulation in the limit of the heavy quark mass going to infinity. 15 refs, 4 figs.

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij. 1990. 35p. Order Number DE93608375. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Zeitschrift fuer Physik C.

Effect of mixing in systems of singlet pseudoscalar mesons described by the method of compound interpolating fields of the theoretical-field approach was studied. Decays of light pseudoscalar mesons $n \to \gamma\gamma$, $J/\Psi \to \rho n$, $J/\Psi \to \omega n$, $J/\Psi \to \gamma n$ decays, where $n = \eta, \eta', \eta$" are described, the widths of the decays, values of the ratio of η"- and η'-meson yield cross sections in charge-exchange $\Pi p \to \eta$"N reactions, as well as probabilities of $J/\Psi \to \gamma\eta$" decay, being evaluated. 25 refs.; 1 fig.; 4 tabs.

4571 (ITF–91-34) **Three-neutrino oscillations in matter and topological phases.** Naumov, V.A. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 24p. (In Russian). Order Number DE93608386. Source: OSTI; NTIS (US Sales Only); INIS.

Implicit formulae for topological phases γ_N for system of three mixed Dirac neutrinos, propagating through the matter with arbitrary density and composition distributions, which are not dependent on the parametrization of vacuum mixing matrix V, are derived in the framework of Berry adiabatic approach. It is shown that Berry phases $\gamma_N{}^B$, originating under periodical varying matter parameters, are equal to zero identically, while γ_N not ident to 0 (at special gauge) for non-cyclic evolution under condition that the all matrix elements of V, CP-violating phase and neutrino mass squares differences $m_i{}^2 - m_j{}^2$ ($i \neq j$) are not equal zero simultaneously. Exact formulae for neutrino mixing matrix in the matter and adiabatic evolution operator are found. The recurrent algorithm for calculation of corrections to adiabatic approximation is given. 31 refs. (author).

Thesis. Submitted to Yale Univ., New Haven, CT.

The angular and energy distributions of positive muons μ^+ and muonium M produced by the beam-foil method have been measured for the first time. A 7 MeV/c subsurface μ^+ beam was delivered to our apparatus from the Stopped Muon Channel at the Los Alamos Clinton P. Anderson Meson Physics Facility (LAMPF). The μ^+ formed M by electron capture in a thin Al target foil. A low pressure multi-wire proportional chamber upstream of the target foil was used both as a moderator and as a muon counter. To observe muonium, muons sere swept away by a bending magnet which was placed downstream of the target foil. This magnet was turned off while measuring the μ^+ distribution. Beyond the magnetic field, particles were collimated and then stopped by a microchannel plate detector located at various angles to the incident muon beam axis. Two pairs of scintillators mounted above (St) and below (Sb) the MC-P were used to detect the decay positrons to verify from the lifetime spectrum that the particles detected by the MCP are muons. The intensities of μ^+ and M emerging from the Al foil at different angles were obtained from both a time-of-flight spectrum and a lifetime spectrum.

4573 (LBL–32485) **Precise predictions for neutrino masses and mixings.** Hall, L.J. Lawrence Berkeley Lab., CA (United States). Aug 1992. 7p. Commentary and transparencies of talk given at the Rutherford Appleton Laboratory, 27 May and 3 June 1992.

We give a brief review of some aspects of the physics of massive neutrinos. In the first part, in addition to the main phenomenological consequences of lepton mixing, are shown some of the principal models of neutrino masses based on $SU(2)_L xU(1)$, in the context of left-right symmetric models, and in the "standard" Grand Universal Theories (GUTs) (SU(5), SO(10)). In the second part, we review the lepton sector in the framework of a particular Universal Seesaw Model which may also include the 17 keV neutrino. In the last part, some recent results obtained in the context of the "flipped" SU(5)xU(1) and the SU(4)xO(4) Superstring Inspired GUT models are discussed. (author).

4575 (SLAC-PUB–5977) **New measurements of the τ lepton mass.** Marsiske, H. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9209270–1: 2. workshop on tau lepton physics, Columbus, OH (United States), 8-11 Sep 1992). We report on recent measurements of the mass of the τ lepton, performed by the ARGUS, BES and CLEO experiments.

4576 (UCRL-LR–110897) **Measurements of the electric and magnetic form factors of the neutron and their dependence on inelastic modeling.** Stuart, L.M. Lawrence Livermore National Lab., CA (United States). Jun 1992. 250p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93001625. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to University of California, Davis.

The charge and magnetic elastic form factors of the neutron, $G_{En}(Q^2)$ and $G_{Mn}(Q^2)$, have been measured in the four-momentum transfer range $1.75 < Q^2 < 4.00$ (GeV/c)^2 using a Rosenbluth separation. These measurements constitute part of performed at the End Station A experiment NE11 which was facilities at the Stanford Linear Accelerator Center in the winter of 1989. The results show that $G_{Mn}(Q^2)/\mu_n$, $G_D(Q_2)$ is consistent with unity, where μ_n, is the neutron anomalous magnetic moment, and $G_D(Q^2) = (1.0 + Q^2/0.71)^{-2}$, is the empirical dipole formula. The results for $(G_{En}(Q^2)/G_D(Q^2))$ are consistent with zero within errors. The extraction of the neutron electromagnetic form factors from deuterium cross sections is a model dependent procedure because of the

Fermi momentum of the bound nucleons. In addition to the smeared quasielastic cross section, there is an inelastic tail due to pion production which extends into the quasielastic region. This tail is significant and must be subtracted to measure the neutron form factors. An extensive study has been made on the effect of the modeling of this tail on the measured form factors using different Fermi smearing models, off-mass-shell corrections, and deuteron wave functions. The off-mass-shell-effects were the largest, but still smaller than the experimental error. Comparisons were made with many theoretical models. Measurements were also obtained of the $\Delta(1232)$ resonance transition form factors in the range $1.6 < Q^2 < 6.75$ $(GeV/c)^2$.

4577 (BNL–47935) **Effective charges, the valence p-n interaction, and the IBM.** Casten, R.F. (Brookhaven National Lab., Upton, NY (United States)); Wolf, A. Brookhaven National Lab., Upton, NY (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9208168–1: 7. symmetries in science: spectrum generating algebras and dynamic symmetries in physics, Nakajo (Japan), 28-31 Aug 1992). Order Number DE93001436. Source: OSTI; NTIS; INIS; GPO Dep.

There are three recent themes in nuclear structure that come together in an interesting and useful way via the concept of effective charges and the framework of the IBM. These three concepts are the importance of dynamical symmetries in describing nuclear structure and the benefits that accrue from their exploitation, secondly, the critical role of the p-n interaction in the onset and development of collectivity in nuclei, and, thirdly, the importance of the valence nucleons in determining structure and its evolution. We will illustrate this by showing that the interpretation of measured B(E2) values in the context of the dynamical symmetries of the IBM leads to new insights into the meaning of effective charges and offers new avenues to understand the role of the proton-neutron (p-n) interaction in modulating the nature of the valence space and the growth of collectivity. In particular, we will show that effective charges in valence models, such as the IBM, can be interpreted in terms of derivatives of the collectivity of the low lying levels, that is, as measures of the rate of change of collectivity as the proton and neutron numbers vary. This paper is based on recent work by the authors.

4578 (DOE/ER/40365–6) **Theoretical studies in medium-energy nuclear and hadronic physics.** Horowitz, C.J.; Macfarlane, M.H.; Matsui, T.; Serot, B.D. Indiana Univ., Bloomington, IN (United States). [1993]. 85p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-87ER40365. Order Number DE93004373. Source: OSTI; NTIS; INIS; GPO Dep.

A proposal for theoretical nuclear physics research is made for the period April 1, 1993 through March 31, 1996. Research is proposed in the following areas: relativistic many-body theory of nuclei and nuclear matter, quasifree electroweak scattering and strange quarks in nuclei, dynamical effects in (e,e′p) scattering at large momentum transfer, investigating the nucleon's parton sea with polarized leptoproduction, physics of ultrarelativistic nucleus–nucleus collisions, QCD sum rules and hadronic properties, non-relativistic models of nuclear reactions, and spin and color correlations in a quark-exchange model of nuclear matter. Highlights of recent research, vitae of principal investigators, and lists of publications and invited talks are also given. Recent research dealt primarily with medium-energy nuclear physics, relativistic theories of nuclei and the nuclear response, the nuclear equation of state under extreme conditions, the dynamics of the quark–gluon plasma in relativistic heavy-ion collisions, and theories of the nucleon–nucleon force.

Inst. fuer Kernphysik); Zilges, A.; Herzberg, R.D.; Zamfir, N.V.; Kneissl, U.; Heil, R.D.; Pitz, H.H.; Wesselborg, C. Brookhaven National Lab., Upton, NY (United States). [1992]. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920555–3: 4. international spring seminar on nuclear physics: the building blocks of nuclear structure, Amalfi (Italy), 18-22 May 1992). Order Number DE93001441. Source: OSTI; NTIS; INIS; GPO Dep.

From many experiments with low energy photon scattering on deformed rare earth nuclei we have obtained detailed information about the distribution of electric dipole strength below 4 MeV. Apart from some weaker transitions between 2 and 4 MeV we observed one, and sometimes two, very strong El-groundstate transitions around 1.5 MeV in all examined nuclei. They arise from the de-excitation of the bandheads of the $(J^{\pi},K)=(1^-,0)$ and $(J^{\pi},K)=(1^-,1)$ octupole vibrational bands. It is shown that the decay branching ratios and the absolute transition strengths of these states can be reproduced rather well with an improved T(El)-operator in the sdf-Interacting Boson Model. Another class of octupole states has been investigated in the region of the semimagic nucleus ^{142}Nd. Here a quintuplet of collective excitations around 3.5 MeV is expected due to the coupling of the 3^--octupole vibration with the 2^+-quadrupole vibration. We performed photon scattering experiments on the odd A neighboring nucleus ^{141}Pr and found first evidence for the existence of $3^-\otimes 2^+\otimes$particle-states.

4580 (CONF-920113–9) **Memory effects in damping of collective vibrations.** Ayik, S. (Tennessee Technological Univ., Cookeville, TN (United States)); Boilley, D. Oak Ridge National Lab., TN (United States). [1992]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;FG05-89ER40530. From 8. winter workshop on nuclear dynamics; Jackson Hole, WY (United States); 18-25 Jan 1992. Order Number DE93002359. Source: OSTI; NTIS; INIS; GPO Dep.

In this work we calculate the spreading width of collective vibrations due to collisional damping in the basis of a semi-classical transport equation with a memory dependent collision term. We obtain a simple analytical expression which provides a reasonable description for the observed damping widths of isoscalar and isovector giant resonances in medium mass and heavy nuclei at zero temperature, as well as at finite temperatures.

4581 (CONF-9205108–17) **New vistas in superdeformation.** Nazarewicz, W. (Joint Inst. for Heavy Ion Research, Oak Ridge, TN (United States)). Oak Ridge National Lab., TN (United States). [1992]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;FG05-87ER40361. An aerial radiological survey was conducted from July 11–20, 1990, over an 83-square-kilometer (32-square-mile) area surrounding the Portsmouth Gaseous Diffusion Plant located near Portsmouth, Ohio. The survey was conducted at a nominal altitude of 91 meters (300 feet) with line spacings of 122 meters (400 feet). A contour map of the terrestrial gamma exposure rate extrapolated to 1 meter above ground level (AGL) was prepared and overlaid on an aerial photograph and a set of United States Geological Survey (USGS) topographic maps of the area. The terrestrial exposure rates varied from about 7 to 14 microroentgens per hour (μR/h) at 1 meter above the ground. Analysis of the data for man-made sources and for the uranium decay product, protactinium-234m (^{234m}Pa), showed five sites within the boundaries of the Portsmouth Gaseous Diffusion Plant with elevated readings. Spectra obtained in the vicinity of the buildings at the Portsmouth Gaseous Diffusion Plant showed the presence of ^{234m}Pa, a uranium-238 (^{238}U) decay product. In addition, spectral analysis of the data obtained over the processing plant facility showed gamma activity indicative of uranium-235 (^{234}U). No other man-made gamma ray emitting radioactive material was detected, either on or off the Portsmouth Gaseous Diffusion Plant property. Soil samples and pressurized ion chamber measurements were obtained at five different locations within the survey boundaries to support the aerial data.

4582 (CTA-IEAV-RI–007/83) **Parastatistics as a nuclear structure effective description.** Mastroleo, R.C. Centro Tecnico Aeroespacial (CTA-IEAv), Sao Jose dos Campos, SP (Brazil). Inst.

This work describes the parastatistics when used to describe the nuclear structure. It is able to describe very well, all the effects originating from the internal structure of complex systems. (A.C.A.S.).

4583 (DOE/ER/40330–64) **Nuclear structure from radioactive decay: Annual progress report.** Wood, J.L. Georgia Inst. of Tech., Atlanta, GA (United States). School of Physics. 30 Sep 1992. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-87ER40330. Order Number DE93002795. Source: OSTI; NTIS; INIS; GPO Dep.

The most important aspect of the wind-up of UNISOR-based research is completion of student theses. Analysis is proceeding on extensive studies in the neutron-deficient rare earth isotopes with $N < 82$ and the neutron-deficient region below $Z = 82$. These studies address the onset of deformation in the $N < 82$, $Z > 50$ open shell region and shape coexistence in the $N \sim 104$, $Z \leq 82$ region, respectively. The main ongoing topics are shape coexistence in nuclei and the microscopic structure of collective motion in nuclei from a phenomenological point of view. New topics this year focus on the structure of nuclei near the $N = Z$ line. Two topics have been chosen for detailed study: shape coexistence and electric monopole transition strengths.

4584 (DOE/ER/40418–5) **Nuclear structure studies: Progress report.** Walters, W.B. Maryland Univ., College Park, MD (United States). Dept. of Chemistry. 31 Aug 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER40418. Order Number DE93002791. Source: OSTI; NTIS; INIS; GPO Dep.

New results are reported for the decay and nuclear orientation of ^{114,116}I and ^{114}Sb as well as data for the structure of daughter nuclides ^{114,116}Te. New results for IBM-2 calculations for the structure of ^{126}Xe are also reported. A new approach to the problem of the underproduction of $A = 120$ nuclides in the astrophysical r-process is reported.

4585 (GSI–92-18(prepr.)) **Relativistic Fock diagrams at finite density.** Henning, P.A. (Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik). Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Mar 1992. 32p. Order Number DE93728962. Source: OSTI; NTIS (US Sales Only); INIS.

Within a simple relativistic field theory coupling scalar mesons and nucleons, analytical expressions are derived for the Fock self energy amplitudes at finite baryon density. The strong coupling required to model nuclear matter turns out to be near a critical value, beyond which a perturbation expansion in such system breaks down. This has the effect of shifting the Landau ghost poles of the perturbative propagator to rather low energies. The removal of these unphysical poles can be achieved either at the level of propagators or at the level of self energy amplitudes. In the latter case, the removal of the ghost poles is shown to have a big effect on the self energies because of the coupling strength. (orig.).

4586 (IFT-P–010/92) **Three-body collapse for Tabakin potentials and the Thomas effect.** Delfino, A. (Universidade Federal Fluminense, Niteroi, RJ (Brazil). Dept. de Fisica); Adhikari, S.K.; Tomio, L. Instituto de Fisica Teorica (IFT), Sao Paulo, SP (Brazil). Mar 1992. 18p. Order Number DE93608412. Source: OSTI; NTIS (US Sales Only); INIS.

A system constituted of three bosons interacting via two-body separable potentials with fixed two-boson binding is known to lead to bound state collapse in the case where the potential parameters allow two-boson S matrix poles close to (resonance) and on (continuum bound state) the real momentum axis. The collapse is shown to be accompanied by an increase in the average kinetic energy of the two-body bound state, which signals a decrease in the range of the two-body interaction for fixed two-body binding. The collapse is claimed to be a manifestation of the well-known Thomas effect which leads to a collapse of the three-body system when the range of the two-body interaction goes to zero for a fixed two-body binding. (author).

The IAEA Nuclear Data Section convened the ninth meeting of the international nuclear structure and decay data network at Kuwait, 10-14 March 1990. The meeting was attended by 19 scientists from 9 Member States and two international organizations, concerned with the compilation, evaluation, and dissemination of nuclear structure and decay data. The document contains a summary and the proceedings of the meeting, and in annexes, status reports of activities in nuclear structure and decay data from the participating centers. A separate abstract was prepared for one of the scientific lectures related to the topics of the meeting which is reproduced in full length. Refs, figs and tabs.

4589 (INP–1543/PL) **Clustering of 1p-shell nuclei in the framework of the shell model.** Kwasniewicz, E. (Uniwersytet Slaski, Katowice (Poland). Inst. Fizyki). Institute of Nuclear Physics, Cracow (Poland). 1991. 54p. Contracts CPBP 01-09 and P/04/134/90-2. Order Number DE93608434. Source: OSTI; NTIS (US Sales Only); INIS.

The two- and three-fragment clustering of the 1p-shell nuclei has been studied in the framework of the shell model. The absolute probabilities of the required types of clustering in a given nucleus have been obtained by projecting its realistic shell-model wavefunction onto the suitable subspace of the orthonormal, completely antisymmetric two- or three-cluster states. With the aid of these data the selectivity in population of final states produced in multinucleon transfer reactions has been discussed. This problem has also been considered in the approach where the exchange of nucleons between clusters has been neglected. This has enabled to demonstrate the role of the complete antisymmetrization in predicting the intensities of states populated in multinucleon transfer reactions. The compact theory of the multinucleon one- and two-cluster spectroscopic amplitudes has been formulated. The examples of studying the nuclear structure and reactions with the aid of these spectroscopic amplitudes have been presented. (author).

4590 (KIYal–91-1) **One-nucleon integrals of overlap of wave functions of lightest nuclei.** Voloshin, N.I.; Levshin, E.B.; Fursa, A.D. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. 23p. (In Russian). Order Number DE93608435. Source: OSTI; NTIS (US Sales Only); INIS.

The integrals of overlap of wave functions of ^{4}He nucleus with wave functions of He and ^{3}He nuclei were calculated. To describe nucleus structure the model wave functions of two types were used. In one case the complete wave nucleus function was selected as a production of one-particle functions, presenting Gaussian superposition. In other case the multiparticle wave functions of nuclei were selected at once in translation-invariant form and it also had the Gaussian dependence. The parameters of nucleus wave functions were found using description conditions of the experimental values of charge radii and form-factors of nuclei up to $q^2 <= 30 fm^{-2}$. During the calculation the charge distribution in the proton and neutron was taken into account. 23 refs.; 8 figs.; 4 tabs. (author).

4591 (KIYal–91-4) **On stable nuclei mass charge distribution.** Lendel, A.I.; Marinets, T.I.; Sikora, D.I.; Charnovich, E.I.; Yankanich, M.M. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. 8p. (In Russian). Order Number DE93608414. Source: OSTI; NTIS (US Sales Only); INIS.

The charge distribution of mass averaged stable nuclei about trajectory that cross the points with proton and neutron numbers nearly magic is investigated. It is shown that the charge distribution of ΔM have a symmetric property on nucleus charge z=45 and mass number A=103. The distribution of ΔM is compared with charge distribution of product of ^{206}Th fission in framework of statistic model. 4 refs.; 1 fig. (author).

4592 (LA-UR–92-3189) **Nuclear masses and fission barriers for astrophysical applications.** Moeller, P. (Los Alamos National Lab., NM (United States)); Nix, J.R.; Kratz, K.L.; Woehr, A.; Thielemann, F.K. Los Alamos National Lab., NM (United States). [1992]. 21p. Sponsored by USDOE, Washington, DC (United States); Deutsche Forschungsgemeinschaft, Bonn (Germany). DOE Contract W-7405-ENG-36. (CONF-9209239–1: Workshop on nuclear physics in the universe, Oak Ridge, TN (United States), 24-26 Sep 1992). Order Number DE93000869. Source: OSTI; NTIS; GPO Dep.

We review the current status of the macroscopic-microscopic method for calculating nuclear masses, fission barriers and other nuclear-structure quantities of interest in astrophysical applications. We discuss what would be some minimal requirements of a nuclear mass model and study how the macroscopic-microscopic method and other nuclear mass models fullfil such basic requirements. Finally, we discuss some results of astrophysical calculations based on macroscopic-microscopic nuclear-structure models.

4593 (LUND-MPH–92-01) **Interaction strength of two crossing bands.** Hagemann, G.B. (Niels Bohr Inst., Copenhagen (Denmark)); Hamamoto, Ikuko. Lund Univ. (Sweden). Dept. of Mathematical Physics. Apr 1992. 19p. Order Number DE93608436. Source: OSTI; NTIS; INIS.

The interaction strengths of the ground band with the S-band are extracted by using observed states of both bands as well as observed relative E2 transition rates for γ-decay to yrast and non-yrast states. The signature dependence of the strength observed in the negative-parity yrast sequences of ^{157}Ho is explained, first when a relatively strong n-p Q" x Q" interaction is introduced in the conventional axially-symmetric particle-rotor model. The Q" x Q" interaction is supposed to take care of the possible shape-driving effect due to the presence of aligned quasiparticles. (au).

4594 (SINS–2111/P-8/PL/B) **Collective properties of octupole-deformed atomic nuclei.** Boening, K. Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland). Mar 1991. 76p. (In Polish). Order Number DE93608415. Source: OSTI; NTIS (US Sales Only); INIS.

Report received in March 1992.

Collective properties of even-even nuclei in the radium region are studied theoretically. Energy of the lowest collective states and reduced probabilities B(E2) and B(E3) of electromagnetic transitions between these states are mainly analysed. The excited states are treated as large-amplitude quadrupole and octupole vibrations coupled with each other. A large anharmonicity of the spectrum and a large value B(E3) of the transition from the first octupole excited state to the ground state are obtained, for octupole-deformed nuclei. A strong dependence of the results on the shape of the potential energy of a nucleus, treated as a function of its deformation, is stressed. (author).

4595 (UCRL-JC–109942) **Superdeformation in the A = 190 region: The lead nuclei.** Henry, E.A. (Lawrence Livermore National Lab., CA (United States)); Becker, J.A.; Brinkman, M.J.; Kuhnert, A.; Stoyer, M.A.; Wang, T.F.; Yates, S.W.; Azaiez, F.A.; Beausang, C.W.; Burde, J.; Deleplanque, M.A.; Diamond, R.M.; Draper, J.E.; Kelly, W.H.; KortLawrence Livermore National Lab., CA (United States). Jul 1992. 8p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract W-7405-ENG-48 ;AC03-76SF00098. (CONF-9205108–16: International conference on nuclear structure at high angular momentum, Ottawa (Canada), 18-21 May 1992). Order Number DE93001321. Source: OSTI; NTIS; INIS; GPO Dep.

Superdeformed (SD) bands have been identified in the four even-even lead nuclei ^{192}Pb, ^{194}Pb, ^{196}Pb, and ^{198}Pb. The discovery of SD bands in these nuclei extended the region of superdeformation in the A = 190 region to Z = 82, and to neutron numbers up to N = 116. All of the SD bands in these nudei are observed with transition energies ranging from about 250 key to about 600 keV, with the lowest energy SD band transition for the entire region of 169 keV in ^{194}Pb. The spins deduced for the lowest levels in the SD bands are (10,11), 6,8, and 12 for ^{192,194,196,198}Pb, respectively. The dynamic moments of inertia of ^{192}Pb and ^{194}Pb are similar to each other, and to those of many other SD bands in this mass region. The dynamic moments of inertia of ^{196}Pb and ^{198}Pb are somewhat lower than those of ^{192,194}Pb at a given frequency. The experimental lifetimes in ^{194}Pb and the deduced transition quadrupole moments are equal to those of other nudei in the region within errors. While SD bands have been observed in the odd-neutron Hg and Tl nuclei, SD bands have not been reported for the odd-neutron Pb nuclei. In this contribution we discuss briefly three topics on superdeformation in the lead nuclei. First, we have recent experimental data on ^{196}Pb that extends our knowledge of the SD band in that nucleus. Next we review briefly the population of low-lying yrast levels from the decay of the SD bands in ^{192,194,1296}Pb. Finally, we summarize our efforts to identify superdeformation in the odd-A Pb nuclei. All of the experiments described here were performed using the HERA spectrometer at the 88-Inch Cyclotron facility located at Lawrence Berkeley Laboratory.

4596 (CONF-9210192–1) **Lifetimes in ^{15}N from gamma-ray line shapes produced in the ^{14}N(thermal n,γ) reaction.** Raman, S. (Oak Ridge National Lab., TN (United States)); Jurney, E.T.; Starner, J.W.; Kuronen, A.; Keinonen, J. Oak Ridge National Lab., TN (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Workshop on applications of high resolution gamma spectroscopy in studies of atomic collisions and nuclear lifetimes; Grenoble (France); 5-7 Oct 1992. Order Number DE93001709. Source: OSTI; NTIS; INIS; GPO Dep.

Mean lifetimes of bound levels in ^{15}N were inferred from the primary γ-ray-induced Doppler broadening (GRID) of secondary γ rays in the thermal-neutron capture reaction ^{14}N(n,γ). GRID measurements were made with melamine ($C_3H_6N_6$) as both target and slowing-down medium. The Doppler-broadened γ-ray line shapes were analyzed by molecular dynamics simulations of the slowing-down process to obtain the lifetime values for four states in ^{15}N. Preliminary results will be shown.

4597 (INDC(NDS)–250/G,ND, pp. 132) **Signature dependence of M1 and E2 transition probabilities for the $i_{13/2}$ and $f_{7/2}$ rotational band in ^{161}Dy, ^{163}Dy, ^{167}Er and ^{173}Yb studied by heavy-ion Coulomb excitation: Annex 17.** Hashizume, A. (Institute of Physical and Chemical Research, Wako, Saitama (Japan)). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Nov 1991. (CONF-9003331–: IAEA consultants' meeting of the participants in the international network of nuclear structure and decay data evaluators, Kuwait (Kuwait), 10 Mar 1990). 4599 (SINS–2093/P-8/PH/B) **Stability of the heaviest atomic nuclei.** Patyk, Z. Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland). Jul 1990. 57p. (In Polish). Order Number DE93608441. Source: OSTI; NTIS (US Sales Only); INIS.

Calculations of the alpha-decay and the spontaneous-fission of the heaviest nuclei are described. Main attention is given to the presentation of the results of the author, obtained in recent few years. One of the important modification, with respect to earlier studies, is the use of a multidimensional deformation space, which is especially important for the calculation of the fission barrier. Even-even nuclei with atomic number Z=92-110 are considered. Much attention is paid to the description of shell effects in the half-lives. These effects are especially important for the heaviest nuclei as they decide the question of their existence. (author).

4600 (CBPF-NF–040/91) **Tetrahedral percolation model and energy spectra of nuclear fragmentation.** Santiago, A.J.; Chung, K.C. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1991. 10p. Order Number DE93608449. Source: OSTI; NTIS (US Sales Only); INIS.

A Monte Carlo simulation based on the so-called tetrahedral percolation model is shown to reproduce very satisfactorily the experimental data from high-energy proton-induced reactions. This suggests that the main features of nuclear fragmentation may be understood by geometric and probabilistic considerations only. (author).

4601 (GSI–92-39(prepr.)) **Isotopic effects in the disassembly of hot nuclear systems.** Lozhkin, O.V. (V.G. Khlopin Radium Inst., St. Petersburg (Russia)); Trautmann, W. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Jun 1992. 30p. Order Number DE93728817. Source: OSTI; NTIS (US Sales Only); INIS.

The analysis of isotopic effects in the production of intermediate mass fragments from light-ion induced reactions on heavy nuclei reveals a high degree of equilibration in the isotopic degree of freedom. The observed effects are quantitatively reproduced by the quantum statistical model based on chemical equilibrium. The nearly identical isotopic yield ratios for reactions induced by light ions (p, d, α) of several GeV and by heavy ions (^{12}C, ^{14}N, ^{18}O) of 30-100 MeV/u suggest that the statistical parameters of the hot nuclear systems produced in both types of reactions are very similar. (orig.).

4602 (IFT-P–015/92) **Model independence of scattering of three identical bosons in two dimensions.** Adhikari, S.K. (Instituto de Fisica Teorica (IFT), Sao Paulo, SP (Brazil)); Tomio, L.; Delfino, A.; Frederico, T. Instituto de Fisica Teorica (IFT), Sao Paulo, SP (Brazil). May 1992. 26p. Order Number DE93608450. Source: OSTI; NTIS (US Sales Only); INIS.

Within the framework of scattering integral equations in momentum space we present numerical results of scattering of three-identical bosons at low energies in two dimensions for short-range separable potentials. An analysis of the present numerical results reveal the three-particle scattering observables to be independent of potential shape provided the low-energy two-particle binding energy and scattering length are held fixed throughout the investigation. (author).

4603 (INIS-BR–3030) **Elastic scattering of gamma radiation in solids.** Goncalves, O.D. Universidade Federal, Rio de Janeiro, RJ (Brazil). Inst. de Fisica. 1987 139p. (In Portuguese). Order Number DE93608451. Source: OSTI; NTIS (US Sales Only); INIS.

The elastic scattering of gamma rays in solids is studied: Rayleigh scattering as well as Bragg scattering in Laue geometries. We measured Rayleigh cross sections for U, Pb, Pt, W, Sn, Ag, Mo, Cd, Zn, and Cu with gamma energies ranging from 60 to 660 KeV and angles between 5^0 and 140^0. The experimental data are compared with form factor theories and second order perturbation theories and the limits of validity of both are established. In the 60 KeV experiment, a competition between Rayleigh and Bragg effects is found in the region of low momentum transfer. The Bragg experiments were performed using the gamma ray diffractometer from the Hahn-Meitner Institut (Berlin) with gammas of 317 KeV and angles up to 2^0. In particular, we studied the effect of annealing in nearly perfect Czochralski Silicon crystals with high perfection in the crystallographic structure. The results are compared with Kinematical and Dynamical theories. (author).

4605 (WHC-SA–1430) **MOCAL, a Monte Carlo albedo code.** Morford, R.J.; Carter, L.L.; Siciliano, E.R. Westinghouse Hanford Co., Richland, WA (United States). Jan 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-920431–29: Meeting on new horizons in radiation protection and shielding, Pasco, WA (United States), 26 Apr - 1 may 1992). Order Number DE93002049. Source: OSTI; NTIS; GPO Dep.

The MOCAL code is a Monte Carlo code that uses pre-existing albedo data files to determine neutron penetrations into shielding air gaps. By using the albedos along the bounding surfaces of the gaps, expensive computational tracking of neutrons through material regions is eliminated. Thus, the run-time for MOCAL is relatively short, compared to conventional Monte Carlo methods of tracking neutrons completely through the materials. Also as a result of this albedo treatment, MOCAL is very easy to use, with the time required to prepare a typical input data file to be less than 15 minutes in most cases.

Neutron differential elastic- and inelastic-scattering cross sections are measured from $\approx$ 1.5 to 10 MeV with sufficient detail to define the energy-averaged behavior of the scattering processes. Neutrons corresponding to excitations of 465 $\pm$ 23, 737 $\pm$ 20, 1017 $\pm$ 34, 1251 $\pm$ 20, 1432 $\pm$ 23 and 1692 $\pm$ 25 keV are observed. It is shown that the observables, including the absorption cross section, are reasonably described with a conventional optical-statistical model having energy-dependent geometric parameters. These energy dependencies are alleviated when the

model is extended to include the contributions of the dispersion relationship. The model parameters are conventional, with no indication of anomalous behavior of the neutron interaction with ^{45}Sc, five nucleons from the doubly closed shell at ^{40}Ca.

4607 (CBPF-NF–032/91) **Fluctuation effects on bubble growth in hot nuclear matter.** Santiago, A.J.; Chung, K.C. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1991. 15p. Order Number DE93608479. Source: OSTI; NTIS (US Sales Only); INIS.

The evolution of bubbles with arbitrary density in an infinite nuclear system is studied in a simplified treatment. Kinetic pressure fluctuations on the bubble surface are considered. The critical radius, evolution time and probability for bubble expansion are shown to depend significantly on the initial bubble density. (author).

4608 (CONF-921046–4) **Equilibrium and pre-equilibrium models for calculation of particle emission cross sections and spectra.** Fu, C.Y. Oak Ridge National Lab., TN (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on nuclear data evaluation methodology; Upton, NY (United States); 12-16 Oct 1992. Order Number DE93001635. Source: OSTI; NTIS; INIS; GPO Dep.

Improvements of equilibrium and pre-equilibrium models that have been applied to the evaluations of the recently released nuclear data libraries are reviewed. The improvements include energy-angle correlated neutron emission in the continuum, charged-particle and recoil spectra, widths-fluctuation correction for the continuum, pre-equilibrium capture, and gamma-ray strength functions. Their impacts on evaluated data are summarized.

4609 (DOE/ER/40246–7) **Neutrons scattering studies in the actinide region: Progress report, August 1, 1991–July 31, 1992.** Kegel, G.H.R.; Egan, J.J. Lowell Univ., MA (United States). Radiation Lab. Sep 1992. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40246. Order Number DE93003655. Source: OSTI; NTIS; INIS; GPO Dep.

During the report period were investigated the following areas: prompt fission neutron energy spectra measurements; neutron elastic and inelastic scattering from ^{239}Pu; neutron scattering in ^{181}Ta and ^{197}Au; response of a ^{235}U fission chamber near reaction thresholds; two-parameter data acquisition system; "black" neutron detector; investigation of neutron-induced defects in silicon dioxide; and multiple scattering corrections. Four Ph.D. dissertations and one M.S. thesis were completed during the report period. Publications consisted of three journal articles, four conference papers in proceedings, and eleven abstracts of presentations at scientific meetings. There are currently four Ph.D. and one M.S. candidates working on dissertations directly associated with the project. In addition, three other Ph.D. candidates are working on dissertations involving other aspects of neutron physics in this laboratory.

This report summarizes the work carried out by personnel from the University of Texas at Austin at the Los Alamos Clinton P. Anderson Meson Physics Facility (LAMPF). The research activities involved experiments done with the Energetic Pion Channel and Spectrometer (EPICS), the Low Energy Pion Channel (LEP), the Pion and Particle Physics Channel (P^3), the High Resolution Spectrometer (HRS), and planning a new experimental program associated with the new high-resolution Neutral Meson Spectrometer (NMS) at LAMPF. A brief overview of work supported by this grant is given followed by an account of the study of the double giant resonances in pion double charge exchange on ^{51}V, ^{115}In, and ^{197}Au. This report contains a list of published papers and preprints, abstracts, and invited talks. These papers summarize experiments involving participants supported by this grant and indicate the work accomplished by these participants in this program of medium energy nuclear physics research. Lists of the most recent proposals on which we have participation at LAMPF, proposals which have been approved this past year to run as experiments, personnel who have participated in this research program are included. The research cited in this report is, in many cases, the collaborative effort of many groups associated with research at LAMPF.

Order Number DE93003661. Source: OSTI; NTIS; INIS; GPO Dep.

New experimental results are given for proton elastic and inelastic cross sections for $^{182,186}W$ at 650 MeV, ^{208}Pb and $^{60}Ni(p,t)$ cross sections at 120 MeV, a coincidence study of the $^{40}Ca(\vec{p},2p)$ reaction. In addition to the above, data reduction and analysis are also being carried out as follows: global analysis of ^{28}Si and $^{58}Ni(\vec{p},p')$ data at 135, 178, 333, 500, and 800 MeV for high-spin stretched states using medium modified interactions (conventional and QCD effective mass modifications); analysis of $^{206,207,208}Pb(\vec{p},p)$ elastic data at 650 MeV. Work on development of techniques to study relativistic effects of proton–nucleus scattering at forward angles and extended angular range of S_{nn} measurements in ^{40}Ca was also carried out.

4612 (ECN-RX–92-023) **Revision of JEF-2 evaluations for the long-lived fission products ^{129}I and ^{99}Tc: Presented at the NEA Specialist' Meeting on Fission Product Nuclear Data, JAERI, Japan, 25-27 May 1992.** Kamp, H.A.J. van der (Netherlands Energy Research Foundation (ECN), Petten (Netherlands)); Gruppelaar, H. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). May 1992. 14p. (CONF-9205255–: NEA specialists meeting on fission product nuclear data, Tokyo (Japan), 25 May 1992). Order Number DE93608467. Source: OSTI; NTIS; INIS.

This paper describes revisions of the neutron radiative capture cross-sections of ^{129}I and ^{99}Tc for JEF-2.2. For ^{129}I the main revision was the modification of resonance parameters at negative energy to fit the most recent experimental values of thermal cross-section and resonance integral, measured by Friedmann et al. This leads to a large increase in the thermal cross-section from 27b to 33.9b and a slight increase in the resonance integral from 28.8b to 30.6b. The revision of ^{99}Tc consists of adopting the first two resonances from the work of Fischer, leading to a value of the resonance integral of about 300b, which is lower than the recommended value of the Brookhaven compilation. (author). 23 refs.; 2 figs.; 4 tabs.

4613 (GSI–92-17(prepr.)) **Statistical fragmentation of Au projectiles at E/A=600 MeV.** Hubele, J. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)); Kreutz, P.; Lindenstruth, V.; Adloff, J.C.; Begemann-Blaich, M.; Kunde, G.J.; Liu, Z.; Lynen, U.; Meijer, R.J.; Milkau, U.; Mueller, W.F.J.; Ogilvie, C.A.; Pochodzalla, J.; Sann,Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Mar 1992. 17p. Order Number DE93728959. Source: OSTI; NTIS (US Sales Only); INIS.

The mean multiplicity of intermediate mass fragments (M_{IMF}) produced by fragmentation of Au projectiles interacting with targets of C, Al, Cu and Pb at an incident energy of E/A = 600 MeV is compared to predictions of statistical multifragmentation and sequential evaporation models. The initial conditions for the calculations were provided by BUU simulations. In the high excitation energy regime the observed universal correlation between (M_{IMF}) and the total charge Z_{bound} of projectile fragments with charges $Z \geq 2$ can not be reprocuced by the sequential evaporation code GEMINI. The data are well described by statistical decay calculations which assume the formation of an expanded nuclear system and a rather fast break-up. (orig.).

4614 (GSI–92-23(prepr.)) **Charge correlations as a probe of nuclear disassembly.** Kreutz, P. (Frankfurt Univ. (Germany). Inst. fuer Kernphysik); Pochodzalla, J.; Schuettauf, A.; Tucholski, A.; Adloff, J.C.; Rudolf, G.; Stuttge, L.; Bouissou, P.; Leray, S.;

Imme, G.; Raciti, G.; Iori, I.; Moroni, A. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Mar 1992. 39p. Order Number DE93728958. Source: OSTI; NTIS (US Sales Only); INIS.

We have studied multi-fragment decays of Au projectiles after collision with C, Al, Cu and Pb targets at a bombarding energy of 600 MeV/nucleon. We examine the correlations between the charges emitted in these reactions. These correlations are given as a function of the total charge in bound fragments, Z_{bound}, at forward angles, which is a measure of the violence of the collision and can be related to the impact parameter. The charge distributions have been fit by a power law and the extracted τ parameter exhibits a minimum as a function of Z_{bound}. We observe a strong reduction in the maximum charge, Z_{max}, of the event with decreasing Z_{bound}. For those events where Z_{max} is less than half Z_{bound}, the relative sizes of the two largest charges within the event cover the full spectrum of possibilities. The charge-Dalitz plots indicate that the multi-fragmentation events are not an extension of symmetric fission reactions. The event-by-event charge moments are examined to measure the size of the charge fluctuations. All of the charge correlations are independent of the target when plotted as a function of Z_{bound}. The results are compared to both nuclear statistical and percolation calculations. The model predictions differ from each other, establishing that the observables are sensitive to how the available phase space is populated. The sequential nuclear model predicts too asymmetric a decay, while the simultaneous model predicts too symmetrical a break-up. The percolation model, which was adjusted to reproduce the mean multiplicity of fragments and the size of Z_{max}, correctly predicts the charge fluctuations. (orig.).

4615 (GSI–92-35(prepr.)) **Systematics of charm production in hadronic collisions.** Vogt, R. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)); Brodsky, S.J.; Hoyer, P. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). May 1992. 52p. Contract DE-AC03-76SF00515. (SLAC-PUB–5827). Order Number DE93728820. Source: OSTI; NTIS (US Sales Only); INIS.

We present a comprehensive QCD-based model for the x_f, p_T, and nuclear target dependence of open charm production in hadron-induced collisions. The predicted dependence of x_f and p_T reflects both leading-twist QCD fusion subprocesses, including shadowing and coalescence effects, and higher-twist intrinsic heavy-quark components of the hadron wavefunction. The model is compared with the systematics of charmed hadron production in π^-p, pp, π^-A, and pA collisions. We find that the date cannot be described by leading-twist QCD contributions alone. Several features of the data show the presence of higher-twist mechanisms of the type we consider. Differences in kinematic acceptance between various experiments may explain some of the apparent discrepancies in the available data. (orig.).

4616 (GSI–92-36(prepr.)) **Nuclear structure studies on exotic nuclei by direct reactions in inverse kinematics.** Egelhof, P. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). May 1992. 21p. (CONF-9203164–: International workshop on the physics and techniques of secondary nuclear beams, Dourdan (France), 23-25 Mar 1992). Order Number DE93728816. Source: OSTI; NTIS (US Sales Only); INIS.

The new heavy-ion facilities at GSI Darmstadt allow to investigate light ion induced direct reactions on nuclei in the region away from stability using good quality exotic beams in inverse kinematics. In the present contribution a survey on the physics program addressing a variety of questions in nuclear- and astrophysics is given and the experimental concept is discussed. Special care is given to a comparison of the conditions for cooled and stored exotic beams interacting with an integral target of the heavy-ion storage ring to those for the exotic beams interacting with an external target. Finally, the results of first experiments, as well as the status of new experimental developments, are displayed. (orig.).

4617 (GSI–92-41(prepr.)) **Total and 2n-removal cross sections of the neutron-rich isotopes ^{8,9,11}Li.** Blank, B. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)); Gaimard, J.J.; Geissel, H.; Schmidt, K.H.; Stelzer, H.; Suemmerer, K.; Bazin, D.; Moral, R. del; Dufour, J.P.; Fleury, A.; Hubert, F.; Clerc, H.G.; Steiner, M. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Jun 1992. 30p. Order Number DE93728819. Source: OSTI; NTIS (US Sales Only); INIS.

Total interaction cross sections have been measured for ^{8}Li on C and Pb targets, for ^{9}Li on C, Al, Cu, Sn and Pb targets, as well as for ^{11}Li on C, Sn and Pb targets at about 80 MeV/nucleon. In addition, 2n-removal cross sections for ^{11}Li have been extracted. These measurements are used to determine the nuclear and the electromagnatic part of the cross sections for the different projectile-target combinations. The experimental results are compared to different model calculations. These comparisons allow to draw conclusions on the matter density distribution of the neutron-rich lithium isotope ^{11}Li. By comparing our data on the electromagnetic dissociation of ^{11}Li with all the other data available in the literature, we are able to put constraints on the dipole-strength distribution in ^{11}Li. (orig.).

4618 (GSI–92-52(prepr.)) **Impact-parameter dependence of the electromagnetic particle production in ultrarelativistic heavy-ion collisions.** Vidovic, M. (Frankfurt Univ. (Germany). Inst. fuer Theoretische Physik); Greiner, M.; Best, C.; Soff, G. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Aug 1992. 50p. Order Number DE93729016. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section for the electromagentic production of different particles in heavy-ion collision is derived within the external field approach. The underlying assumption leading to the equivalent photon method is that the transverse components of the virtual photon momenta are small compared to their longitudinal components. Introducing polarized photon-fusion cross sections, it is possible to generalize the equivalent photon method to describe the impact- parameter dependence of the particle production. The impact- parameter dependent production of scalar and pseudoscalar (spin 0) bosons, charged (spin 0) boson pairs and fermion pairs is discussed in general. (orig.).

4619 (GSI–92-53(prepr.)) **Distribution of Ir and Pt isotopes produced as fragments of 1 A GeV ^{197}Au projectiles - a thermometer for peripheral nuclear collisions.** Schmidt, K.H. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)); Geissel, A.; Muenzenberg, G.; Nickel, F.; Pfuetzner, M.; Scheidenberger, C.; Suemmerer, K.; Vieira, D.; Brohm, T.; Clerc, H.G.; Dornik, M.; Fauerbach, M.; Grewe, A.; Hanelt, EGesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Aug 1992. 12p. Order Number DE93728929. Source: OSTI; NTIS (US Sales Only); INIS.

Cross sections of iridium and platinum isotopes have been measured, which were produced as fragments from ^{197}Au projectiles interacting with aluminum target nuclei at 1 A GeV. The fragments were identified by a kinematic analysis (ΔE-Bρ - time-of-flight) and by an ion-optical separation at the projectile-fragment separator FRS at GSI. Indications are found for high excitation energies and weak proton-neutron correlations in the peripheral nuclear-collision process. (orig.).

4620 (GSI–92-56(prepr.)) **Probing the hadronic structure of the photon in ultrarelativistic heavy-ion collisions.** Schneider, S.M. (Frankfurt Univ. (Germany). Inst. fuer Theoretische Physik); Greiner, W.; Soff, G. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Aug 1992. 13p. Order Number DE93729009. Source: OSTI; NTIS (US Sales Only); INIS.

Consequences of the hadronic content of photons on particle creation processes are studied for peripheral heavy-ion collisions at the maximum LHC energy of 3.5 TeV per nucleon. Modifications of the Higgs-boson and quark pair creation rate due to the quark and gluon content of the photons are calculated. In particular, we dound that Z^0 boson creation processes may represent a promising tool to investigate the influence of the internal photon structure in peripheral heavy-ion collision. (orig.).

4621 (IC–92/245) **On intermediate energy heavy Ion optical model potential.** Rihan, T.H. (Al-Fateh, Tripoli (Libya). Dept. of Physics); Awin, A.M. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 8p. Order Number DE93608480. Source: OSTI; NTIS (US Sales Only); INIS.

We derive in this paper an approximate analytical expression for the heavy ion optical potential by solving the inversion problem

based on the McIntyre parametrization of the S-matrix. The quasi-classical limit of high energy approximation is modified in our approach so as to account for the Coulomb distortion of the trajectory. (author). 5 refs, 2 figs.

4622 (INDC(CUB)–005/G) **Can be achieved a more accuracy in neutron cross section calculation at low energies?.** Cabezas, R. (Center for Applied Studies to Nuclear Development, Havana (Cuba)); Lubian, J. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Mar 1992. 24p. Order Number DE93608468. Source: OSTI; NTIS (US Sales Only); INIS.

The role of some approximations that traditionally are used in the calculation of neutron inelastic cross section for nuclei in the mass region $48 \leq A \leq 64$ is analyzed. It is shown, that the use of different optical potential parameters for ground and first excited states causes a contribution of more than 10% on the cross section. In the description of the structure of "soft" nuclei, the effect of anharmonicities is considered. This effect has a notable contribution to the cross section near the threshold at low energies. For better description of the experimental data in ^{48}Ti(n,n') process, the multichannel coupled model is used. (author). 42 refs, 20 figs, 8 tabs.

4625 (INP–1532/PH) **Nuclear and partonic dynamics in high energy elastic nucleus-nucleus scattering.** Malecki, A. Institute of Nuclear Physics, Cracow (Poland). 1991. 15p. Order Number DE93608475. Source: OSTI; NTIS (US Sales Only); INIS.

A hybrid description of diffraction which combines a geometrical modelling of multiple scattering with many-channel effects resulting from intrinsic dynamics on nuclear and sub-nuclear level is presented. The application to the ^{4}He-^{4}He elastic scattering is very satisfactory. Our analysis suggests that at large momentum transfers the parton constituents of nucleons immersed in nuclei are deconfined. (author).

4626 (INP–1533/PH) **Fluctuations and intermittency in high energy nucleus-nucleus collisions.** Wosiek, B. Institute of Nuclear Physics, Cracow (Poland). Feb 1991. 96p. Order Number DE93608481. Source: OSTI; NTIS (US Sales Only); INIS.

Fluctuations of the particle densities in semi-central collisions of ^{16}O, ^{28}Si and ^{32}S nuclei with heavy components of nuclear emulsion at different primary energies are studied. Various methods of data analysis have been used, ranging from the examination of the structure in individual events, to the study of the average factorial moments and conventional correlation functions. Emphasis is put on the analysis of the average factorial moments which appear to be the most efficient tool in searching for dynamical fluctuations. Unquestionable evidence for non-statistical fluctuations is found in ^{16}O and ^{32}S interactions with Ag/Br targets at 200 GeV/nucleon. Specifically, I observe larger deviations of individual pseudorapidity distributions from a smooth spectrum and more frequent occurrence of narrow spikes than expected from Monte Carlo simulations based on independent emission of secondary particles. Clear intermittency signals are found in pseudorapidity and azimuthal angle distributions. Intermittency effect is also observed in two dimensions, where it has turned out to be stronger and cleaner than in one-dimensional distributions. Multiplicity distributions in the restricted phase space domains are well described by the negative binomial formula and consequently I find that factorial moments can be equivalently obtained from the parameters of the negative binomial fits. On the other hand investigation of the two-particle correlation functions in pseudorapidity provides no supporting evidence for pronounced non-statistical correlations. The occurrence of large particle-density fluctuations is expected in the presence of phase transition in ultrarelativistic nuclear collisions. Even though the obtained results can not be unambigously interpreted as an indication for quark-gluon plasma formation, nevertheless they clearly show that some collective effects are present in high energy nucleus-nucleus collisions. 84 refs. (author).

4627 (INP–1539/PL) **Fusion-fission dynamics.** Blocki, J. (Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland)); Planeta, R.; Brzychczyk, J.; Grotowski, K. Institute of Nuclear Physics, Cracow (Poland). Apr 1991. 25p. Order Number DE93608482. Source: OSTI; NTIS (US Sales Only); INIS.

Classical dynamical calculations of the heavy ion induced fission process for the reactions ^{40}Ar+^{141}Pr, ^{20}Ne+^{165}Ho and ^{12}C+^{175}Lu leading to the iridium like nucleus have been performed. As a result prescission lifetimes were obtained and compared with the experimental values. The agreement between the calculated and experimental lifetimes indicates that the one-body dissipation picture is much more relevant in describing the fusion-fission dynamics than the two-body one. Somewhat bigger calculated times than the experimental ones in case of the C+Lu reaction at 16 MeV/nucleon may be a signal on the energy range applicability of the one-body dissipation model. (author).

4628 (ITF–91-36) **The dependence of the oriented nuclei electroexcitation cross-section on the electron polarization.** Tartakovskij, V.K.; Lyong Zuen Fu; Fursaev, A.V. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 9p. (In Russian). Order Number DE93608461. Source: OSTI; NTIS (US Sales Only); INIS.

The general expression for the differential cross section of the light oriented nuclei electroexcitation by ultrarelativistic polarized electrons, which includes the dependence on the primary and the final degrees of electron polarization is calculated. The physical interpretation is considered. 15 refs. (author).

4629 (ITF–91-52) **Polarization phenomena under low energy photodisintegration of few-nucleon nuclei.** Gurin, Yu.L.; Kozlovskij, I.V.; Malyarzh, E.M.; Tartakovskij, V.K. Polarization of knocked-out nucleons is studied for the deuteron photodisintegration and two-particle photodisintegration of ration of three-nucleon nuclei by polarized and unpolarized low energy photons. The influence of convection and spin currents and of final state interaction on the energy dependence of the polarization degree and polarization vector direction of the knocked-out nucleons is considered for various photon polarization. 21 refs.; 9 figs. (author).

4630 (ITP–91-28) **Proton elastic and quasi-elastic (p,p'd) knock out reactions on ^{6}Li nucleus.** Peresypkin, V.V.; Ibraeva, E.T.; Kukulin, V.I. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 16p. Order Number DE93608469. Source: OSTI; NTIS (US Sales Only); INIS.

The elastic proton scattering at energies 0.2, 0.6 and 1.0 GeV and quasi-elastic (p,p'd) knock out reaction on ^{6}Li nucleus are investigated within Glauber-Sitenko theory using the realistic wave functions of a target nucleus. The calculated elastic scattering differential cross-sections agree well with experimental data. The

^{6}Li(p,pd)^{4}He differential cross-sections in noncomplanar geometry within the framework of the plane-wave approximation agree qualitatively with experimental data. The cross-section dependence on the target nucleus wave function form is investigated. 15 refs.; 6 figs. (author).

4631 (ITP–91-42) **Coulomb effects in the proton-deuteron scattering and radiative capture processes at zero energy.** Kharchenko, V.F.; Navrotskij, M.A.; Katerinchuk, P.A. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 36p. Order Number DE93608470. Source: OSTI; NTIS (US Sales Only); INIS.

The Coulomb effects in the elastic pd scattering and M1 radiative pd capture processes at zero collision energy are studied on the basis of a direct solution of the integral equations for three nucleons with the S-wave separable NN potential. Taking due account of the Coulomb distortion of three-nucleon system at finite distances and neglecting the long-range part of the polarization pd interaction, the pd scattering lengths and the astrophysical S-factor of the pd capture reaction are calculated. The correlations between the doublet pd and nd scattering lengths as well as between the S-factor for the pd radiative M1 capture at zero energy and the cross section of the thermal nd radiative M1 capture are ascertained. 42 refs.; 3 figs.; 3 tabs. (author).

4632 (ITP–91-56) **Chemical potentials of π^- and π+ in heavy-ion collisions.** Gorenstejn, M.I.; Shin Nan Yang. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 8p. Order Number DE93608483. Source: OSTI; NTIS (US Sales Only); INIS.

We consider a chemical nonequilibrium model to describe the pion production in Ar+KCl and La+La collisions at initial energies E_{lab}/A=(0.5-1.8) GeV/nucl. The excess of low energy π^- is interpreted as the manifestation of positive chemical potential of π^- at the thermal freeze out. We find that in collisions between nuclei with large atomic numbers the chemical potential of π^+ is smaller than that of π^-. This leads to the prediction of a much less excess of low-energy π^+, than as measured in the π^- case, in heavy-ion collisions at bombarding energies in the region of 1 GeV/nucl. 17 refs.; 2 figs. (author).

4633 (ITP–91-82) **Pion multiplicity as a probe of the deconfinement transition in heavy-ion collisions.** Gorenstejn, M.I.; Shin Nan Yang; Che Ming Ko. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Teoreticheskoj Fiziki. 1991. 8p. Order Number DE93608484. Source: OSTI; NTIS (US Sales Only); INIS.

The hydrochemical model is used to calculate the pion multiplicity in relativistic heavy-ion collisions. Chemical reactions are explicitly taken into account in the expansion stage of the hadronic phase. It leads to the absence of chemical equilibrium among hadronic particles and a nonzero value of the pion chemical potential at thermal freeze out. We find a specific structure in the incident energy dependence of the pion multiplicity as a result of the formation of the quark-hadron mixed phase in the initial stage of the collision. 13 refs.; 3 figs.

4634 (JINR-R–1-91-455) **π^--meson production in the interaction of deuterons at 1 GeV per nucleon with carbon and beryllium extended targets.** Viryasov, N.M. (and others); Nagajtsev, A.P.; Solov'ev, M.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1991. 15p. (In Russian). Order Number DE93608476. Source: OSTI; NTIS (US Sales Only); INIS.

The yields, momentum and angular distributions of π^--mesons produced in the interactions of deuterons at 1 GeV per nucleon with the thick carbon and beryllium targets have been obtained. The inelastic cross section of dBe interaction has been measured for the first time. 11 refs.; 7 figs.; 5 tabs.

4635 (KFK–5063) **First observation of the inelastic neutrino-nucleus-scattering ν+^{12}C→ν'+^{12}C*.** Eberhard, V. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Kernphysik; Karlsruhe Univ. (T.H.) (Germany). Fakultaet fuer Physik. Aug 1992. 137p. (In German). Order Number DE93729015. Source: OSTI; NTIS (US Sales Only); INIS.

In the main part of this work, the first observation of the neutrino - nucleus excitation due to the weak neutral current. ^{12}C(υ,υ')^{12}C*(1$^+$, 1; 15.1 MeV) is described. The signature of this reaction is based solely on the detection of the 15 MeV Y-quantum emitted in the deexcitation of the ^{12}C(1$^+$1, 15 MeV) level. The detection of this neutrino induced single prong reaction is only possible due to the good calorimetric properties of the KARMEN detector, the efficient background supression and the detailed knowledge of the remaining background. The cross section of the ^{12}C(<$\upsilon,\upsilon\iota$)^{12}C* (1$^+$,1;15.1 MeV) neutrino nucleus excitation, averaged over the υ_e and υ_μ flux from the ISIS beam dump, is found to be <$\sigma(\upsilon_e$ + anti $\nu)$> = (11.4 ± 4.0(stat) ± 1.6 (syst))x10^{-}42 cm^2 which is in good agreement with theoretical values. (orig./HSI).

4636 (SINS–2122/P-6/PH/A) **Pion-source geometry deduced from soft-pion interferometry in heavy-ion collisions at 650 A MeV.** Bock, R. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)); Gutbrod, H.H.; Kolb, B.; Lund, I.; Schmidt, H.R.; Doss, K.G.R.; Kampert, K.H.; Siemiarczuk, T.; Wislicki, W. Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland). Oct 1991. 18p. Order Number DE93608485. Source: OSTI; NTIS (US Sales Only); INIS.

Report received in March 1992.

We report transverse, R_T, and longitudinal, R_L, source sizes extracted from two-pion interferometry analysis in the Au+Au and Nb+Nb interactions at 650 A MeV. For the Nb+Nb interactions, both, R_T and R_L, do not exceed the niobium nucleus radius. In the case of Au+Au collisions, the transverse size is larger than the longitudinal one being about 12 fm for the selection of p_π + < 120 MeV/c. We also corroborate the existence of the previously reported specific three-pion correlations. (author).

4637 (CONF-921046–5) **Status and covariance files of the scattering matrix of graphite.** Difilippo, F.C.; Renier, J.P.; Worley, B.A. Oak Ridge National Lab., TN (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on nuclear data evaluation methodology; Upton, NY (United States); 12-16 Oct 1992. Order Number DE93001632. Source: OSTI; NTIS; INIS; GPO Dep.

Calculations related to the temperature coefficient of reactivity of enriched gas-cooled reactors show the high sensitivity of this parameter to the proper description of thermalization effects in the moderator; additionally, calculation of the temperature dependence of the inelastic scattering cross section correlates the errors of the cross sections as functions of the temperature. The ENDF/B evaluation of S(α,β,T) is still based on the approximations (incoherent component only) and phonon spectras of the early 60's. Subsequent measurements showed that the structure observed in S(α,β,T) cannot be described using the incoherent approximation, and soon after the availability of highly intense neutron beams and large specimens of pyrolitic graphite better calculation of the phonon spectra were possible. Our calculations of the probability distributions of the momentum and energy transfer, α and β, allow one to define a range of α and β for which comparison of experimental and theoretical data is of most interest for reactor analysis, and to point out regions of deficient resolution or excessive details in the present α,β mesh used in the ENDF/B files. Because the phonon spectra defines S(α,β,T), we have found mathematical formulas that allow the calculation of the covariance matrix of S by propagating the errors of the phonon spectra.

4638 (DOE/ER/12899–3) **A fundamental study of "contribution" transport theory and channel theory applications: Progress report.** Williams, M.L. Louisiana State Univ., Baton Rouge, LA (United States). [1992]. 6p. Sponsored by USDOE,

Washington, DC (United States). DOE Contract FG02-89ER12899. Order Number DE93004315. Source: OSTI; NTIS; INIS; GPO Dep.

The objective of this three-year study is to develop a technique called "channel theory" that can be used in interpreting particle transport analysis such as frequently required in radiation shielding design and assessment. Channel theory is a technique used to provide insight into the mechanisms by which particles emitted from a source are transported through a complex system and register a response on some detector. It is based on the behavior of a pseudo particle called a "contributon," which is the response carrier through space and energy channels that connect the source and detector. "Contributons" are those particles among all the ones contained in the system which will eventually contribute some amount of response to the detector. The specific goals of this projects are to provide a more fundamental theoretical understanding of the method, and to develop computer programs to apply the techniques to practical problems encountered in radiation transport analysis. The overall project can be divided into three components to meet these objectives: (a) Theoretical Development, (b) Code Development, and (c) Sample Applications. During the present third year of this study, an application of contributon theory to the analysis of radiation heating in a nuclear rocket has been completed, and a paper on the assessment of radiation damage response of an LWR pressure vessel and analysis of radiation propagation through space and energy channels in air at the Hiroshima weapon burst was accepted for publication. A major effort was devoted to developing a new "Contributon Monte Carlo" method, which can improve the efficiency of Monte Carlo calculations of radiation transport by tracking only contributons. The theoretical basis for Contributon Monte Carlo has been completed, and the implementation and testing of the technique is presently being performed.

4639 (DOE/ER/25086–T1) **Fast algorithms for transport models: Technical progress report.** Manteuffel, T.A. Colorado Univ., Denver, CO (United States). 1 Dec 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER25086. Order Number DE93003881. Source: OSTI; NTIS; GPO Dep.

The objective of this project is the development of numerical solution techniques for deterministic models of the transport of neutral and charged particles and the demonstration of their effectiveness in both a production environment and on advanced architecture computers. The primary focus is on various versions of the linear Boltzman equation. These equations are fundamental in many important applications. This project is an attempt to integrate the development of numerical algorithms with the process of developing production software. A major thrust of this reject will be the implementation of these algorithms on advanced architecture machines that reside at the Advanced Computing Laboratory (ACL) at Los Alamos National Laboratories (LANL).

4640 (INIS-BR–2972) **Energy spectra of fast neutrons by nuclear emulsion method.** Quaresma, A.A. Instituto Militar de Engenharia (IME), Rio de Janeiro, RJ (Brazil). 1977 127p. (In Portuguese). Order Number DE93608500. Source: OSTI; NTIS (US Sales Only); INIS.

An experimental method which uses nuclear emulsion plates to determine the energy spectrum of fission neutrons is described. By using this technique, we have obtained the energy distribution of neutrons from spontaneous fission of Cf^{252}. The results are in good agreement with whose obtained previously by others authors who have used different detection techniques, and they are consistent with a Maxwellian distribution as expected by Weisskopf's nuclear evaporation theory. (author).

4641 (INIS-BR–2982) **Study of a method to solve the one speed, three dimensional transport equation using the finite element method and the associated Legendre function.** Fernandes, A. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1991 181p. (In Portuguese). Order Number DE93607644. Source: OSTI; NTIS (US Sales Only); INIS.

A method to solve three dimensional neutron transport equation and it is based on the original work suggested by J.K. Fletcher (42, 43). The angular dependence of the flux is approximated by associated Legendre functions and the finite element method is applied to the space components is presented. When the angular flux, the scattering cross section and the neutrons source are expanded in associated Legendre functions, the first order neutron transport equation is reduced to a coupled set of second order diffusion like equations. These equations are solved in an iterative way by the finite element method to the moments. (author).

4643 (KAERI/RR–1084/91) **A study on nuclear materials by neutron scattering.** Kim, Huhn Jun (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Kim, Yong Che; Chun, Byung Chil; Lee, Chang Hee; Lee, Jeong Soo; Seong, Beak Seok; Shim, Hae Seop; Choi, Byong Hoon; Ho, Jong Wha. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Feb 1992. 108p. (In Korean). Order Number DE93606181. Source: OSTI; NTIS (US Sales Only); INIS.

To establish quantitative relationship between texture and elastic anisotropy we measured 4 pole figures for each of the two zircaloy-4 sheet samples with thickness 1.95mm and 0.965mm by neutron diffraction and evaluated the elastic constants of the materials by averaging those of Zr single crystal weighted with crystallites orientation distribution functions(ODF). Based on the average elastic constants for polycrystals, angular dependent ultrasonic wave velocities of SH_0 and S_0 mode were estimated for comparison with measurement. Various preparatory works are under way to install mutually complementary neutron spectrometers to the 7 horizontal beam tubes of the KMRR. Under the plan to transport and install the polarized neutron spectrometer(PNS) present at TRIGA MARK-III, several modifications and upgrade works have been initiated such as estimation of the properties of polarizing monochromator and neutron beam intensity characteristics at ST-1 beam tube. The resolution and the incident intensity at the sample of the small angle neutron spectrometer (SANS) at design stage are evaluated for the limited reactor hall space using cold neutron(4-10A). (Author).

4644 (KFK–4708) **PLXY - a code for the solution of the multigroup neutron transport equation x-y geometry by a spherical harmonics method of general order.** Kobayashi, Keisuke. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Neutronenphysik und Reaktortechnik; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Nukleare Sicherheitsforschung. Jul 1991. 117p. Order Number DE93729013. Source: OSTI; NTIS (US Sales Only); INIS.

The code PLXY solves the multigroup neutron transport equation by the spherical harmonics (P_L) method for two-dimensional x-y geometry allowing a general order (L) of approximation by the spherical harmonics functions. There exists no principal limit for the order L of the spherical harmonics expansion except the practical limitations for the size of the memory and the computation time of the available computer. Within the group anisotropic scattering cross-section is taken into account with higher order approximation, but the slowing-down cross-section and the external source as well as fission neutrons are presently for simplicity reasons assumed to be isotropic in the laboratory system. The explicit form of the equantions, the discretization scheme for the mesh-edged finite difference solution scheme, a detailed explanation of the computer program and the format of the input data are given together with sample problems. (orig.).

4645 (ORNL/RSIC–55) **Early test facilities and analytic methods for radiation shielding: Proceedings.** Ingersoll, D.T.

(comp.) (Oak Ridge National Lab., TN (United States)); Ingersoll, J.K. (comp.). Oak Ridge National Lab., TN (United States). Nov 1992. 94p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. (CONF-921102–: Joint American Nuclear Society (ANS)/European Nuclear Society (ENS) international meeting on fifty years of controlled nuclear chain reaction: past, present, and future, Chicago, IL (United States), 15-20 Nov 1992). Order Number DE93003288. Source: OSTI; NTIS; INIS; GPO Dep.

This report represents a compilation of eight papers presented at the 1992 American Nuclear Society/European Nuclear Society International Meeting. The meeting is of special significance since it commemorates the fiftieth anniversary of the first controlled nuclear chain reaction. The papers contained in this report were presented in a special session organized by the Radiation Protection and Shielding Division in keeping with the historical theme of the meeting. The paper titles are good indicators of their content and are: (1) The origin of radiation shielding research: The Oak Ridge experience, (2) Shielding research at the hanford site, (3) Aircraft shielding experiments at General Dynamics Fort Worth, 1950-1962, (4) Where have the neutrons gone?, a history of the tower shielding facility, (5) History and evolution of buildup factors, (6) Early shielding research at Bettis atomic power laboratory, (7) UK reactor shielding: then and now, (8) A very personal view of the development of radiation shielding theory.

4646 (SAND–92-7296) **Improved response functions for gamma-ray skyshine analyses.** Shultis, J.K. (Kansas State Univ., Manhattan, KS (United States). Dept. of Nuclear Engineering); Faw, R.E.; Deng, X. Sandia National Labs., Albuquerque, NM (United States); Kansas State Univ., Manhattan, KS (United States). Dept. of Nuclear Engineering. Sep 1992. 113p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93003230. Source: OSTI; NTIS; GPO Dep.

A computationally simple method, based on line-beam response functions, is refined for estimating gamma skyshine dose rates. Critical to this method is the availability of an accurate approximation for the line-beam response function (LBRF). In this study the LBRF is evaluated accurately with the point-kernel technique using recent photon interaction data. Various approximations to the LBRF are considered, and a three parameter formula is selected as the most practical approximation. By fitting the approximating formula to point-kernel results, a set of parameters is obtained that allows the LBRF to be quickly and accurately evaluated for energies between 0.01 and 15 MeV, for source-to-detector distances from 1 to 3000 m, and for beam angles from 0 to 180 degrees. This reevaluation of the approximate LBRF gives better accuracy, especially at low energies, over a greater source-to-detector range than do previous LBRF approximations. A conical beam response function is also introduced for application to skyshine sources that are azimuthally symmetric about a vertical axis. The new response functions are then applied to three simple skyshine geometries (an open silo geometry, an infinite wall, and a rectangular four-wall building) and the results compared to previous calculations and benchmark data.

6640 Atomic and Molecular Physics

4647 (GSI–92-60(prepr.)) **Latest hot topics in atomic physics research in GSI.** Kienle, P. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Sep 1992. 28p. (CONF-9206275–: Nobel symposium on heavy ion spectroscopy and QED effects in atomic systems, Saltsjoebaden (Sweden), 29 Jun - 3 jul 1992). Order Number DE93729011. Source: OSTI; NTIS (US Sales Only); INIS.

A report on the recent atomic physics program at GSI is given. The synchrotron storage cooler ring combination SIS/ESR allows to produce, store and cool highly charged heavyion beams up to U^{92+}. With the availability of such highly charged ion beams unique experiments have become possible, such as the observation of bound β decay of $^{163}Ho^{66+}$, the precision measurement of radiative electron capture and X-ray spectra in H-like and He-like heavy ions, and the investigation of dielectronic recombination for heavy systems. Beside this newly started program at SIS/ESR there has been some progress in the investigation of the correlated $e^+ e^-$ lines observed in heavy ion collisions near the Coulomb barrier although a convincing explanation for this phenomenon is still lacking. (orig.).

We report Hartree-Fock and configuration-interaction calculations of both the length and velocity forms of the oscillator strengths for the resonance excitation $1s^22s^22p^63s^2S^e_1 \rightarrow 1s^22s^22p^53s^2\ ^2P^0_1$, transition, which leads to autoionization (Auger transition), in several ions of the sodium isoelectronic sequence both in LS and intermediate coupling schemes employing the collapse of wave functions of 3p and 3d electrons. This approach is computationally economical and capable of yielding encouraging results. (author). 5 refs, 1 fig., 5 tabs.

4649 (IC–92/236) **Two-photon emission spectrum of a two-level atom in a cavity.** He Linsheng (International Centre for Theoretical Physics, Trieste (Italy)); Fen Xunli. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 16p. Order Number DE93608513. Source: OSTI; NTIS (US Sales Only); INIS.

We have studied the two-photon emission spectrum (TPES) of a two-level atom interaction with a single mode of radiation field in an ideal cavity. By means of the two-photon Jaynes-Cummings model and Heisenberg equation, we have obtained the expressions of system operators and TPES. We find that the structures of TPES depend on the photon statistics distribution of initial field and the pass-band width of detector Γ. When $\Gamma < \lambda$ (coupling constant), TPES exhibits the multi-peaked structure. (author). 18 refs, 12 figs, 2 tabs.

4650 (IC–92/242) **Electronic Landau levels in quantum wells with periodically structured interfaces.** Sun Hong. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 23p. Order Number DE93608514. Source: OSTI; NTIS (US Sales Only); INIS.

The energy dispersions of the electronic Landau levels in GaAs/$Al_xGa_{1-x}As$ lateral surface superlattices (LSSLs) with periodically structured interfaces in a normally applied static magnetic field are calculated numerically. The results show that the energy dispersions of the adjacent Landau levels are out of phases, which greatly reduces the energy gaps between the adjacent energy bands. For certain interface structures, the energy gaps will disappear giving a continuous distribution of the electronic states in the energy space. The effects of the periodically structured interfaces become negligible when the periods of the structured interfaces are much less than the extension, modul Δx modul $= 2\sqrt{}$ hc/eB, of the electronic wave functions in magnetic fields. The results also show that the approximation assuming an infinitely high potential barrier between the well GaAs and barrier $Al_xGa_{1-x}As$ is not very accurate in calculating the electronic Landau levels in LSSLs with periodically structured interfaces. The changes of the energy dispersions of the electronic Landau levels with the magnetic fields and structural parameters of LSSLs are studied in detail. (author). 22 refs, 5 figs.

4651 (IC–92/249) **Ground-state energy for 1D (t,U,X)-model at low densities.** Buzatu, F.D. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 9p. Order Number DE93608515. Source: OSTI; NTIS (US Sales Only); INIS.

In describing the properties of quasi-1D materials with a highly-screened interelectronic potential, an attractive hopping term has to be added to the Hubbard Hamiltonian. The effective interaction and the ground-state energy in ladder approximation are analyzed. At low electronic densities, the attractive part of the interaction, initially smaller than the repulsive term, can become more effective, the ground-state energy decreasing below the unperturbed value. (author). 12 refs, 4 figs.

4652 (RAL–92-034) **Electron correlation in molecules: concurrent computation Many-Body Perturbation Theory (ccMBPT) calculations using macrotasking on the NEC SX-3/44 computer.** Moncrieff, D. (Florida State Univ., Tallahassee, FL (United States). Supercomputer Computations Research Inst.); Saunders, V.R.; Wilson, S. Rutherford Appleton Lab., Chilton (United Kingdom). Jun 1992. 25p. Order Number DE93608516. Source: OSTI; NTIS (US Sales Only); INIS.

The ab initio determination of the electronic structure of molecules is a many-fermion problem involving the approximate description of the motion of the electrons in the field of fixed nuclei. It is an area of research which demands considerable computational resources but having enormous potential in fields as diverse as interstellar chemistry and drug design, catalysis and solid state chemistry, molecular biology and environmental chemistry. Electronic structure calculations almost invariably divide into two main stages: the approximate solution of an independent electron model, in which each electron moves in the average field created by the other electrons in the system, and then, the more computationally demanding determination of a series of corrections to this model, the electron correlation effects. The many-body perturbation theory expansion affords a systematic description of correlation effects, which leads directly to algorithms which are suitable for concurrent computation. We term this concurrent computation Many-Body Perturbation Theory (ccMBPT). The use of a dynamic load balancing technique on the NEC SX-3/44 computer in electron correlation calculations is investigated for the calculation of the most demanding energy component in the most accurate of contemporary ab initio studies. An application to the ground state of the nitrogen molecule is described. We also briefly discuss the extent to which the calculation of the dominant corrections to such studies can be rendered computationally tractable by exploiting both the vector processing and parallel processor capabilities of the NEC SX-3/44 computer. (author).

6642 Spectra of Atoms and Molecules and Their Interactions With Photons

A new technique to overcome the core-hole lifetime broadening in x-ray absorption spectroscopy is presented. It utilizes a high resolution fluorescence spectrometer which can be used to analyze the fluorescence photon energy with better resolution than the natural lifetime width. Furthermore, the high resolution spectrometer can also be used to select the final state in the fluorescence process which can offer spin selectivity even without long range magnetic order in the sample.

4654 (IC–92/235) **The Optical Stark effect of the exciton due to dynamical coupling between quantized states of the electron and hole in quantum wells.** Nguyen Hong Quang. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 10p. Order Number DE93608520. Source: OSTI; NTIS (US Sales Only); INIS.

Optical Stark effect of the exciton in quantum wells is treated by taking into account not only dynamical coupling by pump field between quantized states of the electron in the conduction band but also the coupling between quantized states of the hole in the valence band. The changes in the calculated one-photon absorption probability by exciton depend essentially on pump field detuning. (author). 19 refs, 3 figs.

A possibility is studied of transformation of stored energy in inverse media with excited metastable molecules or atoms into energy of waveguide modes localized in a dielectric waveguide with small losses. A condition for generation is shown to fulfill for specific type of the localized modes of the closed waveguide. A grating of waveguides is investigated for a medium with homogeneous pumping. A flow of a stream of metastable species through a grating of independent waveguides is studied. The dependence is obtained of efficiency of energy transformation and dimensions of the region of generation on the spatial density of the waveguide surface. Numerical calculations are presented for $O_2(a\ ^1\Delta)$ and $I(^2P_{1/2})$. Practical applications of a cavitiless waveguide laser are discussed. (author). 9 refs, 4 figs, 5 tabs.

International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 19p. Order Number DE93608522. Source: OSTI; NTIS (US Sales Only); INIS.

We consider nonlinear dynamics of a system of interacting photons and excitons driven by a resonantly exciting light field. Using the linear stability analysis for nonlinear coupled equations of photon and exciton operators we investigated that, besides the usual unstable domain which is negative slope branch, there are other unstable ones in the leftmost and rightmost sides of the lower and upper branches of the frequency-density bistable curves. Numerical study shows that the system has very rich information on the instability nature and a self-oscillation process leading to chaos can occur in these unstable domains. (author). 11 refs, 9 figs.

4657 (INIS-BR–3020) **Differential perturbed angular correlation: use of physico-chemical study of some hafnium complexes derivates of hydroxy acids and EDTA.** Silveira, J.G. da. Minas Gerais Univ., Belo Horizonte, MG (Brazil). Inst. de Ciencias Exatas. 1981 132p. (In Portuguese). Order Number DE93608523. Source: OSTI; NTIS (US Sales Only); INIS.

Measures of quadrupolar interaction to nucleus level of the metal, in some hafnium complexes are presented, including the analysis by combustion, microanalysis, infrared spectroscopy and thermogravimetry. The hyperfine interaction parameters, the temperature effects and the thermal neutrons capture effects over the irradiated Hf Y (Y = EDTA) are also studied. (author).

4658 (INIS-BR–3051) **Photoemission in the Anderson model for rare earth compounds with floating valences.** Frota, H.O. da. Sao Paulo Univ., Sao Carlos, SP (Brazil). Inst. de Fisica e Quimica. 1985 161p. (In Portuguese). Order Number DE93608524. Source: OSTI; NTIS (US Sales Only); INIS.

X-ray photoemission spectra (XPS) are calculated for the spin-degenerate Anderson model of valence fluctuation compounds. Based on the renormalization group technique originally introduced by Wilson to calculate the magnetic susceptibility for the Kondo model, the numerical calculation has uniform accuracy over the entire parameter space of the Anderson model; at any given photoelectron energy, a maximum error of 4% is estimated for the calculated photoemission current. The calculated spectra display two peaks associated with the two possible x-ray induced transitions between the $n_f = 0,1$ or 2 occupations of the f-orbital: a first ionization peak corresponding to the $n_f = 2 \rightarrow n_f = 1$ transition and a second ionization peak due to the $n_f\ 1 \rightarrow n_f = 0$ transition. (author).

4659 (UCRL-JC–111468) **Spectroscopy of highly charged multi-electron ions.** Beiersdorfer, P. Lawrence Livermore National Lab., CA (United States). 16 Sep 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-920948–3: 6. international conference on physics of highly charged ions, Manhattan, KS (United States), 28 Sep - 2 oct 1992). Order Number DE93001617. Source: OSTI; NTIS; INIS; GPO Dep.

Systematic studies of highs charged neonlike and nickellike ions as well as several open-shell ions performed on an electron beam

ion trap are described and used to assess the accuracy of structure calculations of multi-electron ions. Discrepancies are found that can be attributed to inaccuracies in accounting for electron correlations and in estimating quantum electrodynamical effects. Documenting the effects of level crossings, we demonstrate that these discrepancies are compounded by uncertainties in assigning the respective contributions from quantum electrodynamics to each of the two strongly interacting levels undergoing the crossing.

The interaction (modelled by a LEPS potential) of a D_2 molecule with an icosahedral Ni_{13} cluster is mapped and analyzed in the form of equipotential contour plots. The topological features of the map correlate with the energetic and dynamical characteristics of the dissociative adsorption of the molecule on the cluster, which were extracted from quasiclassical trajectory simulations. A modification of the LEPS potential used originally is introduced. It brings the calculated reactivity of the cluster into agreement with the experimental data.

4661 (CONF-920948–5) **Low-energy measurements of electron capture by multicharged ions from excited hydrogen atoms.** Havener, C.C. (Oak Ridge National Lab., TN (United States)); Haque, M.A.; Smith, A.C.H.; Urbain, X.; Zeijlmans van Emmichoven, P.A. Oak Ridge National Lab., TN (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;AC05-76OR00033. From 6. international conference on physics of highly charged ions; Manhattan, KS (United States); 28 Sep - 2 oct 1992. Order Number DE93001642. Source: OSTI; NTIS; INIS; GPO Dep.

For very low collision energies electron capture from excited hydrogen by multicharged ions is characterized by enormous cross sections, the predicted maximum being comparable to the geometric size of the Rydberg atom. The ion-atom merged-beams technique is being used to study these collisions for the variety of charge states and the wide range of energies (0.1 to 1000 eV/amu) accessible to the apparatus. A neutral D beam containing a Rydberg atom population proportional to $1/n^3$ is produced by collisional electron detachment of 8 key D^- in N_2 gas. An applied electric field results in a truncation of the maximum principal quantum number present in the beam in the range (n=24-11) depending on the strength of the field applied. This beam is then merged with O^{3+} or O^{5+} ion beams at low relative collision velocities where the resultant beam-beam signal of D^+ due to electron loss is dominated by electron capture. From the sharp decrease in the observed beam-beam signal as the electric field increases it is inferred that the electron capture cross section scales as n^4 increasing towards n^5 for collision energies below 1 eV/amu.

4662 (CONF-921116–4) **Angular distributions of charge exchange collisions at very low energies.** Keller, N. (Tennessee Univ., Knoxville, TN (United States). Dept. of Physics); Miller, R.D.; Westerlind, M.; Andersson, L.R.; Elston, S.B.; Sellin, I.A.; Biedermann, C. Oak Ridge National Lab., TN (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States); Swedish National Science Research Council (Sweden). DOE Contract AC05-84OR21400. From 12. international conference on the application of accelerators in research and industry; Denton, TX (United States); 2-5 Nov 1992. Order Number DE93002338. Source: OSTI; NTIS; INIS; GPO Dep.

We have measured angular distributions of double-electron capture in $C^{4+} \rightarrow$ He collisions at energies between 400 and 800 eV. The experimental energy-gain spectra show that the ground state of C^{2+} ($1s^2\ 2s^2$) is populated. In the angular distributions we observe an interference pattern which is attributed to Stueckelberg oscillations. We find additional structures in the spectra that are no related to the Stueckelberg interferences. The presented results are compared to experimental data as well as theoretical calculations by other authors.

4663 (DOE/ER/53188–9) **Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles: Annual progress report, 15 September 1991–14 September 1992.** Gay, T.J.; Park, J.T. Missouri Univ., Rolla, MO (United States). Div. of Applied Plasma Physics. [1992]. 106p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-84ER53188. Order Number DE93002654. Source: OSTI; NTIS; INIS; GPO Dep.

We report progress made during the period 15 September 1991–14 September 1992 on the project "Experimental Investigations of Electron Capture from Atomic Hydrogen and Deuterium by Alpha Particles". In the past year we have developed reliable, narrow energy spread, high-current sources of He^{++} based on direct-current magentron and electron-cyclotron resonance discharges. These sources have been proven on our test bench accelerator which has been upgraded to also allow us to test atomic hydrogen effusive targets. We have thus made substantial progress toward our goal of studying single electron capture from atomic hydrogen by doubly-ionized helium. A research plan for the upcoming year is also presented.

4664 (DOE/ER/54104–1) **Relativistic calculations of excitation and ionization of highly charged ions by electron impact: Final technical report.** Sampson, D.H. Pennsylvania State Univ., University Park, PA (United States). 15 Apr 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER54104. Order Number DE93002129. Source: OSTI; NTIS; INIS; GPO Dep.

Our rapid relativistic atomic structure program and relativistic distorted-wave programs for excitation and ionization of highly charged ions were further improved. The generalized Briet interaction and other QED corrections were added to the atomic structure program, and the speed of the distorted-wave excitation program was increased by over an order of magnitude over what it was when our initial large-scale relativistic calculations of excitation of Ne-like ions were made. The improved programs were then used to calculate collision strengths for 330 transitions in F-like ions with $22 \leq Z \leq 92$ and 248 transitions in Ni-like ions with $60 \leq Z \leq 92$. We expanded the relativistic collision program to include an option to use atomic structure data by the well-known multi-configuration Dirac-Fock (MCDF) program of Grant and A coworkers. This was used in calculating collision strengths for the 45 $\Delta n = 0$ transitions with n=2 in Be-like ions with $8 \leq Z \leq 92$. This relativistic collision strength program was also extended to include an option to include the generalized Breis interaction in the scattering matrix elements and the importance of this for He-like, He-like and Li-like ions with Z = 26, 54 and 92 was studied. The factorization method was applied to ionization. Regardless of the complexity of the ion the ionization cross sections could be written as a sum of the products of a readily calculated coefficient that depends only on ion properties and a hydrogen-like cross section. Work was also done on excitation and ionization by directive and, in some cases spin-polarized electrons, which is of interest for some EBIT experiments and the study of solar flares.

4665 (GSI–92-49(prepr.)) **Investigations of correlated e^+e^- emission in heavy-ion collisions near the Coulomb barrier.** Koenig, I.; Berdermann, E.; Bosch, F.; Kienle, P.; Koenig, W.; Kozhuharov, C.; Schroeter, A.; Tsertos, H. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). Aug 1992. 53p. Order Number DE93728899. Source: OSTI; NTIS (US Sales Only); INIS.

We present the results obtained from a series of e^+e^--coincidence measurements in heavy-ion collisions using the double-Orange β-spectrometer at GSI. The collision systems U+U, U+Pb, and U+Ta were investigated at bombarding energies close to and slightly above (U+Ta) the Coulomb barrier. For all systems studied, very narrow (FWHM$\simeq$20 keV) e^+e^- lines were observed in the sum-energy spectra, with kinetic energies ranging from $\simeq$

555 keV to $\simeq$ 810 keV, superimposed on a continuous distribution mainly due to uncorrelated e^+e^- emission. Particularly in the U+Ta system, a pronounced sum-energy line appears at $\simeq$ 634 keV, predominantly in deep-inelastic collisions. In some cases (e.g. U+Pb) the line characteristics is consistent with a two-body decay mode of an emitter which moves with the c.m. velocity of the colliding ions. However, other lines, and in particular the 634 keV line (U+Ta), exhibit a rather isotropical opening-angle distribution whereas their energy is unequally shared between positrons and electrons, thus being in clear disagreement with this scenario. In general, the data preclude an emission from the separated (moving) nuclei, and, in the latter cases, provide evidence that the e^+e^--pair decay occurs in the vicinity of the Coulomb field of a third heavy partner having only a small transverse velocity (vertical stroke$v_{perpendicular\ to}$vertical stroke$<0.02c$). (orig.).

4666 (IC–92/206) **AGFA differential cross sections for the excitation $1s^2S^e \rightarrow 2s^2Se$ transitions in H by electron impact at 1 Rydberg.** Tiwary, S.N. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 11p. Order Number DE93608535. Source: OSTI; NTIS (US Sales Only); INIS.

We have calculated the differential cross sections for the excitation $1s^2S^e \rightarrow 2s^2Se$ transition in the hydrogen atomic system by electron impact using the basis functions (1s-2s-2p) within the Asymptotic Green Function Approximation (AGFA) at an incident energy 1 Rydberg. Our present results qualitatively agree with out earlier R-matrix prediction. (author). 33 refs, 1 fig.

4667 (IC–92/207) **H^+ impact ionization of Ar.** Tiwary, S.N. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 10p. Order Number DE93608536. Source: OSTI; NTIS (US Sales Only); INIS.

We present calculations of the ionization cross sections of the collisional reaction $H^+ + Ar(1s^22s^22p^63s^23p^6\ ^1Se) \rightarrow H^+ + e^- + Ar^+(1s^22s^22p^63s^13p^6\ ^2Se)$ using configuration-interaction wave function within the binary encounter approximation. Comparison is made with available results. (author). 45 refs, 1 fig.

4668 (LBL–32440) **Collision dynamics of methyl radicals and highly vibrationally excited molecules using crossed molecular beams.** Chu, P.M.Y. Lawrence Berkeley Lab., CA (United States). Oct 1991. 130p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE92041194. Source: OSTI; NTIS; INIS; GPO Dep.

The vibrational to translational (V→T) energy transfer in collisions between large highly vibrationally excited polyatomics and rare gases was investigated by time-of-flight techniques. Two different methods, UV excitation followed by internal conversion and infrared multiphoton excitation (IRMPE), were used to form vibrationally excited molecular beams of hexafluorobenzene and sulfur hexafluoride, respectively. The product translational energy was found to be independent of the vibrational excitation. These results indicate that the probability distribution function for V→T energy transfer is peaked at zero. The collisional relaxation of large polyatomic molecules with rare gases most likely occurs through a rotationally mediated process. Photodissociation of nitrobenzene in a molecular beam was studied at 266 nm. Two primary dissociation channels were identified including simple bond rupture to produce nitrogen dioxide and phenyl radical and isomerization to form nitric oxide and phenoxy radical. The time-of-flight spectra indicate that simple bond rupture and isomerization occurs via two different mechanisms. Secondary dissociation of the phenoxy radicals to carbon monoxide and cyclopentadienyl radicals was observed as well as secondary photodissociation of phenyl radical to give H atom and benzyne. A supersonic methyl radical beam source is developed. The beam source configuration and conditions were optimized for CH_3 production from the thermal decomposition of azomethane. Elastic scattering of methyl radical and neon was used to differentiate between the methyl radicals and the residual azomethane in the molecular beam.

4669 (DOE/ER/13456–44) **Correlation in photodetachment.** Pegg, D.J. (Tennessee Univ., Knoxville, TN (United States). Dept. of Physics). Tennessee Univ., Knoxville, TN (United States). Dept. of Physics. [1992]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-85ER13456 ;AC05-84OR21400. Order Number DE93001843. Source: OSTI; NTIS; INIS; GPO Dep.

Electron correlation plays a major role in all aspects of the photodetachment of an electron from a negative ion. Photodetachment measurements are well suited to investigate the relatively short range forces associated with correlation due to the absence of the long range Coulomb interaction. Measurements of electron affinities, asymmetry parameters and cross sections are described to illustrate the influence of correlation on photodetachment.

4670 (DOE/ER/14145–T2) **Physics of correlated systems: Progress report, December 1, 1991–November 30, 1992.** Greene, C.H. Colorado Univ., Boulder, CO (United States). [1992]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER14145. Order Number DE93002842. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: spectra of heavy open- shell atoms; multiphoton ionization processes in real atoms; angular distribution of photoelectrons ejected from aligned two-electron atoms; and few-electron correlations.

4671 (LUTFD2-TFAF–1020-1-66-1992) **The hyperfine structure - a message from the inner circle.** Sturesson, L. Lund Univ. (Sweden). Dept. of Physics. Jun 1992. 149p. (LRAP–129.). Order Number DE93608541. Source: OSTI; NTIS; INIS.

Experiment have been performed to determine the lifetimes and the hyperfine structures of excited states in atoms. Decay curves were recorded with the aid of time-resolved laser spectroscopy. From these curves, it was possible to evaluated the lifetimes with high accuracy. In certain cases, the hyperfine structures were also determined with high accuracy form quantum beat signals. The elements studied were lithium, sodium, copper, iron and silver. In favourable cases, the method of delayed coincidence gave uncertainties in lifetime measurements of about 0.5%. The detection of quantum beat signals with frequencies higher than 1 GHz was demonstrated. The effects of non-white excitation and delayed detection on level-crossing signals were also investigated. The method of delayed detection causes a narrowing of the detected signal, though most of the intensity of the signals is lost and it exhibits an oscillatory behaviour due to the gating procedure. The effect of high-intensity beams in combination with optically dense media applied to saturation absorption spectroscopy has been investigated both theoretically and experimentally. In this regime the signals exhibited sharp profiles, with widths narrower than the natural linewidth, duel to the non-linearity of the medium. Also, a strong rejection of the background was achieved. These features make this regime interesting for frequency stabilization purpose. Using wavefunctions calculated with the multi-configuration Hartree-Fock method, the hyperfine structure interaction constants of the 3s ^2S and the 3p ^2P states in ^{23}Na and the 3s3p $^{1,3}P$ and the 3s3d $^{1,3}D$ states in 25 Mg, the only stable isotope of magnesium with a hyperfine structure, were determined. We present simple estimates of the binding energies of clusters of rare-gas atoms and excitation energies of low-lying states in trimers, which are obtained by writing formally the Schroedinger equation in d dimensions and expanding its solution in powers of 1/d. Comparison with Monte Carlo calculations for Lennard-Jones clusters (Ne_n, Ar_n, Kr_n, Xe_n, n=3-7 and 13) shows good agreement, and suggests that our formulae may be used to estimate the

energy of rare-gas atoms interacting through realistic potentials. (author). 24 refs, 1 fig., 2 tabs.

This project has two goals, to calculate the lift force on a spherical droplet or particle that translates through a shear flow, and to measure the inertial migration velocity that is caused by the lift force. The focus of the study is on a range of Reynolds numbers that has been shown to be of importance in the inertial deposition of aerosols from turbulent shear flows. Aspects of current technical progress summarized are the asymptotic analysis, computer simulations, and experimental measurements. Future plans and resulting publications are given.

4675 (LBL–32714) **D^- centers in high magnetic fields and quantum wells.** Zhu, J. (Lawrence Berkeley Lab., CA (United States)); Louie, S.G.; Pang, T. Lawrence Berkeley Lab., CA (United States). Aug 1992. 8p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00098. Grant DMR-9120269. (CONF-9208163–1: 5. international conference on shallow impurities in semiconductors, Kobe (Japan), 5-8 Aug 1992). Order Number DE93000567. Source: OSTI; NTIS; GPO Dep.

The ground-state and optical properties of negative donor (D^-) centers in strong magnetic fields and quantum wells are studied using the effective mass theory. The exact ground-state binding energy is calculated to within statistical noise by a diffusion quantum Monte Carlo inethod. Excited state and optical transition energies are computed by carrying out variational Monte Carlo calculations. Comparison with available magneto-optical data of D^- centers in bulk GaAs and in $GaAs/Al_xGa_{1-x}As$ quantum wells shows good agreement between theory and experiment over a range of magnetic field strengths.

To be published in The Microbeam Analysis Journal.

Synchrotron Radiation induced X-ray micro Fluorescence analysis (μ-SRXRF) is compared with more conventional microanalytical techniques such as Secondary Ion Microscopy (SIMS) and Electron Probe X-ray Microanalysis (EPXMA) for two typical microanalytical applications. SRXRF and EPXMA are employed for the analysis of individual particles, showing the complementary character of both techniques. By means of element mapping of trace constituents in a heterogeneous feldspar, the strong and weak points of SRXRF in comparison to EPXMA and SIMS are illustrated. The most striking difference between SRXRF and the other two microanalytical methods is the ability of SRXRF to probe deep into the investigated Material, whereas SIMS and EPXMA only investigate the upper surface of the material. The possibilities of SRXRF at third generation synchrotron rings is also briefly discussed.

4677 (CONF-921201–4) **Spin density waves in dilute CuMn alloys.** Cable, J.W. (Oak Ridge National Lab., TN (United States)); Tsunoda, Y. Oak Ridge National Lab., TN (United States). [1992]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Conference on magnetism and magnetic materials; Houston, TX (United States); 1-4 Dec 1992. Neutron scattering studies on concentrated CuMn alloys show static spin density waves (SDW) that are incommensurate with the lattice and which become dynamic above the freezing temperature T_f with a dispersion relation that is essentially vertical. We have examined the existence of both the static and the dynamic SDW in dilute CuMn alloys where the Mn atoms may be separated beyond the range of SDW stability. There is no such cutoff range in the Overhauser SDW model where the transition temperature is simply linear with concentration, but a recent calculation by Ioffe and Feigel'man gives magnetic order that does depend on an interaction range and the density of spins on the lattice. For CuMn alloys, they obtain spin-glass ordering at low Mn concentration with a crossover to short-range helical order near 10% Mn. Our neutron scattering measurements were made on single crystals of CuMn alloys containing 1.4 and 3.0% Mn. Elastic scans along $<1\zeta 0>$ at temperatures well below T_f yield the same type of intensity distribution as that previously observed for the more concentrated alloys and show the existence of static SDW at dilutions down to 1.4% Mn. Inelastic scans in the same Q region for the Cu-3% Mn alloy clearly show the presence of dynamic SDW at temperatures up to $T/T_f = 7.5$. These results favor the SDW model of Overhauser as the best description of the magnetic order in dilute CuMn alloys.

Source: OSTI; NTIS; INIS; GPO Dep.

The study of the magnetic excitations in Mn-rich alloys should be a good test of the multiband calculations of the spin dynamics of pure γ-Mn, which is a prototypical itinerantelectron antiferromagnet. In this paper we report the results of recent neutron inelastic scattering measurements performed on $Mn_{90}Cu_{10}$ at room temperature ($T = 0.63\ T_N$) and up to 300 meV of energy transfer. These measurements were performed using the HET chopper-spectrometer at the ISIS spallation neutron source, Rutherford Appleton Laboratory, U.K. The results have been compared with calculations using a model scattering function convoluted with the full HET resolution function. In this model there is a steep linear spin-wave dispersion ($D \approx 250$ meV-Å) for wavevectors up to $\approx \frac{1}{2}$ of the Brillouin zone and a strong damping which is linear in the wavevector q. For larger wavevectors the spin-wave energies are constant at about

190 meV. These features are qualitatively similar to the predictions of Cade and Yeung for pure γ-Mn.

4679 (CONF-921201–6) **A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet $CsCo_{0.83}Mg_{0.17}Br_3$.** Rogge, R.B. (McMaster Univ., Hamilton, ON (Canada). Dept. of Physics and Astronomy); Gaulin, B.D.; Yang, Y.S.; Tun, Z.; Fernandez-Baca, J.A.; Nicklow, R.M. Oak Ridge National Lab., TN (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Conference on magnetism and magnetic materials; Houston, TX (United States); 1-4 Dec 1992. Order Number DE93001718. Source: OSTI; NTIS; INIS; GPO Dep.

Neutron scattering measurements have been performed on a single crystal sample of $CsCo_{0.83}Mg_{0.17}Br_3$, a quasi-one-dimensional, Ising-like antiferromagnet. Residual three-dimensional interactions between the dilute magnetic chains precipitate a phase transition to long range order at $T_N \sim 8.5$ K, and short range correlations persist as high as 40 K. Relatively high energy inelastic scattering from both "bulk" spin wave modes and "end" modes is observed from the finite chains. The low energy inelastic spectrum is dominated by soliton scattering due to anti-phase domain walls propagating along the finite chains.

4680 (INIS-BR–3037) **Moessbauer spectrometry study and metallography of paramagnetic phases from zirconium-iron system.** Freitas Brandao Bittencourt, C. de. Instituto Militar de Engenharia (IME), Rio de Janeiro, RJ (Brazil). 1976 57p. (In Portuguese). Order Number DE93608607. Source: OSTI; NTIS (US Sales Only); INIS.

Binary alloys of zirconium with 3 to 23% of iron by weight, were made by diffusion at 875^0 C of iron onto thin plates of zirconium. Moessbauer spectroscopy and optic metallography indicated the phases Zr_2 Fe and Zr_4 Fe, the bulk of which probably formed during the diffusion. These phases were confirmed by electron probe microanalysis. Moessbauer spectra showed quadrupole doublets with the same hyperfine interaction parameters in both phases, but with clearly distinct asymmetries. (author).

4682 (IC–92/175) **Excitonic bistabilities, instabilities and chaos in laser-pumped semiconductor.** Nguyen Ba An (Institute of Theoretical Physics, Hanoi (Viet Nam)); Nguyen Trung Dan; Hoang Xuan Nguyen. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 15p. Order Number DE93608677. Source: OSTI; NTIS (US Sales Only); INIS.

The Hurwitz criteria are used for a stability analysis of the steady state excitonic optical bistability curves in a semiconductor pumped by an external laser resonant with the exciton level. Besides the middle branch of the bistability curves which is unstable in the sense of the linear stability theory, we have found other domains of instability in the upper and lower branches of the steady state curves. Numerical results show that a possible route to chaos in the photon-exciton system is period-doubling self-oscillation process. The influence of the presence of free carriers that coexist with the excitons is also discussed. (author). 16 refs, 6 figs.

4683 (LA-UR–92-2913) **Equilibrium charge state distributions of 1–30 keV atomic projectiles transiting thin carbon foils.** Funsten, H.O.; Barraclough, B.L.; McComas, D.J. Los Alamos National Lab., NM (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9209200–5: 8. international conference on ion beam modification of materials, Heidelberg (Germany), 7-11 Sep 1992). Order Number DE93000792. Source: OSTI; NTIS; INIS; GPO Dep.

We have investigated the exit charge state distributions of 1–30 keV H, He, C, N, O, Ne, and Ar ions that transit thin carbon foils. In this velocity regime which is less than the Bohr velocity, the dominant charge states are neutrals and singly positive ions. Therefore, the charge state distributions are dependent primarily on electron loss by neutrals with an associated electron loss cross section al and electron capture by singly ionized species with an associated electron capture cross section σ_c. Using empirical charge state distributions, the ratio σ_1/σ_c is shown to have a quadratic dependence on the projectile velocity and is fit to the equation $A(E_F\text{-}E_T)/m$ where E_F is the exit projectile energy, m is its mass, and A and E_T are constants. A pronounced shell effect is observed: the constant A is dependent on the principle quantum number of the projectile, and E_T depends on the number of projectile valence electrons.

4684 (IC–92/250) **On the magnetoresistance of heavy fermion compounds.** Lee Chengchung (International Centre for Theoretical Physics, Trieste (Italy)); Chen Chung. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 24p. Order Number DE93608691. Source: OSTI; NTIS (US Sales Only); INIS.

Starting from two-conduction-band Anderson lattice model, the magneto-transport properties of heavy fermion systems are studied in the slave boson mean field theory. The residual magnetoresistivity induced by different kinds of impurities is calculated, and the experimentally detected positive maximum structure in the residual magnetoresistance of heavy fermion systems is reproduced. The transition of field-dependent resistivity from nonmonotonic to monotonic behaviour with increasing temperature can be explained naturally by including the charge fluctuation effect. The influence of applied pressure is also investigated. (author). 22 refs, 5 figs.

4685 (IC–92/251) **Nonlinear response function for two-phonon polaritons.** Stoychev, K.T. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 15p. Order Number DE93608692. Source: OSTI; NTIS (US Sales Only); INIS.

A nonlinear response function describing three-polariton processes (two single-phonon polaritons and two-phonon polariton) is derived for a system of interaction phonons and photons. The main features of the nonlinear optical spectra in the two-phonon polariton region are analyzed. (author). 17 refs.

4686 (IC–92/252) **Exciton solitary waves in molecular crystals.** Primatarowa, M.T. (Bulgarian Academy of Sciences, Sofia (Bulgaria). Inst. of Solid State Physics); Stoychev, K.T. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 27p. Order Number DE93608693. Source: OSTI; NTIS (US Sales Only); INIS.

Solitary waves formed of nonlinear intramolecular excitations (electronic or vibrational excitons) are investigated. Bell- and kink-type solutions are obtained and the conditions for their existence are determined. Effects of the exciton dispersion on the properties of the solitons in gyrotropic as well as nongyrotropic crystals are analyzed. The dispersion is shown to produce changes of the type of the solution inside the Brillouin zone, accompanied by a critical behaviour of some soliton parameters. (author). 27 refs, 5 figs.

Many studies have been carried out on high temperature superconductors with transition temperature above that of the liquid nitrogen. In this scientific study the concept and the mechanism of this phenomena are discussed, in addition the examples of preparation and testing of high temperature superconductors compounds are shown. Also the most important applications in industry are explained. (author). 15 refs., 2 tabs., 18 figs.

4688 (ANL/MSD/CP–77834) **Generic properties of layered superconductors.** Klemm, R.A. Argonne National Lab., IL (United States). Oct 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-920944–5: 6. annual New York State Institute on Superconductivity (NYSIS) conference on superconductivity and applications, Buffalo, NY (United States), 15-17 Sep 1992). Order Number DE93002985. Source: OSTI; NTIS; GPO Dep.

A wide variety of layered materials have been found to be superconducting. Among these are graphite intercalation donor compounds, transition metal dichalcogenides, intercalated transition metal dichalcogenides, organic layered superconductors, artificial superlattices, and the cuprates. The normal state properties of all of these compounds are very similar, due to the fact that they all have well-defined Fermi surfaces, and quasi-linear in-plane resistivities at high temperatures. At lower temperatures, charge- or spin-density waves are common in these systems. With the exception of the graphite intercalation compounds, all of the fayered superconductors are type-II, and generally highly anisotropic in their superconducting properties. Dimensional crossover from anisotropic bulk to thin film behavior is common to many of these materials.

4689 (DOE/ER/40077–10) **High field superconductor development and understanding: A. Establishing the limits of performance of niobium-titanium; B. Establishing whether Chevrel phase materials could become useful high field superconductors: Final report.** Larbalestier, D.C.; Lee, P.J. Wisconsin Univ., Madison, WI (United States). Applied Superconductivity Center. May 1991. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-82ER40077. Order Number DE93005009. Source: OSTI; NTIS; INIS; GPO Dep.

Rapid progress in the development of high current density conductor in the period 1982–1992. At the beginning of this period the best strand for the FermiLab Tevatron was attaining 2000a/mm^2 at 5T (4.2K), with variable product quality; by 1991 commercial strand was obtainable at over 3000A/mm^2 in very long piece lengths. The most important contribution to this advance was the understanding of the role of the Nb-Ti microstructure in the determination of the intrinsic current carrying capacity of the strand. A complete wire fabrication facility was created at the UW making it possible to control all aspects of strand production. These facilities further accelerated our understanding of the extrinsic processing limitations to the J_c of the conductors. Results on Chevrel phase materials ($PbMo_8$) showed that HIP-ed samples had complete connectivity; there is no intrinsic granularity to Chevrel phases. Flux pinning was studied in $SnNo_6S_8$.

4690 (DOE/ER/45347–32) **[Strongly interacting fermion systems] annual progress report, November 15, 1992–November 14, 1993.** Ohio State Univ. Research Foundation, Columbus, OH (United States). the research has been concentrated in four areas: Methodology for large-scale or innovative computing; computation of complex structures or properties; many-body fermion systems (but not including superconductors); properties of many-body fermion systems believed to be relevant for high-temperature superconductors. All of these areas we put under the rubric of "strongly interacting fermions systems." The first two areas are more concerned with computational aspects and the latter two to specific problems with a stronger analytic aspect. However, in our Proposal Section we return to the appropriateness of the rubric "strongly interacting fermions."

4691 (IC–92/211) **Microscopic origin of marginal Fermi-liquid in strongly correlated spin systems.** Protogenov, A.P. (International Centre for Theoretical Physics, Trieste (Italy)); Ryndyk, D.A. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 15p. Order Number DE93608697. Source: OSTI; NTIS (US Sales Only); INIS.

We consider the consequences of separation of spin and charge degrees of freedom in 2+1D strongly correlated spin systems. Self-consistent spin and charge motions induced by doping in sites of ground and dual lattices form such a spectrum of quasiparticles which together with the dispersionless character of the collective excitation spectrum and the chemical potential pinning in the band centre yield the necessary behavior of charge and spin polarizability to support the theory of marginal liquid formulated by C.M. Varma et al. (Phys. Rev. Lett. 63, 1996 (1989)). (author). 28 refs, 4 figs.

4692 (IC–92/229) **Dependence of critical exponents on θ parameter in anyon lattice model.** Protegenov, A.P. (International Centre for Theoretical Physics, Trieste (Italy)); Verbus, V.A. International Centre for Theoretical Physics, Trieste (Italy). Aug 1992. 9p. Order Number DE93608698. Source: OSTI; NTIS (US Sales Only); INIS.

The critical behaviour in the Z_N model with θ-parameter is considered in the Coulomb gas representation. We focus our attention on the dependence of the critical exponents of the correlation functions of the Z_N-theory with $\theta=2\pi/N$ on the rank N of the group. (author). 20 refs.

4693 (KFK–4988) **Stability of superconducting cables for use in large magnet systems.** Schmidt, C. (Kernforschungszentrum Karlsruhe GmbH (Germany)); Tateishi, H. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Technische Physik; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion. Mar 1992. 32p. (In German). Order Number DE93742166. Source: OSTI; NTIS (US Sales Only); INIS.

The construction of large superconducting magnets requires the development of complicated conductor types, which can fulfill the specific requirements of different types of magnets. A rather hard boundary condition for large magnets is the presence of fast changing magnetic fields. In the Institute of Technical Physics a superconduction cable was developed for use in poloidal field coils in Tokamak experiments. This 'POLO'-cable exhibits low losses in a magnetic ac-field and a high stability margin. In the present article the requirements on a superconducting cable are described, as well as the mechanisms of ac-losses and the calculation of the stability limit. Calculated values are compared with experimental data. Some unresolved problems concerning the stability of large magnets are discussed taking the example of the POLO-cable. (orig.).

4694 (KFK–5008) **Numerical study of a 50 kA superconducting bus for the NET/ITER model coil test in TOSKA-upgrade.** Heller, R. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Technische Physik; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion. Mar 1992. 62p. Order Number DE93742165. Source: OSTI; NTIS (US Sales Only); INIS.

Based on the design of the supreconducting bus bar system for the 1.8 K test of the EURATOM LCT coil in the TOSKA Upgrade facility, a superconducting bus bar was designed for the NET/ITER model coil test for an operating current of 50 kA made out of a NbTi cable-in-conduit-conductor imbedded in a copper profile for electrical and mechanical stabilization. For safety reasons, the mass flow through the bus bar is designed as a separate circuit, i.e. the mass flow rates of the coil pancakes, the bus bar, and the current lead are independently adjustable. This results in a bus bar which is safe in case of loss of cooling. But the eddy current losses generated in the stabilizing cooper during the fast discharge of the model coils are by far too high, i.e. the bus bar will quench during high magnetic field changes. Therefore, alternatives are discussed in which the design principles of the bus bar were not changed but it was tried to reduce the eddy current losses in the copper stabilizer. The only possible alternative as a superconducting bus bar consisting of a cable-in-conduit(-CIC)-conductor without any stabilizing copper profile around it. The CIC is imbedded in a jacket made of stainless steel for mechanical stability. The calculations show that

this type of bus bar has a high safety margin with respect to AC-losses. In this report, the different designs are described, and the computational results are presented. (orig./GSCH).

4695 (LA-UR–92-3057) **The local structure of high-temperature superconductors.** Mustre de Leon, J.; Conradson, S.D.; Bishop, A.R.; Raistrick, I.D. Los Alamos National Lab., NM (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9208160–1: 7. international conference on x-ray absorption fine structure, Kobe (Japan), 23-29 Aug 1992). Order Number DE93000653. Source: OSTI; NTIS; INIS; GPO Dep.

We show how x-ray absorption fine structure (XAFS) has been successfully used in the determination of the local crystal structure of high-temperature superconductors, with advantages over traditional diffraction techniques. We review the experimental results that yielded the first evidence for an axial-oxygen-centered lattice instability connected with the superconductivity transition. The interpretation of this instability in terms of a dynamical tunneling model suggests the presence of polarons in these materials. XAFS on $Tl_2Ba_2CuO_6$ and other Tl-based superconductors indicate the presence of local instabilities in the CuO_2 planes of these materials, in addition to axial-oxygen instabilities.

4696 (LBL–32150) **Design of high-T_c superconducting bolometers for a far infrared imaging array.** Verghese, S. (Lawrence Berkeley Lab., CA (United States)); Richards, P.L.; Fork, D.K.; Char, K.; Geballe, T.H. Lawrence Berkeley Lab., CA (United States). Aug 1992. 7p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract AC03-76SF00098. F49620-89-C-0017. (CONF-920802–33: Applied superconductivity conference, Chicago, IL (United States), 23-28 Aug 1992). Order Number DE93002564. Source: OSTI; NTIS; GPO Dep.

The design of high-T_c superconducting bolometers for use in a far infrared imaging array from wavelengths 30–100μm is discussed. Measurements of the voltage noise in thin films of $YBa_2CU_3O_{7-\epsilon}$ on yttria-stabilized zirconia buffer layers on silicon substrates are used to make performance estimates. Useful opportunities exist for imaging and spectroscopy with bolometer arrays made on micro-machined silicon membranes. A circuit on each pixel which performs some signal integration can improve the sensitivity of large two-dimensional arrays of bolometers which use multiplexed readout amplifiers.

4697 (LBL–32660) **The fabrication and performance of $YBa_2Cu_3O_{7-x}$ SQUID magnetometers.** Kingston, J.J. Lawrence Berkeley Lab., CA (United States). Jul 1992. 126p. Sponsored by USDOE, Washington, DC (United States); California Competitive Technology Program, CA (United States). DOE Contract AC03-76SF00098. Order Number DE93002561. Source: OSTI; NTIS; GPO Dep.

To enhance the SQUID's field sensitivity, it is coupled to a flux transformer, a closed superconducting circuit consisting of a pickup loop, to which a signal is applied, connected in series to an input coil, which is inductively coupled to the SQUID. To fabricate an optimal flux transformer, one must use more than one superconducting thin-film layer, each of which is patterned into narrow strips or wires. Some wires from different layers cross, yet remain electrically isolated, to form crossovers, while in other places there must be superconducting contact between wires from different layers. Together, the superconducting wire, superconducting-superconducting contact and the superconducting crossover constitute a superconducting interconnect or multilayer wiring technology. We discuss the development of an interconnect technology involving the high transition temperature (T_c) superconductor $YBa_2Cu_3O_{7-x}$ (YBCO). Because of the need for epitaxial growth there are limits on materials for the insulating layer separating the YBCO films in multilayer structures, and on deposition and patterning techniques. We discuss the use of pulsed laser deposition in conjunction with patterning by shadow masks and later by photolithography to produce interconnects, multiturn input coils, and flux transformers. We also discuss the performance of SQUID magnetometers, in which a flux transformer fabricated on one substrate is coupled to a SQUID fabricated on another. The first magnetometers were hybrids – high $T_c$transformers coupled to low T_cSQUIDS, while later ones had both high $T_c$transformers and SQUIDs and could operate immersed in liquid nitrogen. We report on a magnetometer with a magnetic field sensitivity at lHz of about $2pTHz^{-1/2}$ at 77K, that was successfully used to perform magnetocardiograms on human subjects.

4698 **Process for producing clad superconductive materials.** Cass, R.B.; Ott, K.C.; Peterson, D.E. To Dept. of Energy. 19 Mar 1991. USAA patent application 7-671,23. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE93002030. Source: OSTI; NTIS; GPO Dep.

A process for fabricating superconducting composite wire by the steps of placing a superconductive precursor admixture capable of undergoing a self propagating combustion in stoichiometric amounts sufficient to form a superconductive product within a metal tube, sealing one end of said tube, igniting said superconductive precursor admixture whereby said superconductive precursor admixture endburns along the length of the admixture, and cross-section reducing said tube at a rate substantially equal to the rate of burning of said superconductive precursor admixture and at a point substantially planar with the burnfront of the superconductive precursor mixture, whereby a clad superconductive product is formed in situ, the product characterized as superconductive without a subsequent sintering stage, is disclosed.

4699 (SAND–92-1913C) **Flux flow microelectronics.** Martens, J.S. (Sandia National Labs., Albuquerque, NM (United States)); Hietala, V.M.; Plut, T.A.; Ginley, D.S.; Vawter, G.A.; Tigges, C.P.; Siegal, M.P.; Phillips, J.M.; Hou, S.Y. Sandia National Labs., Albuquerque, NM (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-920802–24: Applied superconductivity conference, Chicago, IL (United States), 23-28 Aug 1992). Order Number DE93000756. Source: OSTI; NTIS; GPO Dep.

Flux-flow based devices such as the superconducting flux flow transistor and magnetically controlled long junctions have been made from thin films of TlCaBaCuO and YBaCuO. The devices are based on the magnetic control of flux flow in their respective structures: a long junction or an array of weak links. The equivalent circuits of the two devices are similar: a low impedance input control line, an output impedance of 3–20 Ω and an active current-controlled element. The long junctions have tended to be slower, have lower gain and be somewhat less noisy than their counterparts. The performance of circuits such as narrowband and distributed amplifiers (50 GHz bandwidths, noise figures < 3 dB), phase shifters (continuous with < 2dB loss 4–40 GHz), logic gates (2–3 ps gate delays) and memories made using these devices will be compared and analyzed.

665420 Superfluidity

4700 (IC–92/244) **New edge magnetoplasmon for a two-dimensional electron gas in a ring geometry.** Proetto, C.R. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 12p. Order Number DE93608737. Source: OSTI; NTIS (US Sales Only); INIS.

The dynamical response of a classical two-dimensional electron gas confined in a ring geometry under a perpendicular magnetic field is analysed. Within the hydrodynamical approach and in the strong magnetic field limit, a new set of antidot edge magnetoplasmons is obtained, corresponding to density oscillations circulating along the inner boundary of the ring and whose frequency increases with magnetic field. The associated self-induced distribution of densities and currents are presented, together with an analysis of the size dependence of these perimeter waves. (author). 15 refs, 4 figs.

4701 (INIS-BR–2983) **Determination of thermal diffusivity at low temperature using the two-beam phase-lag photoacoustic method with observation of phase-transitions.** Jorge, M.P.P. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1992 93p. (In Portuguese). Order Number DE93608738. Source: OSTI; NTIS (US Sales Only); INIS.

This study consists of the determination of thermal diffusivity int he temperature range from 77 K to 300 K by the two-beam phase-lag photoacoustic method. Room temperature measurements of NTD (neutron transmutation doping) silicon suggest that the doping process does not affect its thermal properties. For the superconductor Y Ba_2 Cu_3 O_{7-x} it has been verified that the sample density affects its thermal diffusivity. The validity of the experimental method on the Li K SO_4 crystal has been examined by using the thermal diffusivity of a Li F crystal and an Y_2 O_3 ceramic, at room temperature. The behavior of the thermal diffusivity as a function of the temperature for the Li K SO_4 crystal shows two anomalies which correspond at phase-transitions of this crystal in the studied temperature range. (author).

4702 (INIS-BR–2992) **Effect of planar magnetic field on electron transport properties of n-AlGaAs/GaAs heterojunction and photoluminescence measures in GaAs samples.** Alves, A.R. Minas Gerais Univ., Belo Horizonte, MG (Brazil). Dept. de Fisica. 1991 104p. (In Portuguese). Order Number DE93608739. Source: OSTI; NTIS (US Sales Only); INIS.

The effects of magnetic fields applied parallel to the interface of an heterojunction n-Al Ga As is studied. A qualitative analysis has shown that this field modifies the Fermi surface of the two dimensional electron gas (2 DEG) confined on the heterojunction. it produces a strong asymmetry on the magnetoresistance of the 2 DEG relative to the two directions of the electric current. This interpretation is confirmed by a self-consistent numerical calculation involving a solution of the Schroedinger and Poisson equations. To verify this result, measurements with samples grown by Molecular Beam Epitaxy (MBE) under magnetic fields up to 13.0 T are performed and the results obtained confirm the asymmetry in the magnetoresistance. Also, a strong negative magnetoresistance attributed to the imperfections of the interface is seen. It can be used to evaluate the quality of the heterojunction interface. The details about the implantation of the photoluminescence measurement system are discussed. Spectra of an asymmetric quantum well and delta-doped Ga As : Si samples at 300 K and 55 K are shown. (author).

4703 (CONF-920913–18) **Poloidal flow generation by resistive pressure-gradient-driven turbulence.** Garcia, L. (Universidad Complutense and Asociacion Euratom-Ciemat, Madrid (Spain)); Carreras, B.A.; Lynch, V.E.; Diamond, P.H. Oak Ridge National Lab., TN (United States). [1992]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 14. international conference on plasma physics and controlled nuclear fusion research; Wuerzburg (Germany); 30 Sep - 7 oct 1992. Order Number DE93001638. Source: OSTI; NTIS; INIS; GPO Dep.

The radial structure of poloidal flows and radial electric fields in the tokamak plasma edge plays an important role in determining global confinement properties. In a turbulent plasma, poloidal flow can be generated through the Reynolds stress. At the same time, this poloidal flow controls the level of fluctuations. Thererfore, self-consistent calculations of plasma turbulence in the presence of flows are needed to identify the mechanism of confinement improvement. Here, we study the interaction. Linearly, both the shear flow, $V_\theta' \neq 0$, and the curvature flow, $V_\theta'' \neq 0$, are stabilizing. Nonlinearly, the effect of the shear flow is weak, while the curvature flow is robust and survives in the nonlinear regime.

4704 (CTH-IEFT-PP–1992-14) **Velocity shear effects in the problem of the electron temperature gradient instability induced by conducting end-walls.** Ryutov, D.; Weiland, J. Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1992]. 26p. Order Number DE93608546. Source: OSTI; NTIS; INIS.

The effects of shear in the ExB drift velocity are studied in connection with the recently discovered electron temperature gradient driven instability induced by conducting end plates. The transition between the temperature gradient driven mode and the Helmholtz-Kelvin instability is studied. (au).

4705 (CTH-IEFT-PP–1992-15) **CASINO, a code for simulation of charged particles in an axisymmetric Tokamak.** Dillner, Oe. Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1992]. 38p. Order Number DE93608547. Source: OSTI; NTIS; INIS.

The present report comprises a documentation of CASINO, a simulation code developed as a means for the study of high energy charged particles in an axisymmetric Tokamak. The background of the need for such a numerical tool is presented. In the description of the numerical model used for the orbit integration, the method using constants of motion, the Lao-Hirsman geometry for the flux surfaces and a method for reducing the necessary number of particles is elucidated. A brief outline of the calculational sequence is given as a flow chart. The essential routines and functions as well as the common blocks are briefly described. The input and output routines are shown. Finally the documentation is completed by a short discussion of possible extensions of the code and a test case. (au).

4706 (CTH-IEFT-PP–1992-16) **Subcritical reactive drift wave turbulence.** Nordman, H.; Pavlenko, V.P.; Weiland, J. Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1992]. 20p. Order Number DE93608569. Source: OSTI; NTIS; INIS.

The existence of self-sustained toroidal ηi mode turbulence below the instability threshold has been shown by mode coupling simulations. Significant transport and a tendency for long-wavelength condensation are observed. The subcritical behaviour is explained as a result of nonlinear interaction between modes of positive and negative energy by analytical calculation of the coupling factors. (20 refs.) (au).

This report discusses the following topics: Atomic data and line intensities; analysis of PLT spectra; zeeman splitting of magnetic dipole transitions; and level populations in dense plasmas.

4708 (DOE/ER/53194–5) **[Nonlinear magnetohydrodynamics].** Dartmouth Coll., Hanover, NH (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53194. Order Number DE93003241. Source: OSTI; NTIS; INIS; GPO Dep.

Theoretical predictions were compared with available data from JET on the threshold unstable MHD activity in toroidal confinement devices. In particular, questions arising as to Hartmans number and the selection of a kinematic viscosity are discussed.

4709 (DOE/ER/53212–198) **Theoretical reversed field pinch and tokamak studies: Progress report, November 1, 1991–June 15, 1992.** Wisconsin Univ., Madison, WI (United States). [1992]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53212. Order Number DE93002775. Source: OSTI; NTIS; INIS; GPO Dep.

In previous work, electrostatic fluctuations that couple the free energy sources of resistive interchange turbulence (resistive g mode) and resistivity gradient driven turbulence (Rippling mode) were studied analytically and numerically. Evaluation of the predicted fluctuation levels using realistic MST parameters and the best estimates of equilibrium profiles yielded levels that appeared to be too small to agree with experiment. This work calls into question the standard scenario in which g modes (or rippling modes) are presumed to govern edge transport and account for the high frequency fluctuation activity in the RFP.

Over the last several years, reflectometry has grown in importance as a diagnostic for both steady-state density Profiles as well as for the investigation of density fluctuations and turbulence. As a diagnostic for density profile measurement, it is generally believed to be well understood in the tokamak environment. However, its use as a fluctuation diagnostic is hampered by a lack of quantitative experimental understanding of its wavenumber sensitivity and spatial resolution. Several researchers, have theoretically investigated these questions. However, prior to the UCLA laboratory investigation, no group has experimentally investigated these questions. Because of the reflectometer's importance to the world effort in understanding plasma turbulence and transport, UCLA has, over the last year, made its primary Task IIIA effort the resolution of these questions. UCLA has taken the lead in a quantitative experimental understanding of reflectometer data as applied to the measurement of density fluctuations. In addition to this, work has proceeded on the design, construction, and installation of a reflectometer system on UCLA's CCT tokamak. This effort will allow a comparison between the improved confinement regimes (H-mode) observed on both the DIII-D and CCT machines with the goal of achieving a physics understanding of the phenomena. Preliminary investigation of a new diagnostic technique to measure density profiles as a function of time has been initiated at UCLA. The technique promises to be a valuable addition to the range of available plasma diagnostics. Work on advanced holographic reflectometry technique as applied to fluctuation diagnostics has awaited a better understanding of the reflectometer signal itself as discussed above. Efforts to ensure the transfer of the diagnostic developments have continued with particular attention devoted to the preliminary design of a multichannel FIR interferometer for MST.

4711 (DOE/ER/53236–T3) **High beta and second region stability analysis and ICRF edge modeling: Progress report, March 15, 1988–May 14, 1989.** Grumman Aerospace Corp., Princeton, NJ (United States). Corporate Research Center. [1989]. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER53236. Order Number DE93003774. Source: OSTI; NTIS; INIS; GPO Dep.

This report describes the tasks accomplished under Department of Energy contract #DE-FG02-86ER53236 in modeling the edge plasma-antenna interaction that occurs during Ion Cyclotron Range of Frequency (ICRF) heating. This work has resulted in the development of several codes which determine kinetic and fluid modifications to the edge plasma. When used in combination, these code predict the level of impurity generation observed in experiments on the experiments on the Princeton Large Torus. In addition, these models suggest improvements to the design of ICRF antennas. Also described is progress made on high beta and second region analysis. Code development for a comprehensive infernal mode analysis code is nearing completion. A method has been developed for parameterizing the second region of stability and is applied to circular cross section tokamas. Various studies for high beta experimental devices such as PBX-M and DIII-D have been carried out and are reported on.

4712 (GA-A–21041) **Bias-sustained shield plasma.** Staebler, G.M.; Hyatt, A.W.; Schaffer, M.J.; Mahdavi, M.A. General Atomics, San Diego, CA (United States). Sep 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-9209181–2: International Atomic Energy Agency (IAEA) technical committee meeting on tokamak plasma biasing, Montreal (Canada), 8-10 Sep 1992). Order Number DE93001908. Source: OSTI; NTIS; INIS; GPO Dep.

Divertor biasing may provide a method for density and impurity control by enhancing the shielding efficiency of the scrape-off layer. The idea is to make the scrape-off plasma denser and thicker by heating it with a bias-driven current, and by inducing a radial E x B drift. If the bias is applied to flux surfaces at the outer edge of the usual scrape-off layer, a new layer of plasma can be added which is sustained by the bias-supplied power. A simple theoretical model will be presented which shows that there is a threshold condition which must be satisfied in order for the bias-heated plasma to be self-sustaining. The bias-sustained plasma must also be opaque enough to neutrals in order for it to be fueled by a gas puff, which means that it win serve as a shield to the core plasma against neutral impurities and hydrogen. Experiments performed on DIII-D have demonstrated both a modification of the central nickel impurity concentration and an increase in the ionization of hydrogen within the scrape-off layer due to biasing.

4713 (IC–92/253) **Computer simulation of energy profiles in a plasma focus device.** Sigalo, F.B. (International Centre for Theoretical Physics, Trieste (Italy)); Gholap, A.V. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 17p. Order Number DE93608560. Source: OSTI; NTIS (US Sales Only); INIS.

The study of the dynamics of the plasma focus device has been treated to include the distribution profiles of kinetic energy, electrical energy and power input within the axial phase. The Snowplow model equation for plasma motion in one dimension and the equations for energies have been programmed for computer simulation. The distribution of the energies show strong dependence on the ratio of the periodic time of the external circuit to the transit time of the current sheath motion in the axial phase. (author). 15 refs, 7 figs.

4714 (IC–92/256) **Nonlinear radiation of waves at combination frequencies due to radiation-surface wave interaction in plasmas.** El Naggar, I.A. (Alexandria Univ. (Egypt). Dept. of Physics); Hussein, A.M.; Khalil, Sh.M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 8p. Order Number DE93608570. Source: OSTI; NTIS (US Sales Only); INIS.

Electromagnetic waves radiated with combination frequencies from a semi-bounded plasma due to nonlinear interaction of radiation with surface wave (both of P-polarization) has been investigated. Waves are radiated both into vacuum and plasma are found to be P-polarized. We take into consideration the continuity at the plasma boundary of the tangential components of the electric field of the waves. The case of normal incidence of radiation and rarefield plasma layer is also studied. (author). 7 refs.

4715 (IC–92/257) **Kinetic nonlinear electron-ion two stream instability in field-free isothermal plasma.** Khalil, Sh.M. (International Centre for Theoretical Physics, Trieste (Italy)); Sayed, Y.A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1992. 8p. Order Number DE93608571. Source: OSTI; NTIS (US Sales Only); INIS.

A nonlinear dispersion relation is derived and solved for a 1-D electron-ion two-stream (Buneman) instability which excited in isothermal field-free plasma. The major nonlinear mechanism is the quasilinear modification of the background distribution functions. We take into consideration the effect of the pair Coulomb collisions. The methods used here to solve the Vlasov's kinetic equation may also be used to investigate other types of current micro-instabilities in plasma. (author). 7 refs.

4716 (INIS-BR–3035) **Influence of a cylindrical column of rotating plasma on stability.** Rossato, L.C. Centro Tecnico Aeroespacial, Sao Jose dos Campos, SP (Brazil). Inst. Tecnologico de Aeronautica. 1975 49p. (In Portuguese). Order Number DE93608572. Source: OSTI; NTIS (US Sales Only); INIS.

The kink instability of a cylindrical column of rotating plasma, liable to a perturbation of the form f (r) exp [i(m -kz) + wt], under a condition kr<<m, was studied. It was concluded that as we increase the rotation, the interval of possible instabilities decreases. When the speed of rotation in the outlines of the plasma is equal to the speed of Alfven we will surely have stability. (author).

4717 (INPE–5255) **1990's annual report of INPE's Plasma Associated Laboratory.** Instituto de Pesquisas Espaciais (INPE), Sao Jose dos Campos, SP (Brazil). Jun 1991. 42p. (In Portuguese). (PRP–158.). Order Number DE93608544. Source: OSTI; NTIS (US Sales Only); INIS.

This is the 1990's annual report of INPE's Plasma Associated Laboratory it contains information on current research developed at the laboratory including quiescent plasma, magnetized plasma,

plasma centrifuge, plasma and radiation (gyrotron), ionic propulsion, and toroidal plasma. (A.C.A.S.).

4718 (INPE–5256) **Magnetic diagnostics for the proto-eta Tokamak.** Ferreira, J.L.; Aso, Y.; Ueda, M.; Ferreira, J.G. Instituto de Pesquisas Espaciais (INPE), Sao Jose dos Campos, SP (Brazil). Apr 1991. 24p. (CONF-9005433–: US-Brazil Expert's Workshop on Spherical Torus Experiments, Sao Jose dos Campos (Brazil), 1-9 May 1990; PRE–1680.). Order Number DE93608552. Source: OSTI; NTIS (US Sales Only); INIS.

This work gives a general view of the magnetic diagnostics rat will be used in the Proto-Eta Tokamak. These diagnostics will be useful tools to measure currents, electric and magnetic fields involved in the plasma magnetic confinement. (author).

4719 (INPE–5257) **Characterization of a gyrotron cavity at 10 GHz.** Castro, P.J. de; Castro, J.J.B. de; Correa, R.A.; Andrade Nono, M.C. de. Instituto de Pesquisas Espaciais (INPE), Sao Jose dos Campos, SP (Brazil). Apr 1991. 9p. (PRE–1681.). Order Number DE93608553. Source: OSTI; NTIS (US Sales Only); INIS.

Experiments have been conducted to characterize a gyrotron cavity designed to operate in the Te_{021} mode at 10 GHz. Small holes were introduced into the cavity to couple in and detect the probing power. Evaluation of the loaded Q factor is based on bandwidth measurements whereas standing-wave electric field profile is determined by using perturbation techniques. Good agreement between measured and predicted values of resonant frequencies and Q factors for several fundamental TE modes is found. (author).

4720 (INPE–5384) **Plasma diffusion through multi dipole magnetic fields.** Ferreira, J.L. Instituto de Pesquisas Espaciais (INPE), Sao Jose dos Campos, SP (Brazil). Mar 1992. 26p. (PRE–1750.). Order Number DE93608548. Source: OSTI; NTIS (US Sales Only); INIS.

The diffusion of a cold plasma through multi dipole fields of a magnetic picket fence is presented. The ion diffusion and trapping is determined by electric potentials inside the multi dipole fields. The electron diffusion is regulated by an anomalous transport process driven by low frequency fluctuations inside the magnetic sheath. Particles drifting with velocities above the ion acoustic speed generates high amplitude turbulent waves responsible for an anomalous diffusion process. (author).

4721 (INPE–5403) **Post-doctoral research work developed at the National Institute for Fusion Science - Japan.** Ueda, M. Instituto de Pesquisas Espaciais (INPE), Sao Jose dos Campos, SP (Brazil). May 1992. 22p. (In Portuguese). (PRP–169.). Order Number DE93608554. Source: OSTI; NTIS (US Sales Only); INIS.

This is a research report report on the work developed at the National Institute for Fusion Science - Japan, involving study of Beam Emission Spectroscopy. It describes the use of a fast neutral lithium beam (8 KeV) to measure the density profile in a Compact Helical Device. (A.C.A.S.).

4722 (INT–250/PS) **Search for nuclear fusion reaction in the $^3He\mu d$ system.** Balin, D.V. (Leningrad Nuclear Physics Institute, Gatchina, (Russian Federation)); Baturin, V.N.; Chestnov, Yu.A. Institute of Physics and Nuclear Techniques, Cracow (Poland). Jun 1991. 20p. Order Number DE93608592. Source: OSTI; NTIS (US Sales Only); INIS.

An attempt is made to observe muon catalysis of the fusion reaction $d + {}^3He \rightarrow {}^4He + p$ in the $^3He\mu d$ system. High pressure ($\simeq$ 100 atm.) ionization chamber filled with a deuterium-^{3}He mixture at room temperature was exposed to the negative muon beam of the synchrocyclotron at the Leningrad Nuclear Physics Institute to detect ^{4}He + p signals. The analysis of the obtained charged particle energy spectra shows no evidence for this reaction at the level of $\lambda_f > 7 \times 10^7\ s^{-1}$ where λ_f is the fusion rate averaged over the angular momentum states of the $^3He\mu d$ system. Possibilities of further investigations are discussed. (author).

4723 (INT–254/PS) **Hyperfine stucture effects in the collisions of the 2s metastable muonic hydrogen with hydrogen atoms.** Mikhailov, A.I. (Leningrad Nuclear Physics Institute, Gatchina (Russian Federation)); Czaplinski, W.; Gula, A. Institute of Physics and Nuclear Techniques, Cracow (Poland). Jun 1991. 32p. Order Number DE93608593. Source: OSTI; NTIS (US Sales Only); INIS.

Cross sections for elastic and spin-flip scattering of metastable 2s muonic hydrogen atoms are calculated for the symmetric systems: $p\mu$+H, $d\mu$+D and $t\mu$+T. The calculations are performed in the two-level approximation of the adiabatic method with inclusion of Lamb shift and electron screening. Due to large polarizability of the 2s state, the obtained cross sections significantly exceeded their counterparts for the ground state muonic hydrogen. (author) PL9200295.

4724 (JET-R–(92)-05) **Mapping techniques for solving non-integrable Hamiltonian systems.** Montvai, A. (CRIP, Budapest (Hungary)); Finckenstein, K.G.F. von; Duechs, D.F. Commission of the European Communities, Abingdon (UK). JET Joint Undertaking. May 1992. 44p. Order Number DE93608545. Source: OSTI; NTIS (US Sales Only); INIS.

In the research area of hot plasma confinement by magnetic fields e.g. for controlled thermonuclear fusion, the detailed calculation of magnetic field lines is obviously of fundamental importance. Magnetic field lines are idealised flux tubes conserving the enclosed magnetic flux along their way. This is one of the reasons why B-field line equations can be recast in the form of a Hamiltonian system of equations. In general, the physically interesting sets of equations are non-linear and coupled. Traditional analytic methods for their solution are available only in very special cases. Therefore, this report is devoted to the numerical solution of such a system, i.e., slightly generalised, to the solution of initial value problems for sets of first order differential equations. Because the system described is in practice always non-linear analytic solutions can not be found in general. (author).

4725 (LRP–456/92, pp. 25) **Anisotropic pressure numerical 3D MHD equilibria.** Hirshman, S.P. (Oak Ridge National Lab., TN (United States)); Cooper, W.A.; Merazzi, S.; Gruber, R. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). May 1992. (CONF-920610–: 14. international conference on plasma and 19th EPS conference on controlled fusion and plasma physics, Innsbruck (Austria), 29 Jun - 3 jul 1992). In *Papers contributed to the 19. EPS conference on controlled fusion and plasma physics.* vp. Order Number DE93000810. Source: OSTI; NTIS; INIS.

It is demonstrated that the minimisation of en energy functional can be used to determine three dimensional (3D) magnetohydrodynamic (MHD) equilibria with anisotropic pressure. 2 figs., 5 refs.

4726 (LRP–456/92, pp. 25) **Stabilization of axisymmetric modes and the effects of plasma deformability in elongated tokamak plasmas using active feedback coils inside and outside the vacuum vessel.** Ward, D.J. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Hofmann, F. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). May 1992. In *Papers contributed to the 19. EPS conference on controlled fusion and plasma physics.* [25] Order Number DE93000810. Source: OSTI; NTIS; INIS.

In this paper we study the feedback stabilization of the vertical instability in a highly elongated ($\kappa = 3$) TCV plasma using a combination of active coils inside and outside the vacuum vessel. The TCV is a tokamak under construction at the CRPP in Lausanne. It is designed to create plasmas with a variety of cross-sectional shapes with elongations up to $\kappa = 3$. We calculate axisymmetric stability using the NOVA-W code. It has been observed that the deformation of the eigenfunction plays a crucial role in the ability of the feedback system to successfully stabilize the plasma. It is important to understand the deformation of the eigenfunction resulting from a particular choice of active coils in order to choose an appropriate set of magnetic measurements to determine the vertical displacement. The use of internal and external active coils imposes a particular deformation that allows one to choose a small number of well placed measurements. A large number of magnetic measurements distributed around the plasma does not necessarily improve matters, and in fact can be much less effective than a

smaller number of well placed measurements. The deformation of the eigenfunction is also strongly affected by the distribution of currents in the external coils. (author) 3 figs., 3 refs.

4727 (PPPL–2855) **Particle balance in a TFTR supershot.** Budny, R.V.; Coster, D.; Stotler, D.; Bell, M.G.; Janos, A.C.; Owens, D.K. Princeton Univ., NJ (United States). Plasma Physics Lab. Nov 1992. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (CONF-920311–26: 10. international conference on plasma-surface interactions in controlled fusion devices, Monterey, CA (United States), 30 Mar - 3 apr 1992). Order Number DE93003289. Source: OSTI; NTIS; INIS; GPO Dep.

Particle balance has been studied self-consistently for a TFTR supershot during a relatively steady-state phase of the neutral beam injection. The TRANSP analysis code was used to model plasma parameters within the last closed flux surface, deriving time-dependent plasma profiles from measurements. The poloidal flux surfaces were obtained from TRANSP and an equivalent-filament analysis code. The edge plasma and recycling were modeled using the combined B2/DEGAS code with boundary conditions from the TRANSP modeling. The edge and scrape-off modeling results are compared with measurements of the $D\alpha$ emission and temperature increases in the inner limiter.

4728 (PPPL–2856) **Transport of energetic ions by low-n magnetic perturbations.** Mynick, H.E. Princeton Univ., NJ (United States). Plasma Physics Lab. Oct 1992. 37p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE93002633. Source: OSTI; NTIS; INIS; GPO Dep.

The stochastic transport of MeV ions induced by low-n magnetic perturbations is studied, focussing chiefly on the stochastic mechanism operative for passing particles in low frequency perturbations. Beginning with a single-harmonic form for the perturbing field, it iii first shown numerically and analytically that the stochastic threshold of energetic particles can be much lower than that of the magnetic field, contrary to earlier expectations, so that MHD perturbations could cause appreciable loss of energetic ions without destroying the bulk confinement. The analytic theory is then extended in a number of directions, to darity the relation of the present stochaistic mechanism to instances already found, to allow for more complex perturbations, and to consider the more general relationship between the stochasticity of magnetic fields, and that of particles of differing energies (and pitch angles) moving in those fields. It is shown that the stochastic threshold is in general a non-monotonic function of energy, whose form can to some extent be tailored to achieve desired goals (e.g., burn control or ash removal) by a judicious choice of the perturbation. Illustrative perturbations are exhibited which are stochastic for low but not for high-energy ions, for high but not for low-energy ions, and for intermediate-energy ions, but not for low or high energy. The second possibility is the behavior needed for burn control; the third provides a possible mechanism for ash removal.

4729 (PPPL-CFP–2755) **The relationship between turbulence measurements and transport in different heating regimes in TFTR.** Bretz, N.L. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Mazzucato, E.; Nazikian, R.; Paul, S.F.; Hammett, G.; Rewoldt, G.; Tang, W.M.; Zarnstorff, M.C.; Fonck, R.J.; Durst, R.; Cosby, G. Princeton Univ., NJ (United States). Plasma Physics Lab. [1992]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (CONF-920913–16: 14. international conference on plasma physics and controlled nuclear fusion research, Wuerzburg (Germany), 30 Sep - 7 oct 1992; IAEA-CN–56/A-7-17). Order Number DE93002101. Source: OSTI; NTIS; INIS; GPO Dep.

The scaling of broad band density fluctuations in the confinement zone of TFTR measured by microwave scattering, beam emission spectroscopy (BES), and reflectometry show a relationship between these fluctuations and energy transport measured from power balance calculations. In L-mode plasmas scattering and BES indicates that the density fluctuation level, δn^2, in the confinement zone for $0.2 < k_\perp ps < 1.0$ depends qualitatively on P_{aux} and I_p in a way that is consistent with variations in energy transport. Fluctuation levels measured with all systems increase strongly toward the edge in all heating regimes following increases in energy transport coefficients. Measurements using BES have shown that poloidal and radial correlation lengths in the confinement zone of L-mode and supershot plasmas fall in the range of 1 to 2 cm. with a wave structure which has $k_{max} \approx 1\ cm^{-1}$ ($k_\perp ps \approx 0.2$) in the poloidal direction and k_{max} approaching zero in the radial direction. A simple estimate of the diffusion coefficient based on a measured radial correlation length and correlation time indicates good agreement with power balance calculations. Similar estimates using reflectometry give radial coherence lengths at 10 to 20 kHz in low density ohmic and supershot plasmas of between I and 2 cm.

4730 (PPPL-CFP–2756) **Novel current drive experiments on the CDX-U, HIT, and DIII-D Tokamaks.** Ono, M. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Forest, C.B.; Hwang, Y.S.; Armstrong, R.J.; Choe, W.; Darrow, D.S.; Greene, G.; Jones, T.; Jarboe, T.R.; Martin, A.; Nelson, B.A.; Orvis, D.; Painter, C.; Zhou, L.; Rogers, J.A.; Schaffer,Princeton Univ., NJ (United States). (CONF-920913–17: 14. international conference on plasma physics and controlled nuclear fusion research, Wuerzburg (Germany), 30 Sep - 7 oct 1992; IAEA-CN–56/E-2-5). Order Number DE93002102. Source: OSTI; NTIS; INIS; GPO Dep.

Two types of novel, non-inductive current drive concepts for starting-up and maintaining tokamak discharges have been developed on the CDX-U, HIT, and DIII-D Tokamaks. On CDX-U, a new, non-inductive current drive technique utilizing fully internally generated pressure driven currents has been demonstrated. The measured current density profile shows a non-hollow profile which agrees with a modeling calculation including helicity conserving non-classical current transport providing the "seed current". Another current drive concept, dc-helicity injection, has been investigated on, CDX-U, HIT and DIII-D. This method utilizes injection of magnetic helicity via low energy electron currents, maintaining the plasma current through helicity conserving relaxiation. In these experiments, non-ohmic tokamak plasmas were formed and maintained in the tens of kA range.

4731 (PPPL-CFP–2757) **Electron ripple injection concept for transport control.** Choe, W.; Ono, M.; Hwang, Y.S. Princeton Univ., NJ (United States). Plasma Physics Lab. [1992]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (CONF-9209181–3: International Atomic Energy Agency (IAEA) technical committee meeting on tokamak plasma biasing, Montreal (Canada), 8-10 Sep 1992). Order Number DE93002103. Source: OSTI; NTIS; INIS; GPO Dep.

Recent experiments in many devices have provided firm evidence that the edge radial electric field profile differs between L- and H-modes, and that these fields can greatly modify transport in tokamak plasmas. A nonintrusive method for inducing radial electric field based on electron ripple injection is being developed by the CDX-U group. This technique utilizes a pair of special coils to create a local magnetic field ripple to trap the electrons at the edge of the plasma. The trapped electrons then drift into the plasma due to the ∇B drift. An ECH power is applied to accelerate electrons to sufficient perpendicular energy to penetrate into the plasma. Application of ECH power to the trapped electrons should provide the desired 20 A of electron current with electrons of a few keV of energy and $v_\perp/v_\parallel \gg 1$. A controlled experiment to investigate the physics of ECH aided ripple injection has been designed on CDX-U. With the set of ripple coils designed for CDX-U, a ripple fraction of $\delta\ (= \nabla B/B_{av}) \sim 5\%$ is attainable. At this ripple fraction, electrons are trapped if $v_\perp/v_\parallel \gg 1 > (2\delta)^{\frac{-1}{2}} \approx 3$. A resonant cavity box was fabricated for efficient heating of the trapped electrons. It is also capable of measuring the effect of the field ripple in conjunction with trapped electrons. Some preliminary results are given.

4732 (PPPL-CFP–2758) **Emissive limiter bias experiment for improved confinement of tokamaks.** Choe, W. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Ono, M.; Darrow, D.S.; Pribyl, P.A.; Liberati, J.R.; Taylor, R.J. Princeton Univ., NJ (United States). Plasma Physics Lab. [1992]. 19p. Sponsored by

USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073 ;FG03-86ER53225. (CONF-9209181–4: International Atomic Energy Agency (IAEA) technical committee meeting on tokamak plasma biasing, Montreal (Canada), 8-10 Sep 1992). Order Number DE93002100. Source: OSTI; NTIS; INIS; GPO Dep.

Experiments have been performed in Ohmic discharges of the UCLA CCT tokamak with a LaB_6 biased limiter, capable of emitting energetic electrons as a technique to improve confinement in tokamaks. To study the effects of emitted electrons, the limiter position, bias voltage, and plasma position were varied. The results have shown that the plasma positioning with respect to the emissive limiter plays an important role in obtaining H-mode plasmas. The emissive cathode must be located close to the last closed flux surface in order to charge up the plasma. As the cathode is moved closer to the wall, the positioning of the plasma becomes more critical since the plasma can easily detach from the cathode and reattach to the wall, resulting in the termination of H-mode. The emissive capability appears to be important for operating at lower bias voltage and reducing impurity levels in the plasma. With a heated cathode, transition to H-mode was observed for $V_{bias} \leq 50$ V and $I_{inj} \geq 30$ A. At a lower cathode heater current, a higher bias voltage is required for the transition. Moreover, with a lower cathode heater current, the time delay for inducing H-mode becomes longer, which can be attributed to the required time for the self-heating of the cathode to reach the emissive temperature. From this result, we conclude that the capacity for emission can significantly improve the performance of limiter biasing for inducing H-mode transition. With L-mode plasmas, the injection current flowing out of the cathode was generally higher than 100 A.

4733 (SINS–2088/P-2/PL/A) **Search for a nuclear signature of the electrolytically induced cold fusion.** Wojtkowska, J. (Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland)); Glowacki, S.; Jaskola, M.; Moroz, Z.; Ratynski, W.; Kedzierzawski, P.; Zoltowski, P. Soltan Inst. for Nuclear Studies, Otwock-Swierk (Poland). Aug 1991. 9p. (CONF-9110326–: European conference on laser interaction with matter (ECLIM), Warsaw (Poland), 21-25 Oct 1991). Order Number DE93608556. Source: OSTI; NTIS (US Sales Only); INIS.

Report received in March 1992.

Results of approximate (under assumption of weak refraction) Abel inverse transformation applied to refraction and optical path difference data calculated for strongly refracting axisymmetric electron density profiles are presented. Computer simulation has been carried out for exponential electron density distributions, which may be used to describe analytically an electron density profile of a laser-produced plasma. Parameters of these profiles were chosen to cover the range of experimentally observed electron density shapes when high power laser beam-plasma interaction is under investigation. The results, for two most commonly used probing radiation wavelengths 0.53 μm and 0.27 μm, are presented. It is concluded that, for the electron density profiles under investigation and for reasonable scale length factor values, inversion schemes of refraction and optical path difference data based on weak or negligible refraction assumption can work even if the strong refraction of the probing radiation occurs. (author).

4736 (UCRL-LR–110877) **Dielectronic recombination of highly charged ions using an electron beam ion trap.** DeWitt, D.R. Lawrence Livermore National Lab., CA (United States). 16 Jun 1992. 195p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE92041090. Source: OSTI; NTIS; GPO Dep.

Thesis submitted to University of California, Davis.

Dielectronic Recombination is an important electron-ion recombination process which affects many aspects of plasmas. This work presents experimental measurements of relative dielectronic recombination cross sections for three highly charged ions: hydrogenlike argon (Ar^{17+}), heliumlike argon (Ar^{16+}), and neonlike xenon (Xe^{44+}). The dielectronic recombination cross sections are compared to theoretical resonance strengths. Excellent agreement is found overall. The energy resolution of the experimental measurements is 18 eV FWHM. These experiments make use of the ion extraction system recently installed on the Electron Beam Ion Trap (EBIT). With this technique the interactions are measured through measurement of relative ion populations rather than relative x-ray intensities.

4737 (UW-CPTC–92-5) **Long wavelength magnetic fluctuations in toroidal plasmas.** Hegna, C.C.; Callen, J.D. Wisconsin Univ., Madison, WI (United States). Oct 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER53218. (CONF-9207157–1: 1992 Cargese magnetic turbulence and transport workshop, Cargese (France), 6-12 Jul 1992). Order Number DE93002352. Source: OSTI; NTIS; INIS; GPO Dep.

Fluctuating bootstrap currents provide a mechanism for long wavelength electromagnetic fluctuations in tokamak plasmas. The existence of micro-magnetic islands may be responsible for the experimental observations of core density fluctuations. A fluctuation model is introduced for the tokamak that describes the magnetic topology as a time-varying mix of magnetic islands, stochastic zones and "good" magnetic surfaces.

DOE Contract AC02-76CH00016. (CONF-9209103–1: European research conference on nuclear physics: prospects for heavy ion inertial fusion, Aghia Pelaghia (Greece), 27 Sep - 1 oct 1992). Order Number DE93001978. Source: OSTI; NTIS; INIS; GPO Dep.

Two methods are investigated in this paper to convert the released fusion energy directly in electric power. The first is very simply the use of a beam of protons traversing a fixed target of Boron. Unfortunately this method cannot be made to work, but its investigation naturally yields to the second method which makes use of two beams, one of protons and one of ions of Boron, colliding with each other. This second method is feasible but it requires a significant amount of research and development in accelerator technology.

California Univ., Los Angeles, CA (United States). [1985]. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-85ER51069. Order Number DE93004139. Source: OSTI; NTIS; GPO Dep.

During the first quarter, the UCLA members of the ALT-II team worked primarily on the development of the experimental program plan and the diagnostics selection, and on the data acquisition system. These programs are discussed in this report.

4741 (DOE/ER/51069–T5) **ALT-II progress report and proposal, December 1989–December 1990.** California Univ., Los Angeles, CA (United States). [1989]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-85ER51069. Order Number DE93004142. Source: OSTI; NTIS; INIS; GPO Dep.

The Advanced Limiter Test (ALT-11) is a joint international program among the United States, the Federal Republic of Germany, and Japan to investigate the performance of a toroidal belt pump limiter in a tokamak, to investigate the behavior of the plasma edge, and to relate edge behavior to overall core energy and particle confinement. The experiments are carried out in the TEXTOR tokamak at KFA Juelich, Federal Republic of Germany. The ALT-II experiment was installed in TEXTOR in 1987 with the objectives of optimizing plasma performance in a limiter tokamak, and of studying the physics of particle removal, density and impurity control, and confinement enhancement by a toroidal belt pump limiter. The ALT-II program addresses large area limiter tokamak operation issues by providing a program specifically directed toward plasma optimization and particle and impurity control by a toroidal belt limiter in a machine dedicated to the investigation of plasma-wall interactions. TEXTOR features the most advanced set of edge plasma diagnostics of any tokamak for the task of diagnosing and understanding the impact of the limiter on the plasma confinement and performance. With the addition of 3.4 MW of neutral beam injection heating (NBI) to the existing 4 MW of ion cyclotron resonance heating (ICRH), TEXTOR also provides power densities equivalent to larger tokamaks.

4742 (DOE/ER/51069–T6) **ALT-II program progress report for FY92.** California Univ., Los Angeles, CA (United States). 26 May 1992. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-85ER51069. Order Number DE93004143. Source: OSTI; NTIS; INIS; GPO Dep.

In FY92, the ALT-II program is concentrating on three main physics areas: pumped limiter experiments, which include He exhaust and high density high power operation; limiter bias experiments focused on modifying edge transport and particle removal; and and edge transport and flow studies, which examine the equilibrium edge flows and transport physics during Ohmic, L-mode, Supershot, and H-mode confinement regimes. In support of these physics objectives, a CCD diagnostic system has been delivered to TEXTOR and is being used to supplement the previous ALT-II diagnostic system. A second fast-scanning Langmuir probe was constructed at UCLA and has been delivered to TEXTOR for use in studies of edge plasma flows, turbulent transport, and poloidal asymmetries. A brief synopsis of each topic is given below. Work will continue on these physics topics during the balance of FY92.

4743 (DOE/ER/52124–T2) **Fusion neutronics experiments and analysis: Progress report, November 1, 1991–October 31, 1992.** California Univ., Los Angeles, CA (United States). [1992]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-86ER52124. Order Number DE93003266. Source: OSTI; NTIS; INIS; GPO Dep.

UCLA has led the neutronics R&D effort in the US for the past several years through the well-established USDOE/JAERI Collaborative Program on Fusion Neutronics. Significant contributions have been made in providing solid bases for advancing the neutronics testing capabilities in fusion reactors. This resulted from the hands-on experience gained from conducting several fusion integral experiments to quantify the prediction uncertainties of key blanket design parameters such as tritium production rate, activation, and nuclear heating, and when possible, to narrow the gap between calculational results and measurements through improving nuclear data base and codes capabilities. The current focus is to conduct the experiments in an annular configuration where the test assembly totally surrounds a simulated line source. The simulated line source is the first-of-a-kind in the scope of fusion integral experiments and presents a significant contribution to the world of fusion neutronics. The experiments proceeded through Phase IIIA to Phase IIIC in these line source simulation experiments started in 1989.

4744 (DOE/ER/52158–3) **Tokamak reactor systems studies: Progress report, November 1, 1991–October 31, 1992.** Wisconsin Univ., Madison, WI (United States). Fusion Technology Inst. 27 Aug 1992. 5p. A summary of work completed on the ARIES project during this report period is given. The main areas of effort were: neutronics, shield optimization and design, safety, systems, startup and shutdown, and ripple loss. (MOW)

4745 (EGG-FSP–10323) **Secondary Containment System component failure data analysis from 1984 to 1991.** Cadwallader, L.C. (EG and G Idaho, Inc., Idaho Falls, ID (United States)); Sanchez, D.P. EG and G Idaho, Inc., Idaho Falls, ID (United States). Aug 1992. 66p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE93001928. Source: OSTI; NTIS; INIS; GPO Dep.

This report gives the failure rates for the major tritium containing glovebox systems that comprise the Secondary Containment System at the Tritium systems Test Assembly, which is a fusion research and technology facility at the Los Alamos National Laboratory. The component failure reports, the numbers of components, and operating times or demands are all given in this report, and sample calculations of the binomial demand failure rates and poisson hourly failure rates are given in the appendices. The failure rates for these components form a solid data point based on actual operating experience, where there is very little published information. The eight years of nearly continuous Secondary Containment System operations should result in steady state failure rate values. These data should be useful for future fusion reactor design work and safety assessment tasks.

4746 (EGG-FSP–10396) **Exploratory study of burn time, duty factor, and fluence on ITER activation hazards.** Piet, S.J. EG and G Idaho, Inc., Idaho Falls, ID (United States). Aug 1992. 70p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE93001921. Source: OSTI; NTIS; INIS; GPO Dep.

The safety analyses for the Conceptual Design Activity (CDA) of the International Thermonuclear Experimental Reactor (ITER) were based on the simplifying assumption that the activation of materials occurs continuously. Since the analyses showed a significant hazard, it is appropriate to examine how much hazard reduction might occur if this conservative assumption were relaxed. This report explores how much reduction might be gained by considering non-continuous operation, that is, by considering plasma burn time, duty factor, and integrated fluence. Other factors impacting activation hazards - material choice, flux, and size - are not considered here.

4747 (GA-A–21016) **Design and analysis of the cryopump for the DIII-D advanced divertor.** Reis, E. (General Atomics, San Diego, CA (United States)); Almajan, I.; Baxi, C.B.; Schaffer, M.J.; Sevier, D.L.; Smith, J.P.; Menon, M.M. General Atomics, San Diego, CA (United States). Sep 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-920930–7: 17. symposium on fusion technology, Rome

(Italy), 14-18 Sep 1992). Order Number DE93001357. Source: OSTI; NTIS; INIS; GPO Dep.

A cryocondensation pump for the DIII-D advanced diverter program is to be installed in the vacuum vessel in the fall of 1992. The purpose of the cryopump is to remove gas from the diverter, reduce recycling to the plasma, and to provide reduced density plasmas for experimental study. The pump is designed for a pumping speed of 50,000 l/s at 0.4 mtorr. The major pump components are toroidally continuous to minimize inductive voltages, thereby greatly reducing the risk of any electrical breakdown during disruptions. The cryopump consists of a 25mm Inconel tube, 10m long, cooled by liquid helium. It is surrounded by liquid nitrogen-cooled shields and a segmented ambient temperature radiation/particle shield. The outer nitrogen shield has a toroidally discontinuous copper coating to enhance thermal conductivity while maintaining a high toroidal electrical resistance to minimize electromagnetic loads during disruptions. The pump is cooled by 10 g/s of liquid helium at an inlet pressure of 115 kPa and temperature of 4.35 K. The pump is subjected to a steady-state heat load of <10 W due to conduction and radiation heat transfer. The helium tube will be subjected to Joule heating of <182J due to induced current and a particle load of <20 W during plasma operation. Thermal analysis and tests show that the helium tube can absorb a transient heat load of up to 100 W for 10s and still pump deuterium at 6.3 K.

4748 (GA-A–21036) **New DIII-D tokamak plasma control system.** Campbell, G.L. (General Atomics, San Diego, CA (United States)); Ferron, J.R.; McKee, E.; Nerem, A.; Smith, T; Greenfield, C.M.; Pinsker, R.I.; Lazarus, E.A. General Atomics, San Diego, CA (United States). Sep 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-920930–5: 17. symposium on fusion technology, Rome (Italy), 14-18 Sep 1992). Order Number DE93000877. Source: OSTI; NTIS; INIS; GPO Dep.

A state-of-the-art plasma control system has been constructed for use on the DIII-D tokamak to provide high speed real time data acquisition and feedback control of DIII-D plasma parameters. This new system has increased the precision to which discharge shape and position parameters can be maintained and has provided the means to rapidly change from one plasma configuration to another. The capability to control the plasma total energy and the ICRF antenna loading resistance has been demonstrated. The speed and accuracy of this digital system will allow control of the current drive and heating systems in order to regulate the current and pressure profiles and diverter power deposition in the DIII-D machine. Use of this system will allow the machine and power supplies to be better protected from undesirable operating regimes. The advanced control system is also suitable for control algorithm development for future machines in these areas and others such as disruption avoidance. The DIII-D tokamak facility is operated for the US Department of Energy by General Atomics Company (GA) in San Diego, California. The DIII-D experimental program will increase emphasis on rf heating and current drive in the near future and is installing a cryopumped divertor ring during the fall of 1992. To improve the flexibility of this machine for these experiments, the new shape control system was implemented. The new advanced plasma control system has enhanced the capabilities of the DIII-D machine and provides a data acquisition and control platform that promises to be useful far beyond its original charter.

4749 (JET-R–(92)-04) **Review of NB_3 SN magnets completed or under manufacture and relevant for future fusion magnets.** Poehlchen, R. Commission of the European Communities, Abingdon (UK). JET Joint Undertaking. May 1992. 23p. Order Number DE93608604. Source: OSTI; NTIS (US Sales Only); INIS.

Nb_3Sn magnets make use of a forced flow of helium in the longitudinal direction through the individual conductor. The well established vacuum-pressure-impregnation process can be employed in order to achieve a mechanically monolithic winding pack with a highly reliable electric insulation with a high electric strength of 20 KV and above. This is of crucial importance for the Poloidal Coils in normal operation already, but even more important in case of a fast discharge of the Poloidal Coil system or the Toroidal Coil system. The higher the acceptable dump voltage is, the faster the discharge can be thus, making it easier to keep hot spot temperatures at acceptable levels. (author).

4750 (KFK–5045) **Report of results and of research and development work at the Institute of Technical Physics 1991.** Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Technische Physik. Mar 1992. 45p. (In German). Order Number DE93729064. Source: OSTI; NTIS (US Sales Only); INIS.

The central areas of work are superconductivity and its applications, cryo-technology and microwave technology. The main point of technical development is the construction of magnets for the nuclear fusion project NET/ITER. Basic investigations concern low temperature and superconductor materials such as $YBa_2Cu_3O_{7-x}$ single crystals. (DG).

4751 (KFK–5059) **Preliminary safety assessment of the NET magnet system.** Kramer, W.; Meyder, R.; Raff, S.; Juengst, K.P.; Kronhardt, H. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Reaktorsicherheit; Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Technische Physik; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion. Aug 1992. 75p. Order Number DE93729165. Source: OSTI; NTIS (US Sales Only); INIS.

After a characterization of the magnet system for the conceptual design of ITER previous failures of superconducting magnets are briefly reviewed. Possible accidents are discussed leading to the definition of so-called reference accident sequences. Since the magnet system does not contain significant radioactivity inventories the large stored energies are considered mainly to have the potential to initiate or enhance accidents. Of most concern are those events having a potential to propagate from the magnet system to adjacent radioactivity confining components. In this sense, the following events are considered to have a potential of failure propagation: (1) Uncontrolled growing of a normal conduction zone, (2) shorts and arcs outside and inside a coil, (3) coil deformation or displacement, and (4) volume change of cryogenic helium. The main part deals with the assessment of items (1) to (3), this means in detail thermal failures, the behaviour of shorts and arcs, and the mechanical consequences of electrical faults. (orig./HP).

4752 (LBL–32213) **ILSE: The next step toward a heavy Ion induction accelerator for inertial fusion energy.** Fessenden, T. (Lawrence Berkeley Lab., CA (United States)); Bangerter, R.; Berners, D.; Chew, J.; Eylon, S.; Faltens, A.; Fawley, W.; Fong, C.; Fong, M.; Hahn, K.; Henestroza, E.; Judd, D.; Lee, E.; Lionberger, C.; Mukherjee, S.; Peters, C.; Pike, C.; RaymLawrence Berkeley Lab., CA (United States). Jul 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (HIFAN–538;IAEA-CN–56/B-2-3;CONF-920913–15: 14. international conference on plasma physics and controlled nuclear fusion research, Wuerzburg (Germany), 30 Sep - 7 oct 1992). Order Number DE93000345. Source: OSTI; NTIS; INIS; GPO Dep.

LBL and LLNL propose to build, at LBL, the Induction Linac Systems Experiments (ILSE), the next logical step towards the eventual goal of a heavy-ion induction accelerator powerful enough to implode or "drive" inertial-confinement fusion targets. ILSE, although much smaller than a driver, will be the first experiment at full driver scale in several important parameters. Most notable among these are line charge density and beam cross section. Many other accelerator components and beam manipulations needed for an inertial fusion energy (IFE) driver will be tested. The ILSE accelerator and research program will permit experimental study of those beam manipulations required of an induction linac inertial fusion driver which have not been tested sufficiently in previous experiments, and will provide a step toward driver technology.

4753 (PNL-SA–20872) **BEATRIX-II: In situ tritium recovery from Li_2O and Li_2ZrO_3 irradiated in a fast neutron flux.** Slagle, O.D. (Pacific Northwest Lab., Richland, WA (United States)); Hollenberg, G.W.; Kurasawa, T.; Verrall, R.A. Pacific Northwest Lab., Richland, WA (United States). Sep 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920930–12: 17. symposium on fusion technology, Rome (Italy), 14-18 Sep 1992). Order Number DE93001560. Source: OSTI; NTIS; INIS; GPO Dep.

The BEATRIX-II irradiation experiment was an in situ, fast neutron, tritium release experiment to evaluate the performance of ceramic fusion solid breeders at extended burnups. The experiment consisted of two sequential irradiations: Phase I for 300 EFPD and Phase II for 200 EFPD that resulted in lithium burnups from 4–6%. Thin-walled Li_2O ring specimens capable of temperature changes were irradiated in both Phase I and Phase II. Temperature changes were also used to determine the tritium inventory and to characterize the effect or irradiation history and sweep gas composition. Solid-cylindrical temperature-gradient specimens were irradiated to characterize their stability with respect to heat transport, lithium transport and physical integrity over the duration of the experiment. Phase I included a solid monolithic specimen of Li_2O while Phase II included a sphere bed of Li_2ZrO_3.

4754 (SAIC–92/1230) **ICRF antenna modeling and simulation: Final report.** Ho, Y.L.; Riyopoulos, S.; Grossmann, W. Science Applications International Corp., San Diego, CA (United States). 7 Dec 1992. 30p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-88ER53270. Order Number DE93004604. Source: OSTI; NTIS; INIS; GPO Dep.

ICH is a central element in all current and planned large tokamak experiments. In addition to its potential role as a primary heating source, ICH is also useful for equilibrium profile control and sawteeth stabilization. Optimization of ICRF antenna performance for either heating or current drive depends critically on the complex balance and interplay between the plasma physics and the electromechanical system requirements. For example, antenna designs and operational modes that minimize impurity production and induced sheath formation may, however, degrade current drive efficiency. Such effects have been observed in experiments involving π versus zero antenna phasing. Solutions to these kinds of technical problems – especially important for a reactor grade antenna where survivability becomes a key issue – require an integration of theory, numerically aided design through modeling and simulation, and experimental investigations. SAIC's efforts in helping to formulate approaches to address the above issues have focussed on two interdependent plasma physics areas: numerical modeling and simulation of ICRF antenna performance including antenna-plasma coupling, and sheath physics in the neighborhood of antennas with emphasis upon Faraday shield and cur-rent strap sheaths. The main goals of our work are to: provide a predictive capability for evaluating antenna performance, including radiated field and power spectral distributions, plasma/antenna coupling, develop an improved understanding of sheath physics phenomenology in the vicinity of ICRF antennas, particularly in the low edge densities where 2-D effects are fundamental, and incorporate the microscopic sheath effects into the macroscopic plasma/antenna performance predictions. These goals have helped SAIC to formulate an approach to the development of a modeling and simulation environment in which the important technical questions affecting ICH can be analyzed and evaluated.

4755 (UCLA/PPG–1323-Vol.1) **The ARIES-I tokamak reactor study: Volume 1, final report.** ARIES Collaborations. California Univ., Los Angeles, CA (United States). Inst. of Plasma and Fusion Research. 1991. 115p. Sponsored by USDOE, Washington, DC (United States). This report discusses the following topics on the Aries-I Tokamak: Design description; systems studies and economics; reactor plasma physics; magnet engineering; fusion-power-ore engineering; and environmental and safety features.

4756 (UCRL-LR–109207) **Low-density foam materials from styrene-divinylbenzene inverse emulsions: Final report.** Cook, R.C.; Overturf, G.E. III; Haendler, B.L.; Kong, Fung-Ming; Letts, S.A. Lawrence Livermore National Lab., CA (United States). 4 Jul 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93002854. Source: OSTI; NTIS; GPO Dep.

This report documents the research and development work conducted by the Materials Research and Production Group of the LLNL ICF Program's Special Projects Group between 1985 and 1989. A foam material composed of heavily cross linked polystyrene-divinylbenzene was prepared from an inverse emulsion of the monomers in water. Final foam densities as low as 25mg/cm^3 were obtained; cell sizes were not greater than 2 to 3 μm. This report documents procedures and characterization of the final material.

4757 (UCRL-LR–110935) **Ultraviolet SO lasers optically pumped by a tunable, line-narrowed KrF laser.** Stuart, B.C.D. Lawrence Livermore National Lab., CA (United States). Jun 1992. 230p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93001624. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to University of California, Davis.

The feasibility of an ultraviolet energy storage laser based on the long-lived sulfur monoxide $A^3\pi$-$\chi^3\Sigma^-$ electronic transition was investigated, and an ultraviolet laser based on the short-lived SO($B^3\Sigma^-$-$\chi^3\Sigma^-$) transition was demonstrated and modeled. Both were optically pumped by a continuously tunable, line-narrowed KrF laser developed for efficient rotationally resolved excitation of SO. SO was produced by both microwave discharge and excimer laser photolysis of the precursor molecules SO_2 and $SOCl_2$, with a maximum SO concentration (10^{16} cm^{-3}) generated by ArF (193 nm) photodissociation of SO_2. Laser induced fluorescence of SO was used to study the excitation spectroscopy, vibrational branching ratios, lifetimes and deactivation rates. The radiative lifetime of SO($A^3\pi_2$,v′ = 5) was measured to be 6.9 μs and that of SO(B,v′ = 1) to be 33 ns. Lifetimes in the highly perturbed SO(B,v′ = 2) level ranged from 28–90 ns. Measurements and modeling of the excitation saturation fluence as a function of buffer gas pressure determined what fraction of the ground state SO(X) molecules could be excited to SO(A) or SO(B). No evidence of excited state absorption was seen. Lasing on six new ultraviolet SO(B-X) vibrational bands in the range 262–315 nm was demonstrated. SO(B-X) pulse energies of up to 11 μJ were obtained and the gain coefficient was estimated to be 0.1 cm^{-1}. A multi-level rate equation model of the SO(B-X) excitation and lasing transitions, including collisional rotational mixing, described the dynamics of the lasing and measured output very well. Modeling showed and experiments confirmed that the maximum possible SO laser gain simply corresponded to saturating the excitation of a single rotational level. Collisional coupling of the rotational levels increased the laser output energy.

99 GENERAL AND MISCELLANEOUS

DOE Contract AC02-76CH00016. (CONF-9205263–1: 17. Suffolk County Science Teachers Association awards, Smithtown, NY (United States), 20 May 1992). Order Number DE93001980. Source: OSTI; NTIS; GPO Dep.

The five fundamental tools for a scientist: (1) technical ability; (2) integrity; (3) initiative and self-motivation; (4) creativity; and, (5) persistence. Examples are given as to why each of these attributes are significant. This report was presented at the banquet for outstanding science awards winner.

4759 (CONF-9209213–1) **Present status and future directions of IRP.** Bauer, D.C. Oak Ridge National Lab., TN (United States). [1992]. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;AC03-76SF00098. From Forecasting and planning process; Kansas City, MO (United States); 22 Sep 1992. Order Number DE92041017. Source: OSTI; NTIS; GPO Dep.

Integrated Resource Planning or IRP is the process by which supply- and demand-side options are consistently planned, implemented, and evaluated to provide energy services at a cost that appropriately balances the interests of all stakeholders. This paper provides a status report on IRP as it is practiced today and then suggests how IRP is transforming itself to pursue new objectives in a changing energy and competitive landscape. The dimensions of

this transformation suggest the immediate "future directions" for IRP. In addition, a final section of our paper pushes through the immediate transformation of IRP within the energy context to speculate about possible application of the IRP principles to other contemporary issues. To establish the basis for this speculation, we posit several defining features that appear to be prerequisites for IRP-type processes to be successful. Some, or even a substantial number of these features may be absent in other settings. Their absence, in turn, should engender caution in those who might otherwise be enthusiastic about the application of "IRP Principles" to other resource allocation issues.

4760 (DOE/ER/75609–T1) **Impact of the FUTURES series: Executive summary.** Research Communications Ltd., Dedham, MA (United States); Foundation for Advancements in Science and Education (FASE), Los Angeles, CA (United States). Apr 1992. 41p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-91ER75609. Order Number DE93004364. Source: OSTI; NTIS; GPO Dep.

The purpose of this study was to evaluate the effectiveness of the FUTURES series in affecting junior high school students' attitudes towards math and careers. FUTURES is a series of 12 programs designed to encourage positive attitudes in students towards math and science. The series illustrates their relevance to a variety of careers. The programs are hosted by Jaime Escalante and targeted to seventh to 12th grade students, with a special focus on minority students. This study looked at the long-term effects of the FUTURES series under classroom conditions. This study was designed to measure the effectiveness of the series in: (1) increasing positive attitudes toward math and science in school; (2) motivating students to have more positive attitudes about their future careers; (3) widening the possible choices of careers that involve the use of math and science; and, (4) creating an understanding of the relevance of math and science to careers and daily life. In addition, this study examined the appeal of the series, the students' understanding of program content, and how the series was used in the classroom.

(GSF - Forschungszentrum fuer Umwelt und Gesundheit GmbH, Neuherberg (Germany). Projekt Information Umwelt); Koller, U.; Assmann, G. GSF - Forschungszentrum fuer Umwelt und Gesundheit GmbH, Neuherberg (Germany). May 1992 144p. (In German). (CONF-9112144–: Press seminar of the GSF Project 'Information Environment', Berlin (Germany), 3-4 Dec 1991). Order Number DE93728679. Source: OSTI; NTIS (US Sales Only); INIS.

'Information on Environment' organised the first part of a seminar for jounalists on the present environmental situation in the now federal states in Berlin on the 3rd and 4th of December. More than 50 participants from radios, TV, daily and special press attended this ninth event of 'Information on Environment' in Berlin. Leading scientists from research institutes of the former GDR, the Federal Environmental Agency and the GSF-research centre for environment and heath gave papers on the predominant environmental problems in the new federal states. This first part deals with water pollution, waste water treatment, drinking water supply, environmental problems of lignite mining, radiation pollution in the Erzgebirge; forest damage research and special armament wastes and waste problems in general. (orig.).

4763 (ORNL/TM–12145) **Technology in education: A guidebook for developing a science and math education support program.** Wagner, C.L. Oak Ridge National Lab., TN (United States). Sep 1992. 122p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93003660. Source: OSTI; NTIS; GPO Dep.

Education is vital to survival and success in an increasingly technical world, and the quality of education is the responsibility of everyone students, teachers, parents, industry, and government. Any technical organization wanting to contribute to that success through its local education system can do so easily and effectively through careful planning. This report details that planning process and includes methods to (1) identify the interests, strengths, and resources of the technical organization; (2) identify the needs of the local education system; (3) interface with local school system administration, principals, and teachers; and (4) develop a unique plan to match the organization's strengths and resources with the needs of the school system. Following these "getting started" activities is the actual program that the Engineering Technology Division implemented in a local elementary school, including the curriculum, topics, and actual lesson plans used by technical personnel in the classroom. Finally, there are enrichment activities for teachers and students, suggestions for measuring the success of an education support program, and an overview of student responses to questions about the overall program.

Aug 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920851–74: Spectrum '92: nuclear and hazardous waste management international topical meeting, Boise, ID (United States), 23-27 Aug 1992). Order Number DE92041331. Source: OSTI; NTIS; GPO Dep.

Assessments of the supply and demand for scientific, engineering, and technical occupations relevant to the Environmental Management (EM) organization were conducted by examining budget projections and the input of managers throughout the DOE complex. Managers feel the complex faces a large percentage increase in the number of individuals who will be employed in environmental restoration and waste management activities over the 1993-1997 timeframe. They do not, however, feel that the skills mix of occupations will change markedly. Selected "niche" occupations will be difficult to staff but training and education options exist to ease shortages.

AEA Technology is the trading name of the United Kingdom Atomic Energy Authority. Work in support of nuclear power at home and abroad continues to be an important part of our business but as nuclear power has matured AEA Technology has looked beyond its traditional role to other markets worldwide. We are a major commercial enterprise, with an annual turnover of Pound 450 million, selling a variety of technical services and products to customers worldwide. The scope of the business lies in the closely related fields of energy, environment and safety, targeted at both nuclear and non-nuclear markets. We also have a major role in providing innovative technology solutions to assist manufacturing industry. The 1990 report on safety within the Authority is presented here. (author).

This document provides a brief, well-illustrated summary of the activities of the International Atomic Energy Agency in the months up to September 1992. Especially mentioned are the programmes to enhance the safety of nuclear power, from the study of nuclear reactors to assessing the radiological consequences of reactor accidents, and the areas of non-proliferation and safeguards.

4772 (ORNL/M–2490) **Overview and phase 1 implementation guidance.** Oak Ridge National Lab., TN (United States). Nov 1992. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;AC05-76OR00001. (CMWG–2). Order Number DE93003888. Source: OSTI; NTIS; GPO Dep.

The facilities, activities, processes, and experiments managed by Martin Marietta Energy Systems, Inc., often involve materials and processes that are hazardous, sensitive, or costly. The risk that may be inherent in these operations is made acceptable by ensuring that they satisfy requirements established by law and regulation, good design, and good operating practices. Configuration management (CM) is an management process intended to ensure that these operations conform to these requirements. The configuration management concept was developed primarily in the aerospace and nuclear power industries in response to events caused when equipment was not kept in the configuration its designers intended. Some of the events resulted in significant environmental disasters. Investigators found that the events were often caused by breakdowns of management controls. These breakdowns allowed improper changes that left equipment unable to perform as required or as documents indicated it would. The configuration management concept was developed to systematically address these breakdowns. Energy Systems and the Department of Energy (DOE) have generally recognized the need for effective configuration management. Health and safety can be better protected; environmental permits, laws, regulations, and orders can be more consistently complied with; and investments in equipment and special programs, such as safety analyses or "as-built" documentation, can be preserved. Configuration management is not a new concept at Energy Systems. Several facilities and processes currently have configuration management programs and practices that benefit safety and quality. Existing procedures (e.g., records management) and programs (e.g., Safety Analysis Report Update Program) provide a basis for successful configuration management in many organizations.

4773 (VTT-TIED–1326) **International survey of living PSA and safety indicators.** Holmberg, J. (Technical Research Centre of Finland, Espoo (Finland). Lab. of Electrical and Automation Engineering); Laakso, K.; Lehtinen, E.; Johansson, G.; Bjoere, S. Technical Research Centre of Finland, Espoo (Finland). Jan 1992. 74p. Order Number DE93608136. Source: OSTI; NTIS; INIS.

The report contains an international overview of applications of living probabilistic assessment and development of operational safety indicators. Features of an ideal living PSA tool are summarized as well as a limited survey of code systems for managing a living probabilistic safety assessment (living PSA) is included. The international survey is used as an input for planning and performance of related tasks within the nordic NKS/SIK-1 project conducted in 1990-93. The research notes are distributed to the Nordic organizations involved or interested in the subject. The report includes an overview and conclusions from technical reports and articles available and presentations and discussions related to development and use of above methods for the evaluation and management of the operational safety of nuclear power plants. A large part of this material is based on material collected and discussed in connection to international specialist meetings relating to the subject.

4774 (ZfK–731) **1989 annual report of the Rossendorf Central Institute of Nuclear Research. Nuclear and Solid-State Physics Section and Accelerator Department of the Large Equipment Section.** Fromm, W.; Kaun, K.H.; Moeller, K.; Naehring, F.; Schulz, H.; Winter, G.; Heidel, I.; Breiter, S. (comps.). Zentralinstitut fuer Kernforschung, Rossendorf (Germany). 1990. 187p. (In German). Order Number DE93728686. Source: OSTI; NTIS (US Sales Only); INIS.

The research and development results are classified by research lines. Each section starts with an introduction summing up the developments of the particular field of work, followed by progress reports on specific projects, contributions on partial results not published so far, and summaries of 1989 publications. Research priorities are, among others, the fields of nuclear spectroscopy; ion-beam solid state physics; positron emission tomography; nuclear trace technology; neutron doping, and accelerator development. (DG).

Problems encountered in implementing the new versions of the computer programs LINEAR, RECENT, SIGMA 1 AND GROUPIE, in the CDC CYBER 170/750 at IEAv, are presented. (author).

4779 (DOE/ER/12810–1) **Variational nodal transport methods for hexagonal and three-dimensional geometries: Final report.** Lewis, E.E. Northwestern Univ., Evanston, IL (United States). Dept. of Mechanical Engineering. Feb 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER12810. Order Number DE93002131. Source: OSTI; NTIS; INIS; GPO Dep.

The properties of the variational nodal method for neutron transport calculations are investigated. The method is generalized for three-dimensional multigroup criticality problems in both hexagonal-z and Cartesian geometries. The method is implemented as part of the Argonne National Laboratory Code DIF3D, and applied to a series of benchmark reactor calculations. Variational nodal methods are compared of nodal transport methods based on both interface-current and discrete ordinate approximations. Model problems are used to examine the effect of running each of the three classes of nodal transport methods on computers with massively parallel architectures.

4780 (DOE/ER/13846–4) **[Mathematical models of hysteresis]: Progress report No. 4, [January 1, 1991–December 31, 1991].** Mayergoyz, I.D. Maryland Univ., College Park, MD (United States). [1991]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER13846. Order Number DE93001836. Source: OSTI; NTIS; GPO Dep.

The research described in this proposal is currently being supported by the US Department of Energy under the contract "Mathematical Models of Hysteresis". Thus, before discussing the proposed research in detail, it is worthwhile to describe and summarize the main results achieved in the course of our work under the above contract. Our ongoing research has largely been focused on the development of mathematical models of hysteretic nonlinearities with "nonlocal memories". The distinct feature of these nonlinearities is that their current states depend on past histories of input variations. It turns out that memories of hysteretic nonlinearities are quite selective. Indeed, experiments show that only some past input extrema leave their marks upon future states of hysteretic nonlinearities. Thus special mathematical tools are needed in order to describe nonlocal selective memories of hysteretic nonlinearities. Our research has been primarily concerned with Preisach-type models of hysteresis. All these models have a common generic feature; they are constructed as superpositions of simplest hysteretic nonlinearities-rectangular loops. Our study has by and large been centered around the following topics: various generalizations and extensions of the classical Preisach model, finding of necessary and sufficient conditions for the representation of actual hysteretic nonlinearities by various Preisach type models, solution of identification problems for these models, numerical implementation and experimental testing of Preisach type models. Although the study of Preisach type models has constituted the main direction of the research, some effort has also been made to establish some interesting connections between these models and such topics as: the critical state model for superconducting hysteresis, the classical Stoner-Wohlfarth model of vector magnetic hysteresis, thermal activation type models for viscosity, magnetostrictive hysteresis and neural networks.

4781 (DOE/ER/25052–T1) **Ultracomputer Research Project: Progress report, January 1, 1992–December 31, 1992.** Gottlieb, A. New York Univ., NY (United States). Courant Inst. of Mathematical Sciences. Society for Industrial and Applied Mathematics (SIAM) conference on optimization, Chicago, IL (United States), 11-13 May 1992). Order Number DE93000781. Source: OSTI; NTIS; GPO Dep.

Abstracts are presented of 63 papers on the following topics: large-scale optimization, interior-point methods, algorithms for optimization, problems in control, network optimization methods, and parallel algorithms for optimization problems.

4783 (DOE/MC/24207–3007) **ISPE: A knowledge-based system for fluidization studies: 1990 Annual report.** Reddy, S. West Virginia Univ., Morgantown, WV (United States). Dept. of Statistics and Computer Science. Jan 1991. 80p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC21-87MC24207. Order Number DE91002087. Source: OSTI; NTIS; GPO Dep.

Chemical engineers use mathematical simulators to design, model, optimize and refine various engineering plants/processes. This procedure requires the following steps: (1) preparation of an input data file according to the format required by the target simulator; (2) excecuting the simulation; and (3) analyzing the results of the simulation to determine if all "specified goals" are satisfied. If the goals are not met, the input data file must be modified and the simulation repeated. This multistep process is continued until satisfactory results are obtained. This research was undertaken to develop a knowledge based system, IPSE (Intelligent Process Simulation Environment), that can enhance the productivity of chemical engineers/modelers by serving as an intelligent assistant to perform a variety tasks related to process simulation. ASPEN, a widely used simulator by the US Department of Energy (DOE) at Morgantown Energy Technology Center (METC) was selected as the target process simulator in the project. IPSE, written in the C language, was developed using a number of knowledge-based programming paradigms: object-oriented knowledge representation that uses inheritance and methods, rulebased inferencing (includes processing

and propagation of probabilistic information) and data-driven programming using demons. It was implemented using the knowledge based environment LASER. The relationship of IPSE with the user, ASPEN, LASER and the C language is shown in Figure 1.

4784 (EGG-CODP–10030(9-92)) **EXCHANGE: Volume 9-92.** Boltz, J.C. (ed.). EG and G Idaho, Inc., Idaho Falls, ID (United States). INEL Supercomputing Center. Sep 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE93001961. Source: OSTI; NTIS; GPO Dep.

EXCHANGE is published monthly by the Idaho National Engineering Laboratory (INEL), a multidisciplinary facility operated for the US Department of Energy (DOE). The purpose of EXCHANGE is to inform computer users about about recent changes and innovations in both the mainframe and personal computer environments and how these changes can affect work being performed at DOE facilities.

4785 (ESTSC–000140IBMPC01) **MEPAS2.3G: Multimedia Environmental Pollutant Assessment System.** Dropo, J.G. Jr. (Pacific Northwest Lab., Richland, WA (United States)); Whelan, G.; Strenge, D.L.; Buck, J.W.; Hoopes, B.L. Battelle-Northwest, Richland, WA (United States). Pacific Northwest Lab. 10 Dec 1992. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Source: ESTSC.

Description: IBM PC; Microsoft DOS (3.n or 5.n); MICROSOFT FORTRAN (75%) DBASE III+ (20%) Microsoft C (5%); 3 3.5 Diskettes. Large applications with many problems should be subdivided into different application directories. Ten to twenty problems per application directory will give good performance. Too many problems will result in delay for data file updates.

Integrated system to compute long-term public health risks as the result of the release of hazardous and/or radioactive materials to air, groundwater, surface water, and overland transport pathways.

4786 (ESTSC–000197IBMPC02) **PCES 2.0: Performance Criteria and Evaluation System.** Jackson, L.L. (Halliburton NUS Environmental Corp., Aiken, SC (United States)). NUS Corp., Aiken, SC (United States). 7 Dec 1992. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-92SR18220. Source: ESTSC.

Description: IBM PC; MS DOS 3.3 or compatible; Clipper Summer '87 (100%); 7 3.5 Diskettes. Due to the size of the data base (6+ MB), PKZIP.EXE and ZIP2EXE.EXE were used to compress the data base. A C routine was written to further split the large file into smaller binary files that will fit on a disk. The DOS copy + /B is used to rejoin the binary files onto the hard drive. This method was chosen to eliminate the limitations of the DOS backup and restore commands. PKZIP and ZIP2EXE were also used for the executable and associated files to minimize the number of diskettes required for distributions of the program.

The Performance Criteria and Evaluation System (PCES) was developed in order to make a data base of criteria accessible to radiation safety staff. The criteria included in the package are applicable to occupational radiation safety at DOE reactor and nonreactor nuclear facilities, but any data base of criteria may be created using the Criterion Data Base Utility (CDU). PCES assists personnel in carrying out oversight, line, and support activities.

4787 (ESTSC–000349IBMPC01) **BETA: Brookhaven Event Tree Analyzer.** Shier, W. (Brookhaven National Lab., Upton, NY (United States)). Brookhaven National Lab., Upton, NY (United States). 1 Jan 1990. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Source: ESTSC.

Description: IBM PC; DOS; ASCII; 1 3.5 Diskette. The source code is not supplied with BETA.

BETA is the Brookhaven Event Tree Analyzer. BETA is used in Probalistic Risk Assessment (PRA). Event trees are key elements in applying PRA in pre-coceptual design for safety enhancement of Oak Ridge National Laboratory's Advanced Neutron Source (ANS) research reactor which will be the world's best source of low-energy neutrons for material studies, physics research, transplutonium production and radiation research.

4788 (ESTSC–000429IPCAT00) **MEOR4D: Measurement of interfacial tension by use of pendant drop video techniques.** Herd, M.D. (EG and G Idaho, Inc., Idaho Falls, ID (United States)); Thomas, C.P.; Bala, G.A.; Lassahn, G.D. EG and G Idaho, Inc., Idaho Falls, ID (United States). 1 Jun 1992. Sponsored by USDOE, Washington, DC (United States). Source: ESTSC.

Description: IBM PC/AT; DOS; C; 1 3.5 diskette.

An instrument and associated software to measure the interfacial tension (IFT) of aqueous surfactant solutions and crude oil. The method involves injection of a drop of fluid (such as crude oil) into a second immiscible phase to determine the IFT between the two phases. The instrument is composed of an AT-class computer, optical cell, illumination, video camera and lens, video frame digitizer board, monitor, and software. The camera displays an image of the pendant drop on the monitor, which is then processed by the frame digitizer board and non-proprietary software to determine the IFT. Several binary and ternary phase systems were taken from the literature and used to measure the precision and accuracy of the instrument in determining IFTs.

4789 (ESTSC–000536IBMPC00) **LIMENU: Menu driven program determining properties of aqueous lithium bromide solutions.** Patterson, M.R. (Oak Ridge National Lab., TN (United States)); Crosswhite, R.N.; Perez-Blanco, H. Oak Ridge National Lab., TN (United States). 1 Jan 1990. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Source: ESTSC.

Description: IBM PC; DOS; FORTRAN; 1 5.25 Diskette.

LIMENU is a menu driven program written to compute seven physical properties of a lithium bromide-water solution and three physical properties of water, and to display two plots.

4790 (ESTSC–000538I036000) **PRODCOST: Utility generating cost simulation.** Hudson, C.R.II (Oak Ridge National Lab., TN (United States)); Reynolds, T.M.; Smolen, G.R. Oak Ridge National Lab., TN (United States). 1 Feb 1981. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-26. (NESC–960). Source: ESTSC.

Description: IBM360; OS/370; FORTRAN IV (97%) and Assembler (3%); 1 Mag Tape.

PRODCOST simulates the operation of an electric utility generation system. Through a probabilistic simulation the expected energy production, fuel consumption, and cost of operation for each unit in the system are determined. Total system fuel consumption, energy generation by type, total generation costs, as well as system loss of load probability and expected unserved energy are calculated. The code does not take into account the transmission and distribution system of the utility. It assumes that there are no transmission limitations within the system. Finite energy exchanges with neighboring utilities can be modeled.

4791 (ESTSC–000539I036000) **VENTURE: 1, 2, or 3-d multigroup diffusion.** Vondy, D.R. (Oak Ridge National Lab., TN (United States)); Fowler, T.B.; Cunningham, G.W. Oak Ridge National Lab., TN (United States). 1 Apr 1979. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. (NESC–686). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM360; OS/360; FORTRAN IV and Assembly language; 1 Mag Tape. Programming is in the Standard ANSI FORTRAN 1966 language except for extensions as required for unindexed block data transfers and direct access. Arrays are limited to 3 dimensions, subroutines to 60 arguments, and no use is made of subscripted subscripts. Standard routines developed in the ERDA Reactor Physics code coordination effort are employed for processing input data and data file management. Local system environment routines for computing elapsed time, allocating memory, and setting up direct access file specifications dynamically will require replacement.

VENTURE solves the usual neutronics eigenvalue, adjoint, fixed source, and criticality search (direct and indirect) problems, treating up to three geometric dimensions, maps power density and does first-order perturbation analysis at the macroscopic cross section level.

4792 (ESTSC–000540CY00100) **TART: Coupled neutron & photon MC transport.** Plechaty, E.F. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 4 Jul 1976. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (NESC–9574). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: CRAY1; CTSS; LRLTRAN; 1 Mag Tape.

TART is a three-dimensional, data-dependent Monte Carlo transport program. The program calculates the transport of neutrons, photons, and neutron-induced photons through zones described by algebraic functions. The zones and elements to be included are user-specified. Any one of 21 different output tallys (methods of calculating particle transport) may be selected for each zone. A spectral reflection tally, which calculates reflections from planes and quadratic surfaces, saves considerable time and effort for some classes of problems. The neutron and photon energy deposition output tally is included in all TART calculations. The neutron and gamma-ray production cross sections are specified from 10E-9 MeV to 20 MeV. The gamma-ray interaction cross sections are specified from 10E-4 MeV to 30 MeV. The three cross section libraries are provided in binary form. Variance reduction methods included are splitting and Russian roulette at zone boundaries. Each zone in the problem can be assigned a weight.

4793 (ESTSC–000541C660000) **TOR: Thermal scattering crystalline materials.** Clendenin, W.W. (Los Alamos National Lab., NM (United States)); Labauve, R. Los Alamos National Lab., NM (United States). 1 Oct 1969. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (NESC–360). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: CDC6600; SCOPE; FORTRAN IV; 1 Mag Tape. Logical tape 10 is input, logical tape 9 is output, logical tape 11 is punch.

The TOR program calculates the scattering law for a crystalline material in the incoherent approximation, from the phonon frequency distribution and a specified temperature. A proportional quantity is punched in the form of a table for interpolation of the double differential cross section. As an alternative, the program obtains the analogous quantities for a monatomic gas.

4794 (ESTSC–000542H600000) **TRIAL: 3-d reaction rates from 2-d flux sets.** Cowan, C.L. (General Electric Co., Sunnyvale, CA (United States)). General Electric Co., Sunnyvale, CA (United States). Advanced Technology Dept. 1 Mar 1973. Sponsored by USDOE, Washington, DC (United States). (NESC–585). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: HONEYWELL 6000; GCOS6000; FORTRAN IV; 1 Mag Tape. All input flux sets and the output 3-D flux set are prescribed in the format of the standard interface file, as recommended by the Standard Interface File Subcommittee of the Computer Code Coordination Committee (see reference 2).

TRIAL carries out a simple linking of several two-dimensional, multigroup neutron (direct or adjoint) flux sets to give a three-dimensional representation.

4795 (ESTSC–000543I036000) **U3R: Unresol resonance xsec probability tables.** Otter, J.M. (Rockwell International, Canoga Park, CA (United States)); Lewis, R.C.; Levitt, L.B. Rockwell International Corp., Canoga Park, CA (United States). Rocketdyne Div. 31 Jul 1972. Sponsored by USDOE, Washington, DC (United States). (NESC–553). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM360; OS/360; FORTRAN IV, Assembly language random number generator; 1 Mag Tape.

U3R numerically constructs a table of the cumulative probability distribution functions of unresolved resonance cross sections in a narrow energy range.

4796 (ESTSC–000544C760000) **LPMGB: Linear programming subroutine w/bounds.** Hanson, R.J. (Sandia National Labs., Albuquerque, NM (United States)); Wisniewski, J.A. Sandia National Labs., Albuquerque, NM (United States). 1 Aug 1979. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (NESC–913). Source: ESTSC.

Description: CDC7600; SCOPE 2.1 (CDC7600); NOS 1.3 (CD-FORTRAN; 1 Mag Tape. The FLECS structured-FORTRAN preprocessor was used to produce the LPMGB source, which is written to be readily transportable to a variety of computers. To implement LPMGB on other than CDC or IBM machines, the environmental parameters in function I1MACH should be modified as described in the introductory comments of that routine.

LPMGB minimizes a linear function of several variables subject to linear equality constraints with bounds on selected variables.

4797 (ESTSC–000544I037000) **LPMGB: Linear programming subroutine w/bounds.** Hanson, R.J. (Sandia National Labs., Albuquerque, NM (United States)); Wisniewski, J.A. Description: IBM370; OS/370; FORTRAN; 1 Mag Tape. The FLECS structured-FORTRAN preprocessor was used to produce the LPMGB source, which is written to be readily transportable to a variety of computers. To implement LPMGB on other than CDC or IBM machines, the environmental parameters in function I1MACH should be modified as described in the introductory comments of that routine.

LPMGB minimizes a linear function of several variables subject to linear equality constraints with bounds on selected variables.

4798 (FNAL/C–92/163) **CPS and the Fermilab farms.** Fausey, M.R. Fermi National Accelerator Lab., Batavia, IL (United States). Jun 1992. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-930117–3: 26. Hawaiian international conference on system science: biotechnology computing track, Kauai, HI (United States), 5-8 Jan 1993). Order Number DE92018311. Source: OSTI; NTIS; INIS; GPO Dep.

Cooperative Processes Software (CPS) is a parallel programming toolkit developed at the Fermi National Accelerator Laboratory. It is the most recent product in an evolution of systems aimed at finding a cost-effective solution to the enormous computing requirements in experimental high energy physics. Parallel programs written with CPS are large-grained, which means that the parallelism occurs at the subroutine level, rather than at the traditional single line of code level. This fits the requirements of high energy physics applications, such as event reconstruction, or detector simulations, quite well. It also satisfies the requirements of applications in many other fields. One example is in the pharmaceutical industry. In the field of computational chemistry, the process of drug design may be accelerated with this approach. CPS programs run as a collection of processes distributed over many computers. CPS currently supports a mixture of heterogeneous UNIX-based workstations which communicate over networks with TCP/IR CPS is most suited for jobs with relatively low I/O requirements compared to CPU. The CPS toolkit supports message passing remote subroutine calls, process synchronization, bulk data transfers, and a mechanism called process queues, by which one process can find another which has reached a particular state. The CPS software supports both batch processing and computer center operations. The system is currently running in production mode on two farms of processors at Fermilab. One farm consists of approximately 90 IBM RS/6000 model 320 workstations, and the other has 85 Silicon Graphics 4D/35 workstations. This paper first briefly describes the history of parallel processing at Fermilab which lead to the development of CPS. Then the CPS software and the CPS Batch queueing system are described. Finally, the experiences of using CPS in production on the Fermilab processor farms are described.

4799 (IAEA-TECDOC–660) **Expert systems in the nuclear industry: Report of a technical committee meeting/workshop held in Springfields, United Kingdom, 30 September - 4 October 1991.** International Atomic Energy Agency, Vienna (Austria). Jul 1992. 219p. (CONF-9109435–: Technical committee meeting/workshop on demonstration and review of expert system prototypes, Springfields (United Kingdom), 30 Sep - 4 oct 1991). Order Number DE93606682. Source: OSTI; NTIS (US Sales Only); INIS.

Recent developments in expert system technology have led to the question whether such systems could be used for the enhancement of nuclear safety, particularly as advisory system during abnormal plant conditions. This document was produced during the Technical Committee Meeting (TCM) to Demonstrate and Review Expert System Prototypes, which was organized jointly by the International Atomic Energy Agency and British Nuclear Fuels Ltd (BNFL) and held at the BNFL site in Springfields, United Kingdom, from 30 September to 4 October 1991. A separate abstract was prepared for each of the 14 papers in this document. Refs, figs and tabs.

4800 (IAEA-TECDOC–660, pp. 71-88) **Real-time knowledge-based supervision and fault diagnosis for industrial applications using COGSYS.** Davison, S.J. Source: OSTI; NTIS (US Sales Only); INIS.

This paper describes the development and application of a new real-time expert system called COGSYS. COGSYS was developed through a collaborative project involving 35 major European companies. The project began life in 1987 following on from the successful completion of an earlier real-time expert system project called RESCU (Real-time Expert System Club of Users), which was a similar collaborative project funded under the Government's Alvey initiative. As an awareness project RESCU allowed the club members to gain sufficient insight into the potential benefits through its application to a detergent manufacturing plant at ICI Wilton to justify a further project aimed at the commercialisation of the system. The COGSYS project lasted 3 years and culminated with demonstration at 2 test-sites, British Gas in Solihull and CMB Technology in Wantage. The British Gas application involved a decision support system for a gas production plant and the CMB application is based on quality control of a laminated plastic bottle making process. COGSYS is now being marketed by a company of the same name, set up by the British Gas, SD-Scicon and Salford University Business Enterprises. (author). 8 refs.

PERFECT (Programming EnviRonment For Expertsystems Constrained in reasoning Time) aims at supporting knowledge engineers during the development of real-time knowledge based systems (RTKBS). It provides support at the knowledge level (Newell 1981) in offering guidance in modeling complex industrial processes, and in supplying ways to use this knowledge model during problem solving. A generic modeling technique for RTKBS is described. A part from support in modelling, PERFECT also provides support at the level of (real-time) software engineering by means of an analyzer that predicts the response-time of the knowledge model at run-time when using the model for diagnosis of disturbance. In case the response-time is not as required, the analyzer proposes an alternative structure for the knowledge model and checks whether the resulting knowledge model is observable. (author). 18 refs, 10 figs.

International Atomic Energy Agency, Vienna (Austria). Jul 1992. (CONF-9109435–: Technical committee meeting/workshop on demonstration and review of expert system prototypes, Springfields (United Kingdom), 30 Sep - 4 oct 1991). In *Expert systems in the nuclear industry: Report of a technical committee meeting/workshop held in Springfields, United Kingdom, 30 September - 4 October 1991.* 219p. Order Number DE93606682. Source: OSTI; NTIS (US Sales Only); INIS.

This paper describes the work of the British Nuclear Fuels plc (BNFL) Expert Systems Team. It covers the background to Expert Systems within BNFL, the method for developing off-line Expert Systems, applications within BNFL and future developments affecting off-line Expert Systems. (author).

4803 (IAEA-TECDOC–660, pp. 103-109) **AI-techniques in plant operation and in the design of plant automatics.** Vaelisuo, H. (Technical Research Centre of Finland, Espoo (Finland). Lab. of Electrical and Automation Engineering). International Atomic Energy Agency, Vienna (Austria). Jul 1992. (CONF-9109435–: Technical committee meeting/workshop on demonstration and review of expert system prototypes, Springfields (United Kingdom), 30 Sep 1991). In *Expert systems in the nuclear industry: Report of a technical committee meeting/workshop held in Springfields, United Kingdom, 30 September - 4 October 1991.* 219p. Order Number DE93606682. Source: OSTI; NTIS (US Sales Only); INIS.

The role of AI-techniques in the implementation of computerised operator support systems is discussed. It is suggested that similar problems are encountered in control system design. Solving various plant control problems is considered as the dominant task. Different techniques to solve control problems and the knowledge they require are reviewed. It is pointed out that knowledge base need not be a set of rules on how to solve the problems is a given domain. The knowledge base may also be a (qualitative) description of the problem domain (e.g. a power plant). Finally a research project addressing the problem of computerized operator support systems is sketched. (author). 3 refs, 3 figs.

4804 (IEN-DERE-DIMEC–06/85) **Computer program verification project C.E.E. - Benchmark problems - step 1.** Jospin, R.J.; Correia Filho, A.; Goncalves Filho, O.J.A. Instituto de Engenharia Nuclear (IEN), Rio de Janeiro, RJ (Brazil). Div. de Mecanica Estrutural. Aug 1985. 66p. Order Number DE93608125. Source: OSTI; NTIS (US Sales Only); INIS.

This report presents the numerical solutions obtained, through the finite element method, for three benchmark problems involving different types of material nonlinear behaviour of a clamped circular plate subject to an uniform distributed load. This work represents the initial participation of the Division of Structural Mechanics/IEN in the Computer Program Verification Project developed by the European Economic Communities. (author).

4805 (IRD-CNEN-NT–010/87) **A multi-channel microcomputer data acquisition system.** Loureiro, J.S. Instituto de Radioprotecao e Dosimetria (IRD), Rio de Janeiro, RJ (Brazil). 1987. 16p. (In Portuguese). Order Number DE93608126. Source: OSTI; NTIS (US Sales Only); INIS.

A data acquisition system was developed in order to transfer automatically to a 64 kb microcomputer the data generated by a nuclear spectroscopy system in a multichannel analyser. The data in the memory are stored in a floppy disk and will be further used as data entry for any spectrum analysis program, eliminating the tedious work of manually digitizing the spectrum and the possible mistakes associated with it. The developed system connected a POLYMAX 201 DP microcomputer, under CP/M operational system, to a NUCLEAR DATA MODEL ND-65 multichannel analyser and was planned for either local spectrum analysis in the microcomputer using a simplified program, or remote analysis in a mainframe using the sophisticated analysis program SAMPO. With the present system, the time spent between printing out of the 4096 channels with the multichannel analyser printer and its corresponding introduction in the analysis program has been reduced from about 6 hours to less than 2 minutes. (author).

4806 (KFK–5001) **Visualization in complex systems and its application in environmental protection.** Denzer, R. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Datenverarbeitung in der Technik; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Schadstoff- und Abfallarme

Verfahren (PSA); Kaiserslautern Univ. (Germany). Fachbereich Informatik. Apr 1992. 148p. (In German). Order Number DE93728985. Source: OSTI; NTIS (US Sales Only).

Especially for environmental information systems there is a new quality in the design of end user dialogues. The data needed at a workplace may be distributed over a large network, where it is not always obvious where the data may be found. The computer network itself is a complex system which operates on the data of the complex system "environment". The visualization of the complex system "environment" therefore is some kind of visualization within a complex system. A new architecture for graphical user interfaces is presented. The architecture shows a conceptual framework for the design of flexible end user interfaces for complex systems. The architecture is based on a new communication concept for open distributed systems which is capable to integrate remote data very easily into the user interface. The communication concept is a general one and therefore not limited to user interface implementation. The second main concept is the integration of representation and application components in opposition to the Seeheim model. This is called integrated modeling. The implementation of the user interface is done using a combination of object orientation and rule based methods. (orig./BBR).

4807 (LA–11990-C) **Workshop on online documentation in the supercomputing environment.** Caldwell, G. (National Center for Atmospheric Research, Boulder, CO (United States)); Rew, J. (comps.); Cohen, M.; Solem, A. (comps.). Los Alamos National Lab., NM (United States); National Center for Atmospheric Research, Boulder, CO (United States). Dec 1990. 171p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract W-7405-ENG-36. (NCAR/TN–353;CONF-9004367–Summs.: Workshop on online documentation in the supercomputing environment, Colorado Springs, CO (United States), 3-6 Apr 1990). Order Number DE92040949. Source: OSTI; NTIS; GPO Dep.

Many people are interested in online user documentation for supercomputers and the continuing problems that plague us: problems of delivering online information in a heterogeneous computing environment that includes supercomputers and workstations, and lack of vendor solutions that work in diverse computing environments for diverse types of documentation. These problems have made it difficult to develop online documentation systems that have proved to be broadly effective. With changing technology and supercomputing environments, we believe the time is right to make substantial progress in this field. It was in this context that the National Center for Atmospheric Research and Los Alamos National Laboratory organized the Workshop on Online Documentation in the Supercomputing Environment in Colorado Springs, April 3–6, 1990. Twenty-eight participants came from leading supercomputing sites, including the national laboratories, National Institute of Standards and Technology, the National Science Foundation supercomputing centers, university and regional supercomputing centers and Cray Research and IBM. As a group representing twelve diverse supercomputing centers, participants in the workshop saw a need for a common online documentation system that could serve a heterogeneous distributed computing environment. We also desired the efficiency to be gained of sharing documentation in machine-readable form among hardware and software vendors as well as between supercomputing centers. We did not see any currently existing software products meeting all of these needs. We thus believed we needed to establish a forum to advocate the development or evolution of a suitable online documentation system. We hope that this workshop has resulted in increased understanding and will have served as another step toward the development of online documentation for supercomputer users.

4808 (LA-UR–92-2511) **An algebraic foundation for FORTRAN 90 communication intrinsics.** Stiller, L. (Los Alamos National Lab., NM (United States)). Los Alamos National Lab., NM (United States). [1992]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-930129–1: Working conference on architecture and compilation techniques for fine and medium grain parallelism, Orlando, FL (United States), 20-22 Jan 1993). Order Number DE92040393. Source: OSTI; NTIS; GPO Dep.

This paper proposes linear algebra and multilinear algebra as a foundation for the implementation and the understanding of several fundamental parallel communication operations. We will analyze three representative operations: the FORTRAN 90 intrinsic SPREAD, the FORTRAN 90 intrinsic SUM and the parallel prefix operator SCAN. By formulating the operations as linear transformations, we hope to be able to apply linear algebraic techniques to reorder and to factor both these transformations and higher level user functions that call these primitives. Several applications of this technique will be discussed. Perhaps the most surprising was simple code that sped up the SPREAD intrinsic on the CM-200 by a factor of up to 6 and the SUM intrinsic by a factor of up to 20. This speedup had immediate and dramatic impact on many parallel programs. The SUM intrinsic was also sped up on the CM-5.

4809 (LA-UR–92-2972) **Statistical error in a chord estimator of correlation dimension: The "rule of five".** Theiler, J. (Los Alamos National Lab., NM (United States)); Lookman, T. Los Alamos National Lab., NM (United States). 1 Sep 1992. 14p. Sponsored by USDOE, Washington, DC (United States); Department of Health and Human Services, Washington, DC (United States). DOE Contract W-7405-ENG-36. Grant 1-R01-MH47184-01. (CONF-9208161–1: 2. bifurcations and chaos workshop on dynamical measures of complexity and chaos, Bryn Mawr, PA (United States), 13-15 Aug 1992). Order Number DE93000687. Source: OSTI; NTIS; INIS; GPO Dep.

The statistical precision of a chord method for estimating dimension from a correlation integral is derived. The optimal chord length is determined, and a comparison is made to other estimators. The simple chord estimator is only 25% less precise than the optimal estimator which uses the full resolution and full range of the correlation integral. The analytic calculations are based on the hypothesis that all pairwise distances between the points in the embedding space are statistically independent. The adequacy of this approximation is assessed numerically, and a surprising result is observed in which dimension estimators can be anomalously precise for sets with reasonably uniform (nonfractal) distributions.

4810 (LA-UR–92-3200) **From the rotation group to the Poincare group.** Louck, J.D. Los Alamos National Lab., NM (United States). [1992]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9208164–1: 6. symmetries in science, Bregenz (Austria), 2-7 Aug 1992). Order Number DE93000864. Source: OSTI; NTIS; GPO Dep.

Larry Biedenham is, perhaps, best known for his penetrating insights into the relevance of abstract mathematics for the structure of physical theory and his ability to implement this mathematics in a style comprehensible to physicists. This is well-illustrated by his many recent contributions to q-algebras. He has also written numerous papers concerned with the pedagogy of physical theory – papers with the purpose of clarifying the content and meaning of a subject. It is in the spirit of these latter contributions that the present paper is presented. The subject is the quantum rotation group, SU(2), the group of 2×2 unitary unimodular matrices, and its fundamental role in physical theory. The fact that the irreducible representations (irreps) of the group SU(2) can be realized by unitary transformation of state vectors whose domain of definition is the usual Euclidean 3-space, R^3, is usually obscured by the fact that one is accustomed to thinking of the underlying group of transformations on R^3 the group SO(3,R) of proper orthogonal matrices. We show in the first part of this paper how one can formulate the usual "orbital angular momentum theory" from the viewpoint of SU(2) alone. The motivation for this approach is to eliminate from the language of quantum mechanics the ambiguities arising from the highly unsatisfactory notion of "double-valued functions." In the second part of the paper, we show how the irreps of SU(2), extended to GL(2,C), enter into the description of the unitary irreps of the Poincare group. We emphasize again the uniform role of SU(2), in contrast to SO(3,R), and point out the several ways that the standard irreps of SU(2) occur. In the third part of the paper, we discuss the parametrization of SL(2,C) in terms of biquaternions and mention the problem of determining the discrete subgroups of SL(2,C).

4811 (LA-UR–92-3214) **NADIR: A prototype system for detecting network and file system abuse.** Hochberg, J.G.; Jackson, K.A.; Stallings, C.A.; McClary, J.F.; DuBois, D.H.; Ford, J.R. Los Alamos National Lab., NM (United States). [1992]. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9211108–1: 7. European conference on information systems security, audit, and control, Brussels (Belgium), 16-18 Nov 1992). Order Number DE93000861. Source: OSTI; NTIS; GPO Dep.

This paper describes the design of a prototype computer misuse detection system for the Los Alamos Notional Laboratory's Integrated Computing Network (ICN). This automated expert system, the Network Anomaly Detection and Intrusion Reporter (NADIR), streamlines and supplements the manual audit record review traditionally performed by security auditors. NADIR compares network activity, as summarized in weekly profiles of individual users and the ICN as a whole, against expert rules that define security policy, improper or suspicious behavior, and normal user activity. NADIR reports suspicious behavior to security auditors and provides tools to aid in follow-up investigations. This paper describes analysis by NADIR of two types of ICN activity: user authentication and access control, and mass file storage. It highlights system design issues of data handling, exploiting existing auditing systems, and performing audit analysis at the network level.

4812 (LUTFD2-TFRT–5440-1-100-1991) **Are expert systems needed on the power exchange?.** Nilsson, David. Lund Univ. (Sweden). Dept. of Automatic Control. Sep 1991. 100p. (In Swedish). Order Number DE93608127. Source: OSTI; NTIS; INIS.

Examination paper.

The goal of this masters thesis is to investigate whether it is possible to improve the activities at the power production unit (PDP) at Sydkraft with the help of expert systems. Another goal is that the produced result should work as an education material for the production operators. Therefore the work contains a detailed description of the power exchange and the factors that influence it, in addition to a description of the work tasks of the operators. The conclusions are, first, that an embedded critiquing system would enable a quicker training of new operators, while also giving the more experienced operators feedback on their decisions. Secondly, the water storage operation should be documented, to create a basis for the development of an expert system, and to create more material for education. The thesis also suggests a new model for the development of expert systems in areas where it is not known whether such a solution is possible. (au).

4813 (ORNL/TM–12167) **Overdispersion: Notes on discrete distributions.** Bowman, K.O. (Oak Ridge National Lab., TN (United States)); Shenton, L.R.; Kastenbaum, M.A.; Broman, K. Oak Ridge National Lab., TN (United States). Sep 1992. 91p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93003674. Source: OSTI; NTIS; GPO Dep.

We introduce mixtures of binomial distributions derived by assuming that the probability parameter p varies according to some law. We use the transformation $p = \exp(-t)$ and consider various appropriate densities for the transformed variables. In the process, the Laplace transform becomes the fundamental entity. Large numbers of new binomial mixtures are generated in this way. Some transformations may involve several variates that lead to "multivariate" binomial mixtures. An extension of this to the logarithmic distribution, with parameter p, is possible. Frullani integrals and Laplace transforms are encountered. Graphical representations of some of the more significant distributions are given. These include probability functions, regions of validity, and three dimensional representations of probability functions showing the response to variation of parameters when two parameters are involved.

4814 Packet-switched intercommunication network for distributed memory, parallel processor computers. Napolitano, L.M. Jr. To Dept. of Energy. 1990. Filed date 26 Feb 1990. USAA patent application 7-660,50. 44p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93002002. Source: OSTI; NTIS; GPO Dep.

The Lambda network is a single stage, packet-switched interprocessor communication network for a distributed memory, parallel processor computer. Its design arises from the desired network characteristics of minimizing mean and maximum packet transfer time, local routing, expandability, deadlock avoidance, and fault tolerance. The network is based on fixed degree nodes and has $O(\log_{2n})$ mean and maximum packet transfer distances where n is the number of processors. The routing method is detailed, as are methods for expandability, deadlock avoidance, and fault tolerance.

4815 (PNL-SA–21186) **Planning and managing distributed computing resources.** Fox, J.C. Pacific Northwest Lab., Richland, WA (United States). Aug 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920895–1: 33. Association for Energy Systems, Operations, and Programming conference, Oak Ridge, TN (United States), 18-20 Aug 1992). Order Number DE93001513. Source: OSTI; NTIS; GPO Dep.

This paper explains the approach that the Pacific Northwest Laboratory is taking to address the planning and management issues raised by the distribution of computing resources throughout the organization. The issues are outlined, the annual planning and management process is described, and its effectiveness in addressing the issues is assessed.

4816 (SAND–92-1063C) **A different view of the fault tree forest.** Daniel, S.L.; Kunsman, D.M. Sandia National Labs., Albuquerque, NM (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-930116–7: Probabilistic safety assessment international topical meeting, Clearwater Beach, FL (United States), 27-29 Jan 1993). Order Number DE93002472. Source: OSTI; NTIS; GPO Dep.

A different approach to obtaining an exact solution to a complex fault tree is presented. The fault tree is complex because it contains a large number of AND gates and many high-order multiple output gates.

4817 (SAND–92-7281) **PC software overview.** Fox, E.T. (EG and G Energy Measurements, Inc., Albuquerque, NM (United States)); Kissock, P.S. Sandia National Labs., Albuquerque, NM (United States); EG and G Energy Measurements, Inc., Albuquerque, NM (United States). Oct 1992. 68p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93003228. Source: OSTI; NTIS; GPO Dep.

The laptop PC is used by the Annunciator maintenance personnel to generate the site configuration and the sunrise/sunset times data files, to upload software files and data files to the host computer, to download the historical log file from the host, to maintain the historical log database, and to generate reports. This manual describes the organization and functionality of the software as well as generation mechanisms for development and target environments.

4818 (SAND–92-8625) **Teaching polymers to fold.** Judson, R.S. Sandia National Labs., Livermore, CA (United States). Oct 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93002670. Source: OSTI; NTIS; GPO Dep.

A new method is presented for predicting folding pathways of polymers. The folding pathway is described as a generic program or sequence of logical steps of such a form that a computer can carry them out to produce a folded structure. A Genetic Algorithm (GA) is used to learn specific sequences or folding pathways that carry a denatured conformation into a target final conformation. The method is demonstrated on a model 2-dimensional polymer for which the global energy minimum is known. The GA learns a program that will fold a denatured polymer into its global energy minimum conformation.

4819 (SOL–92-6) **Bracketing to speed convergence illustrated on the von Newmann algorithm for finding a feasible solution to a linear program with a convexity contraint: Technical report.** Dantzig, G.B. Stanford Univ., CA (United States).

Systems Optimization Lab. Oct 1992. 12p. Sponsored by USDOE, Washington, DC (United States); Electric Power Research Inst., Palo Alto, CA (United States); National Science Foundation, Washington, DC (United States). DOE Contract FG03-92ER25116. Grant DMS-8913089;Grant RP8010-09. Order Number DE93002660. Source: OSTI; NTIS; GPO Dep.

Analogous to gunners firing trial shots to bracket a target in order to adjust direction and distance, we demonstate that it is sometimes faster not to apply an algorithm directly, but to roughly approximately solve several perturbations of the problem and then combine these rough approximations to get an exact solution. To find a feasible solution to an m-equation linear program with a convexity constraint, the von Neumann Algorithm generates a sequence of approximate solutions which converge very slowly to the right hand side b^0. However, it can be redirected so that in the first few iterations it is guaranteed to move rapidly towards the neighborhood of one of m + 1 perturbed right hand sides $\hat{b}^i$, then redirected in turn to the next $\hat{b}^i$. Once within the neighborhood of each $\hat{b}^i$, a weighted sum of the approximate solutions. $\bar{x}^i$ yields the exact solution of the unperturbed problem where the weights are found by solving a system of m + 1 equations in m + 1 unknowns. It is assumed an $r > 0$ is given for which the problem is feasible for all right hand sides b whose distance $||b - b^0||_2 \leq r$. The feasible solution is found in less than $4(m+ 1)^3/r^2$ iterations. The work per iteration is $\delta mn + 2m + n + 9$ multiplications plus $\delta mn + m + n + 9$ additions or comparisons where δ is the density of nonzero coeffients in the matrix.

4820 (SSCL-Preprint–8-Rev.A) **Discovering graphics in LATEX documents: Preprint 8, Revision A.** Damrau, J. Superconducting Super Collider Lab., Dallas, TX (United States). Jul 1992. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. (CONF-9207164–1-Rev.A: 13. annual TEX users group meeting, Portland, OR (United States), 27-30 Jul 1992). Order Number DE93003318. Source: OSTI; NTIS; INIS; GPO Dep.

This paper attempts to share all information obtained in researching the graphics inclusion in LATEX, from using the picture environment to using EPS graphics, briefly discussing how graphics enter user documents, the graphics packages available to accomplish graphics inclusion, and the various uses of the \special command for the SSCL printers.

4821 (UCRL-CR–111574) **DIDS site selection.** Heberlein, T. (Haystack Labs., Inc., Austin, TX (United States)); Pon, K. Lawrence Livermore National Lab., CA (United States); California Univ., Davis, CA (United States); Haystack Labs., Inc., Austin, TX (United States). Oct 1990. 4p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-48. (DIDS–91-01). Order Number DE93001610. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This document specifies the target system to be monitored by the prototype Distributed Intrusion Detection System (DIDS). The first part of this document summarizes information obtained through site visits to two US Air Force (USAF) computer facilities. The next section discusses the target system selected for the DIDS prototype and details the reasoning behind the selection.

4822 (UCRL-CR–111575) **DIDS preliminary design.** Smaha, S. (Haystack Labs., Inc., Austin, TX (United States)). Lawrence Livermore National Lab., CA (United States); California Univ., Davis, CA (United States). Div. of Computer Science; Haystack Labs., Inc., Austin, TX (United States). Dec 1990. 35p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-48. (DIDS–91-02). Order Number DE93001611. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This report is submitted in partial fulfillment of the requirements of work performed for the US Air Force Cryptologic Support Center, San Antonio, Texas. It outlines in detail, the preliminary design of the Distributed Intrusion Detection System (DIDS). DIDS is a software system residing on heterogeneous host computers and on a dedicated hardware platform. These entities interact via local area network to detect intrusive behavior on the host computers.

4823 (UCRL-CR–111576) **DIDS evaluation criteria and technical issues.** Brentano, J. (California Univ., Davis, CA (United States)). Lawrence Livermore National Lab., CA (United States); California Univ., Davis, CA (United States); Haystack Labs., Inc., Austin, TX (United States). Dec 1990. 53p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-48. (DIDS–91-03). Order Number DE93001613. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This report is submitted in partial fulfillment of the requirements of work performed for the US Air Force Cryptologic Support Center, San Antonio, Texas. It describes the technical issues involved in the design of the Distributed Intrusion Detection System (DIDS) and compares these issues vis-a-vis their implementation in DIDS versus several other intrusion detection systems. Issues include: host monitoring and audits; network monitoring, aggregation of audit information; implementation of an attack model; and applications of expert system technology to intrusion detection. This document is excerpted from the author's Master of Science thesis in computer Science, submitted to the University of California at Davis.

4824 (UCRL-ID–111966) **1-D slab solidification TOPAZ2D comparison to analytical solution.** Smith, J. Lawrence Livermore National Lab., CA (United States). Oct 1992. 40p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93003337. Source: OSTI; NTIS; GPO Dep.

The objective of this project was to compare the numerical simulation of a 1-D slab solidification problem to the analytical solution found in Carslaw and Jaeger (1980), using absolute error as the basis of comparison. Three time steps, four element densities and two methods of accounting for latent heat produced a total of twenty-four data sets.

4825 (UCRL-JC–109361) **Complexity optimized vector quantization: A neural network approach.** Buhmann, J. (Lawrence Livermore National Lab., CA (United States)); Kuehnel, H. Lawrence Livermore National Lab., CA (United States). 31 Jan 1992. 12p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States); German Federal Ministry of Science and Technology (Germany). DOE Contract W-7405-ENG-48. Grant ITR-8800-H1;Grant 88-0274. (CONF-9203200–1: Data compression conference, Snowbird, UT (United States), 24-26 Mar 1992). Order Number DE93001304. Source: OSTI; NTIS; GPO Dep.

We discuss a vector quantization strategy which jointly optimizes distortion errors and complexity costs. A maximum entropy estimation of the vector quantization cost function yields an optimal codebook size, the reference vectors and the assignment frequencies. We compare different complexity measures for the design of image compression algorithms which quantize wavelet decomposed images. An online version of complexity optimized vector quantization is implemented by an artificial neural network with winner-take-all connectivity. Our approach establishes unifying framework for different quantization methods like K-means clustering and its fuzzy version, entropy constrainted vector quantization or self-organizing topological maps and competitive neural networks.

4826 (UCRL-JC–111428) **PDDP: A parallel data distribution preprocessor.** Warren, K.H. Lawrence Livermore National Lab., CA (United States). Jul 1992. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-930117–4: 26. Hawaiian international conference on system science: biotechnology computing track, Kauai, HI (United States), 5-8 Jan 1993). Order Number DE92040400. Source: OSTI; NTIS; GPO Dep.

The current goal of the computer hardware industry is to produce computers featuring hundreds, even thousands of processors, that achieve Teraflop results. When such a massive number of processors are used, data proximity becomes a key concern. Existing mature software will not produce Teraflop levels on the new architecture. PDDP, a Fortran preprocessor under development at LLNL, is directed to a massively parallel machine that features loosely coupled distributed shared memory and that offers the convenience of programming a shared virtual address space. PDDP

distributes shared data among processors in a semi-automatic manner. The distributed data is then treated in parallel by the processors. We say semi-automatic because PDDP makes uses of FORTRAN 90 array syntax and a Fortran D method of distribution to achieve this parallelization. Synchronization is handled by PFP, a split-join model that uses the team concept of parallel computing and is the target model for PDDP. The BBN TC2000 computer is the developmental platform for PDDP. The TC2000 has 128 processors, each with its own local memory, cache, and a contribution to the shared memory.

4827 (UCRL-LR–111809) **Designing for scientific data analysis: From practice to prototype.** Springmeyer, R.R. Lawrence Livermore National Lab., CA (United States). Sep 1992. 210p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE93001509. Source: OSTI; NTIS; GPO Dep.

Thesis submitted to University of California, Davis.

Designers charged with creating tools for processes foreign to their own experience need a reliable source of application knowledge. This dissertation presents an empirical study of the scientific data analysis process in order to inform the design of tools for this important aspect of scientific computing. Interaction analysis and contextual inquiry methods were adapted to observe scientists analyzing their own data and to characterize the scientific dam analysis process. The characterization exposed elements of the process outside the conventional scientific visualization model that defines data analysis in terms of image generation. Scientists queried for quantitative information, made a variety of comparisons, applied mathematics, managed data, and kept records. Many such elements were only indirectly supported by computer. A detailed description of the scientific data analysis process was developed to provide a broad-based foundation of understanding which is rooted in empirical fact, reasonably comprehensive, and applicable to a range of scientific environments. The characterization of scientific data analysis led to design recommendations for improving the support of this process. The application of the results was demonstrated with the design, development, and study of a prototype tool for an inadequately supported scientific dam analysis element. Data culling is the identification and extraction of areas of interest in large scientific data sets. Modern workstation-based analysis tools require manageable subsets of data, but dam culling is not well supported. A prototype tool was designed and developed to explore a quantitative rather than image-based approach to identifying such subsets. Physicist end-users participated throughout the design, development, and evaluation process. The results of evaluations in the field established conditions under which a number-based approach to data selection effectively supplements an image-based approach.

The old joke that a camel is a horse put together by a committee implies, of course, that anything done by committee is certain to be done badly. The miscommunication and lack of coordination endemic in committee work surely must result in a product that is unlovely and unsuitable for the task for which the committee intended it. And of all things under the sun, writing by committee surely is the least likely of all tasks to turn out well. I'm here to show you how writing by committee works–and works well–in my job. In my job as a technical editor at Argonne National Laboratory, I worked primarily in the Computing and Telecommunications Division (CTD), where I edited technical and scientific documents, newsletter articles, and marketing materials. Frequently, I did high-level edits, even generating some text of my own, in collaboration with computational scientists and technicians in my division. In this presentation, I call these people author-experts–i.e., people who were involved with the production of multi-author texts. I am going to take you step by step through the text writing and reviewing process that we employ to ensure error-free and usable texts for the Argonne audience: from secretary to nuclear physicist.

This work describes the nuclear data center of the Instituto de Estudos Avancados in Brazil. The data are related to nuclear energy, theoretical physics, and experimental physics. (A.C.A.S.).

4830 (ES/ER/TM–39) **Data management plan for the Oak Ridge Environmental Information System, Version 1.1: Environmental Restoration Program.** Oak Ridge National Lab., TN (United States). 4 Aug 1992. 152p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE92041219. Source: OSTI; NTIS; INIS; GPO Dep.

The Data Management Plan (DMP) describes the data management objectives, system components, data base structure and contents, system maintenance, data processing, and user interface for the prototype phase of the Oak Ridge Environmental Information System (OREIS). The major goals of OREIS data management are to compile data of known quality, to maintain the integrity of the data base, and to provide data to users. The DMP defines the requirements, describes the responsibilities, and references the procedures for meeting the data management objectives. Emphasis is on management of measurement data and the associated metadata used to support its proper interpretation and legal defensibility. The DMP covers transmittal, processing, storage, and data access activities associated with OREIS. The OREIS data dictionary is provided as an appendix.

4831 (FAW-TR–92007) **A cooperative, natural language environmental information system.** Becker, R. (IBM Deutschland GmbH, Heidelberg (Germany). Inst. for Knowledge Based Systems (IKBS)); Kuepper, D.; Roesner, D.; Strobel, M. Ulm Univ. (Germany). Forschungsinstitut fuer Anwendungsorientierte Wissensverarbeitung (FAW). Apr 1992. 12p. (CONF-9209254–1: 12. world computer congress: From research to practice, Madrid (Spain), 7-11 Sep 1992). Order Number DE93728835. Source: OSTI; NTIS (US Sales Only).

This paper describes the extension of a natural language interface to relational databases with respect to its cooperative behavior. We argue that cooperative behavior is especially important for a complex domain such as environmental protection. In order to enrich traditional database reports our system- provides dialog-oriented features such as over-answering and handling of presupposition failure, as well as presentation-oriented features such as natural language responses and geographical maps. (orig.).

4832 (INIS-BR–3042) **Design and static simulation of secondary loop of small PWR nuclear power plants.** Martin Lopez, L.A.N. Sao Paulo Univ., SP (Brazil). Escola Politecnica. 1989 270p. (In Portuguese). Order Number DE93608118. Source: OSTI; NTIS (US Sales Only); INIS.

A computer program that has been developed with the purpose of making easier the decisions concerning the design of the secondary loop of small PWR nuclear power plants through numerical experiments of low running costs and short time is presented. Initially, the first part of the computer program is described. It aims to preliminarily design several major components of the secondary circuit from user-defined design conditions. Next, the second part of the computer program is presented. It simulates the steady state operation at part-load conditions of the preliminary design of the plant by generating and solving systems of simultaneous nonlinear algebraic equations, their number varying from 17 to 107. The

computer program has been tested for several application cases. The program results are discussed in the last part of the work, along with several aspects to be added to the program in future works. (author).

4833 (KAERI/TR–247/91) **Construction of a bibliographic information database for the nuclear engineering.** Kim, Tae Whan (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Lim, Yeon Soo; Kwac, Dong Chul. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Dec 1991. 63p. (In Korean). Order Number DE93608117. Source: OSTI; NTIS (US Sales Only); INIS.

The major goal of the project is to develop a nuclear science database of materials that have been published in Korea and to establish a network system that will give relevant information to people in the nuclear industry by linking this system with the proposed National Science Technical Information Network. This project aims to establish a database consisted of about 1,000 research reports that were prepared by KAERI from 1979 to 1990. The contents of the project are as follows: 1. Materials Selection and Collection 2. Index and Abstract Preparation 3. Data Input and Transmission. This project is intended to achieve the goal of maximum utilization of nuclear information in Korea. (Author).

4834 (KFK–4867) **Nuclear data libraries for the treatment of sequential (x,n) reactions in fusion materials activation calculations.** Cierjacks, S.; Oblozinsky, P.; Rzehorz, B. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Materialforschung. Jul 1991. 25p. Order Number DE93729014. Source: OSTI; NTIS (US Sales Only); INIS.

The current status of nuclear data libraries produced or under development for the kinematically complete treatment of sequential (x,n) reactions in fusion materials activation calculations is discussed. The existing libraries allow complete treatment virtually of all isotopes from Z = 1 through 42 ($A \leq 100$) with half-lifes exceeding 1 day for primary neutron energies $E_n < 20$ MeV and secondary charged particles x = p,d and α with energies $E_x < 24$ MeV. Production cross sections of charged particles for primary (n,x) reactions are derived from the evaluated activation file REAC-ECN-5. For the corresponding normalized charged particle spectra we created the starter file KFKSPEC, fully based on nuclear-reaction model calculations and presently containing 12 300 spectra with about 300 000 data points. The same approach was adopted to create the starter file KFKXN for charged particle induced (x,n) cross sections that contains 1025 different reactions and 24 600 data points. A complete set of differential ranges for light charged particles was generated for all elements from hydrogen to uranium and is stored in the KFKSTOP file which has 11 040 data points. (orig.).

4835 (WHC-SA–1480) **Meeting the challenge of responding to stakeholder information needs: A program model.** Birkland, V.L. (Boeing Computer Services Co., Richland, WA (United States)). Westinghouse Hanford Co., Richland, WA (United States). Sep 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-9210158–1: Infotech '92, Oak Ridge, TN (United States), 21-23 Oct 1992). Order Number DE93002047. Source: OSTI; NTIS; GPO Dep.

In a dynamic, changing environment, effective decision-making is reached at the lower levels of an organization. With this concept in mind, Westinghouse Hanford Company designed a comprehensive information release program to manage information as close as possible to the original source. This paper will describe that program and the issues associated with implementing its objectives: improve the release process to respond to stakeholder requirements and liability for noncompliance.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in ETDE/PUB–3, *International Energy: Research Organizations 1986–1990*. Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, indicated by International Organization for Standardization (ISO) country code; and (3) the language of the document if non-English (R;CA;In French). Author affiliations are not listed in this index.

Particulate behavior in a controlled-profile pulverized coal-Fired reactor: A study of coupled turbulent particle dispersion and thermal radiation transport: Quarterly technical progress report, June 15, 1992–September 14, 1992, 18:2593 (R;US)

British Geological Survey, Keyworth (United Kingdom). Fluid Processes Research Group
Uranium solubility and solubility controls in selected Needle's Eye groundwaters, 18:2732 (R;GB)

Brookhaven National Lab., Upton, NY (United States)
A basis for standardized seismic design (SSD) for nuclear power plants, 18:3392 (RA;US)
A comprehensive yardstick for residential thermal distribution efficiency, 18:3522 (R;US)
A framework for the assessment of severe accident management strategies, 18:3364 (RA;US)
A lattice calculation of the decay constants of heavy-light pseudoscalars, 18:4525 (R;US)
A model for calculation of RCS pressure during reflux boiling under reduced inventory conditions and its assessment against PKL data, 18:3383 (RA;US)
A performance indicator of the effectiveness of human-machine interfaces for nuclear power plants: Preliminary results, 18:3388 (RA;US)
A risk-based evaluation of action requirements for failures in systems required for shutdown, 18:3296 (R;US)
A structured approach to individual plant evaluation and accident management, 18:3363 (RA;US)
Accident simulation and consequence analysis in support of MHTGR safety evaluations, 18:3375 (RA;US)
Accomplishments and prospects, 18:3319 (RA;US)
ACE project Phases C and D: ACE/MCCI and MACE tests, 18:3356 (RA;US)
Adiabatic equilibrium models for direct containment heating, 18:3347 (RA;US)
Aging assessment of BWR control rod drive systems, 18:3331 (RA;US)
Aging related degradation in turbine drives and governors for safety related pumps, 18:3333 (RA;US)
Aging studies of 1E power and reactor protection systems, and transformers, 18:3325 (RA;US)
Aging, condition monitoring, and loss-of-coolant accident (LOCA) tests of Class 1E electrical cables: Summary of results, 18:3334 (RA;US)
An approach for assessing ALWR passive safety system reliability, 18:3377 (RA;US)
An overview of reactor physics standards: Past, present and future, 18:3041 (R;US)
Analyses of corium spreading in Mark I containment geometry, 18:3355 (RA;US)
Analysis of postulated events for the revised ALMR/PRISM design, 18:3374 (RA;US)

Analysis of the superconducting wiggler magnets for the ATF Harmonic Generation FEL experiment, 18:3991 (R;US)
Applications and extensions of degradation modeling, 18:3330 (RA;US)
Area detectors for neutron protein crystallography, 18:4017 (R;US)
Assessment of two BWR accident management strategies, 18:3365 (RA;US)
BETA: Brookhaven Event Tree Analyzer, 18:4787 (CM;US)
Boiling jet modeling on IFCI - Preliminary report, 18:3346 (RA;US)
Calculation of fuel pin failure timing under LOCA conditions, 18:3360 (RA;US)
Comparisons between HDR-H_2-distribution experiments E11.2 and E11.4, 18:3349 (RA;US)
Containment performance experiments under severe accident loadings, 18:3369 (RA;US)
CORA experiments on the materials behavior of LWR fuel rod bundles at high temperatures, 18:3345 (RA;US)
Core-concrete interactions with overlying water pools, 18:3357 (RA;US)
Design and performance of the Booster Beam Position Monitor system, 18:3986 (R;US)
Design studies on the RHIC position monitor system, 18:3995 (R;US)
Detecting and mitigating aging in component cooling water systems, 18:3327 (RA;US)
Effective charges, the valence p-n interaction, and the IBM, 18:4577 (R;US)
Effects of aging on calibration and response time of nuclear plant pressure transmitters, 18:3335 (RA;US)
Effects of hydrogen generation on severe accident natural circulation, 18:3384 (RA;US)
Electronic structure and fermiology of high temperature superconductors: Theoretical summary, 18:3613 (R;US)
Enhancing the seismic margin review methodology to obtain risk insights, 18:3367 (RA;US)
Estimation of mechanical properties of cast stainless steels during thermal aging in LWR systems, 18:3321 (RA;US)
EXAFS study of metal-coated particles produced by ball milling, 18:3569 (R;US)
Expanding the modeling capabilities of the cognitive environment simulation, 18:3378 (RA;US)
Exploiting digital systems technology to improve nuclear safety, 18:3373 (RA;US)
Fast excitation wiggler field measurement results, 18:3989 (R;US)
Fast repetition rate (FRR) fluorometer for making in situ measurements of primary productivity, 18:4223 (R;US)
Fatigue and environmentally assisted cracking in light water reactors, 18:3320 (RA;US)
Fractional activation of accumulation-mode particles in warm continental stratiform clouds, 18:4108 (R;US)
Free-electron laser research and development at BNL, 18:3969 (R;US)
Heavy-Section Steel Irradiation Program: Embrittlement issues, 18:3318 (RA;US)
Heavy-Section Steel Technology Program: Recent developments in crack initiation and arrest research, 18:3315 (RA;US)
High level seismic/vibrational tests at the HDR - An overview, 18:3370 (RA;US)
High-precision accelerator-mass-spectrometer radiocarbon dating of buried tidal-marsh soils - An approach to estimating the frequency and coastal extent of subduction zone earthquakes in Oregon and Washington, 18:3390 (RA;US)
Human Performance Investigation Process (HPIP), 18:3379 (RA;US)
Including test errors in evaluating surveillance test intervals, 18:3381 (RA;US)
Initial performance assessment of the Westinghouse AP600 containment design and related safety issues, 18:3376 (RA;US)
Integrated Level 3 risk assessment for the LaSalle Unit 2 Nuclear Power Plant, 18:3339 (RA;US)
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers, 18:3642 (R;US)
Intersystem LOCA risk assessment: Methodology and results, 18:3341 (RA;US)
Introduction to lattice gaugefixing and effective quark and gluon masses, 18:4562 (R;US)
Inverse Free Electron Laser accelerator, 18:3970 (R;US)
Iodine chemical forms in LWR severe accidents, 18:3359 (RA;US)
Large-Scale Seismic Test Program at Hualien, Taiwan, 18:3368 (RA;US)
Laser diagnostics for picosecond e-beams, 18:3992 (R;US)
Liquefaction induced by modern earthquakes as a key to paleoseismicity: A case study of the 1988 Saguenay event, 18:3389 (RA;US)
Low lying electric dipole excitations in nuclei of the rare earth region, 18:4579 (R;US)
Main safety issues related to IPSN severe accident research, 18:3353 (RA;US)
Managing water addition to a degraded core, 18:3361 (RA;US)
Mechanical-property degradation of cast stainless steel components from the Shippingport reactor, 18:3322 (RA;US)
MELCOR peer review, 18:3342 (RA;US)
Most likely failure location during severe accident conditions, 18:3350 (RA;US)
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique, 18:4263 (R;US)
New containment modeling features of the CONTAIN code, 18:3344 (RA;US)
New method for detecting degradation in installed cables in nuclear power plants, 18:3326 (RA;US)
NRC test results and operations experience provide insights for a new gate valve stem force correlation, 18:3329 (RA;US)
Nuclear fusion of protons with boron, 18:4738 (R;US)
On the prediction of steam explosions energetics, 18:3351 (RA;US)
Organizational factors influencing improvements in safety, 18:3380 (RA;US)
Parameter effects on molten debris spreading and coolability, 18:3354 (RA;US)
Performance characterization of isolation condenser of SBWR, 18:2983 (R;US)
Photoemission from Ag, Cu, and CsI, 18:3993 (R;US)
Pipe fracture behavior under high-rate (seismic) loading - The IPIRG program, 18:3316 (RA;US)
Planned MELCOR improvements and assessment, 18:3343 (RA;US)
Preliminary results of the PWR low power and shutdown accident frequencies program - Coarse screening analysis for Surry, 18:3337 (RA;US)
Progress in evaluation and improvement in nondestructive examination reliability for inservice inspection of light water reactors (LWRs) and characterizing fabrication flaws in reactor pressure vessels, 18:3323 (RA;US)
Progress in research on aging of structures, 18:3371 (RA;US)
Progress in the optoelectronic analog signal transfer for high energy particle detectors, 18:4016 (R;US)
Quench performance of six similar 17 m-long, 40 mm-aperture SSC model dipoles, 18:3990 (R;US)
Recent development and results from severe accident research in Japan, 18:3352 (RA;US)
Recycling of cadmium and selenium from photovoltaic modules and manufacturing wastes: A workshop report, 18:2938 (R;US)
Requirements and capabilities of PSA for safety management applications, 18:3295 (R;US)
Results of recent NUPEC hydrogen related tests, 18:3348 (RA;US)
Review of the technical basis and verification of current analysis methods used to predict seismic response of spent fuel storage racks, 18:3437 (R;US)
Risk effectiveness evaluation of surveillance testing, 18:3298 (R;US)
Risk-based configuration control: Application of PRA in improving technical specifications and operational safety, 18:3297 (R;US)
Risk-based performance indicators, 18:3340 (RA;US)
Scaling issues for a thermal-hydraulic integral test facility, 18:3385 (RA;US)
Short cracks in piping and piping welds, 18:3317 (RA;US)
Small break LOCA RELAP5/MOD3 uncertainty quantification: Bias and uncertainty evaluation for important phenomena, 18:3386 (RA;US)

Snubber aging assessment: Results of NPAR Phase 2 in-plant research, 18:3336 (RA;US)
Soil/structure interactions of eastern US type earthquakes, 18:3391 (RA;US)
Status of the low power and shutdown accident sequence analysis project for the Grand Gulf Nuclear Power Station, 18:3338 (RA;US)
Strangeness signals in heavy ion collisions, 18:4527 (R;US)
Studies performed in support of the proposed revision of engineering design aspects of 10CFR100, Appendix A, 18:3366 (RA;US)
Synchrotron radiation induced x-ray micro analysis: A realistic alternative for electron- and ion beam microscopy?, 18:4676 (R;US)
Synchrotron radiation sources and condensers for projection x-ray lithography, 18:3994 (R;US)
Tests in the ATLE loop on the PIUS design, 18:3372 (RA;US)
The characterization and selection of superconductor wire and cable for RHIC, 18:3988 (R;US)
The effect of aging upon CE and B and W control rod drives, 18:3332 (RA;US)
The effects of aging on friction of MOVs, 18:3328 (RA;US)
The energetics of ordered intermetallic alloys (of the transition metals), 18:3570 (R;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 18:3358 (RA;US)
Time dependent magnetization effects in superconducting accelerator magnets, 18:3987 (R;US)
Tools for a career in science, 18:4758 (R;US)
Universal treatment of plumes and stresses for pressurized thermal shock evaluations, 18:3387 (RA;US)
US nuclear industry approach to severe accident management guidance development and implementation, 18:3362 (RA;US)
Validation and transfer of advanced NDE technologies, 18:3324 (RA;US)
Verification and validation of expert systems, 18:3382 (RA;US)
Workshop on hadron structure from photo-reactions at intermediate energies: Proceedings, 18:4526 (R;US)
X-ray absorption spectroscopy beyond the core-hole lifetime, 18:4653 (R;US)

Bundesamt fuer Energiewirtschaft, Bern (Switzerland)
Photovoltaics in Switzerland, 18:2939 (R;CH;In German)

CONEG Policy Research Center, Inc., Washington, DC (United States)
Northeast Regional Biomass Program ninth year, third quarter report, April–June 1992, 18:2861 (R;US)

Connecticut Univ., Storrs, CT (United States)
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f → 5d transitions in crystals and glasses: Final report, June 1, 1984–May 31, 1992, 18:3825 (R;US)
[Investigations in particle and field theory]: Progress report, September 1992, 18:4490 (R;US)

Consolidation Coal Co., Library, PA (United States). Research and Development Dept.
Coal liquefaction process streams characterization and evaluation: Quarterly technical progress report, January 1–March 31, 1992, 18:2544 (R;US)
Coal liquefaction process streams characterization and evaluation: Characterization of coal-derived materials by field desorption mass spectrometry, two-dimensional nuclear magnetic resonance, supercritical fluid extraction, and supercritical fluid chromatography/mass spectrometry, 18:2545 (R;US)

Consortium for Fossil Fuel Liquefaction Science, Lexington, KY (United States)
Basic process/resource evaluation task. Coal maceral characterization and liquefaction, 18:2540 (RA;US)
Basic process/resource evaluation task. Coal liquefaction catalysis, 18:2541 (RA;US)
Basic process/resource evaluation task. The role of hydrogen during liquefaction using donor and non-donor solvents, 18:2542 (RA;US)
Basic process/resource evaluation task. Liquefaction of U.S. coals, 18:2543 (RA;US)
Bioprocessing of coal, 18:2521 (RA;US)
Enhanced reactivity and selectivity in coal liquefaction and co-processing systems. Cyclic olefins: New donors for coal liquefaction and co-processing systems, 18:2533 (RA;US)
Enhanced reactivity and selectivity in coal liquefaction and co-processing systems. Catalytic coprocessing study using probe reactants, 18:2534 (RA;US)
Enhanced reactivity and selectivity in coal liquefaction and coprocessing systems. Improved catalysts for coal liquefaction and coprocessing, 18:2535 (RA;US)
Enhanced reactivity and selectivity in coal liquefaction and co-processing systems. Reduced coal liquefaction process severity through better hydrogen gas-liquid mass transfer, 18:2536 (RA;US)
Integrated coal liquefaction/characterization. Coal structure/liquefaction yield correlation by means of advanced NMR techniques, 18:2537 (RA;US)
Integrated coal liquefaction/characterization. Solvent extraction and pyrolysis, 18:2538 (RA;US)
Integrated coal liquefaction/characterization. Low temperature depolymerization and liquefaction of Premium U.S. coal samples, 18:2539 (RA;US)
Integrated coal liquefaction/characterization. Molecular weight determination of coal derived liquids by mass spectrometric techniques, 18:2564 (RA;US)
Integrated coal liquefaction/characterization. Fourier transform IR and chromatographic studies in coal liquefaction chemistry, 18:2565 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Chemical routes to breaking bonds: New approaches to low temperature liquefaction, 18:2528 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Role of free radicals and catalysis-active sites in coal liquefaction, 18:2529 (RA;US)

Liquefaction research in pyrolysis, catalysis and coal dissolution. Kinetics of coal hydrogenation and cracking with Lewis acids, 18:2530 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Low temperature extraction with supersolvents, 18:2531 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Evaluation of residue from the WVU coal extraction process as a disposable hydrotreatment catalyst, 18:2532 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Calculation of physical properties for complex fluids in coal liquefaction, 18:2563 (RA;US)
Materials characterization study of coal liquefaction processes. Structure and size distributions of highly dispersed iron-based catalysts, 18:2522 (RA;US)
Materials characterization study of coal liquefaction processes. Spectroscopic studies of the pyrolysis of organic sulfur compounds, 18:2523 (RA;US)
Materials characterization study of coal liquefaction processes. Computer modeling of vitrinite, 18:2524 (RA;US)
Materials characterization study of coal liquefaction processes. XAFS and Mossbauer spectroscopy and CCSEM studies of coals of interest in the CFFLS program, 18:2561 (RA;US)
Materials characterization study of coal liquefaction processes. Surface characterization of coals by XPS, 18:2562 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal. Catalysis by soluble iron and molybdenum precursors for coprocessing of Argonne premium coals, 18:2525 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal. Coal liquefaction under mild conditions using triflic acid, iodine, and their combination, 18:2526 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal. On the coliquefaction of coal with lignin, 18:2527 (RA;US)
Overview of research conducted by the Consortium for Fossil Fuel Liquefaction Science, 18:2520 (RA;US)

Cornell Univ., Ithaca, NY (United States)
Twin boundaries, interfaces and modulated structures in martensites: Final report, 18:3577 (R;US)

Report on intercomparison of the determination of elemental concentrations in the air particulate samples collected on Whatman - 41 filters, 18:3736 (RA;XA)
Solid phase extraction of As(III) from aqueous samples using on-column formation of As(III)-Trispyrrolidinedithiocarbamate, 18:3798 (RA;XA)
Studies with doubly-labelled water of adaptation in humans, 18:4313 (RA;XA)
Studies with doubly-labelled water of adaptation in human energy needs in Malaysia, 18:4315 (RA;XA)
Study of atmospheric aerosols in Zaire by instrumental neutron activation analysis, atomic absorption spectrophotometry and ion-exchange chromatography, 18:3735 (RA;XA)
Study of coal combustion aerosols using size fractionating sampling and nuclear analytical techniques, 18:3718 (RA;XA)
Study of the atmospheric aerosol composition in Zaire using nuclear and nuclear related techniques, 18:3701 (RA;XA)
Study of the atmospheric aerosol composition and some characteristics by PIXE technique, 18:3722 (RA;XA)
Study on mercury level in scalp hair of typical human populations exposed to mercury in China by NAA and other techniques, 18:3711 (RA;XA)
Support for studies with doubly labelled water of adaptation in human energy needs in India, Malaysia and Mexico, 18:4306 (RA;XA)
Synthesis of ^{13}C labelled lactose for metabolic studies, 18:4307 (RA;XA)
The application of nuclear and nuclear-related techniques for environmental pollution studies in Vietnam, 18:3734 (RA;XA)
The effect of continuous work on discretional energy expenditure in male adult construction workers in northern Mexico, 18:4316 (RA;XA)
The effect of methylmercury on small animals and the use of their hair as a reference material for Hg and methylmercury analytical quality control, 18:3715 (RA;XA)
The environmental implications of lignite ash on water qualities, 18:3692 (RA;XA)
The K_o - standardization method of NAA as a tool for studying environmental pollution problems, 18:3694 (RA;XA)
The study of chemical forms of mercury in human hair and other bio-environmental samples, 18:3799 (RA;XA)
The use of neutron activation analysis for the study of environmental risks associated with the fly ash from burning Polish coals, 18:3687 (RA;XA)
The use of neutron activation analysis for the study of environmental risks associated with the fly ash from burning Polish coals, 18:3728 (RA;XA)
Total mercury and methylmercury levels in pregnant women, nursing women and preschool children resident in fishing villages in the eighth region of Chile, 18:3710 (RA;XA)
Toxic and trace elements in foodstuffs in Japan, 18:3683 (RA;XA)
Toxic elements in air particulate matter in the area of Thessaloniki, Greece, 18:3689 (RA;XA)
Trace element dietary assessment for the inhabitants of Gujranwala, 18:3675 (RA;XA)

International Centre for Theoretical Physics, Trieste (Italy)

17 keV neutrino and large magnetic moment solution of the solar neutrino puzzle, 18:4516 (R;XA)
A note on the Dirac canonical quantization of massive Yang-Mills theory, 18:4500 (R;XA)
A version of superstring with four space-time dimensions, 18:4497 (R;XA)
AGFA differential cross sections for the excitation $1s^2S^e \rightarrow 2s^2Se$ transitions in H by electron impact at 1 Rydberg, 18:4666 (R;XA)
$B \rightarrow KI^+I^-$ decay in supersymmetric theories, 18:4549 (R;XA)
Biharmonic pattern selection, 18:4457 (R;XA)
Binding and excitation energies of Lennard-Jones clusters in the 1/d-method, 18:4672 (R;XA)
BRST cohomology ring in 2D gravity coupled to minimal models, 18:4492 (R;XA)
Calculations of wavefunctions and energies of electron system in Coulomb potential by variational method without a basis set, 18:4438 (R;XA)
Cavitiless dielectric-waveguide-mode generation in a weakly amplifying gaseous medium, 18:4655 (R;XA)
Chaotic dynamics of high density photon an exciton system, 18:4656 (R;XA)
Computer simulation of energy profiles in a plasma focus device, 18:4713 (R;XA)
Conformation analysis of trehalose. Molecular dynamics simulation and molecular mechanics, 18:3800 (R;XA)
Covariant Bethe-Salpeter wave functions for heavy hadrons, 18:4569 (R;XA)
Dependence of critical exponents on θ parameter in anyon lattice model, 18:4692 (R;XA)
Distribution function of excitations in systems with fractional statistics, 18:4496 (R;XA)
Dynamical groups of a particle in a periodic potential, 18:4442 (R;XA)
Effective interactions between concentration fluctuations and charge transfer in chemically ordering liquid alloys, 18:3588 (R;XA)
Electronic Landau levels in quantum wells with periodically structured interfaces, 18:4650 (R;XA)
Exciton solitary waves in molecular crystals, 18:4686 (R;XA)
Excitonic bistabilities, instabilities and chaos in laser-pumped semiconductor, 18:4682 (R;XA)
Ground-state energy for 1D (t,U,X)-model at low densities, 18:4651 (R;XA)

H+ impact ionization of Ar, 18:4667 (R;XA)
Information-theoretic and Wigner function approaches to the non-classical states dynamics for the variable frequency harmonic oscillator, 18:4443 (R;XA)
Information-theoretic outlook of the quantum dissipation problem, 18:4439 (R;XA)
Instabilities and nonstatistical behavior in globally coupled systems, 18:4456 (R;XA)
Inversion of resistivity soundings in the archaeological site of Mahilaka (North-West of Madagascar) using the generalized linear inverse method, 18:4189 (R;XA)
Kinetic nonlinear electron-ion two stream instability in field-free isothermal plasma, 18:4715 (R;XA)
Lepton-quark families, cosmic strings and "democratic" mass matrix, 18:4515 (R;XA)
Life and water, 18:4458 (R;XA)
Local order and concentration fluctuations in K-Pb and Rb-Pb alloys, 18:3589 (R;XA)
Microscopic origin of marginal Fermi-liquid in strongly correlated spin systems, 18:4691 (R;XA)
New edge magnetoplasmon for a two-dimensional electron gas in a ring geometry, 18:4700 (R;XA)
Nonlinear radiation of waves at combination frequencies due to radiation-surface wave interaction in plasmas, 18:4714 (R;XA)
Nonlinear response function for two-phonon polaritons, 18:4685 (R;XA)
Nth roots with Hilbert-Schmidt defect operator of normal contractions, 18:4440 (R;XA)
On intermediate energy heavy ion optical model potential, 18:4621 (R;XA)
On the magnetoresistance of heavy fermion compounds, 18:4684 (R;XA)
On the scalar curvature of self-dual manifolds, 18:4494 (R;XA)
Q-deformed conformal superalgebra and its Hopf subalgebras, 18:4437 (R;XA)
Qualitative picture of mesons in the Dirac oscillator theory, 18:4514 (R;XA)
Quantum group and symmetry of the heat equation, 18:3941 (R;XA)
Radiation reaction for the classical relativistic spinning particle in scalar, tensor and linearized gravitational fields, 18:4495 (R;XA)
Radiative electroweak breaking and sparticle spectroscopy with tan $\beta \simeq (m_t)/m_b$, 18:4568 (R;XA)
Renormalization of Yang-Mills theory in the light-cone gauge using Lagrange-multiplier field, 18:4499 (R;XA)
Spline approximation for system of n-th order nonlinear ordinary differential equations, 18:4459 (R;XA)
The constraint for the lowest Landau level and the effective field theory approach for the fractional quantum hall system, 18:4501 (R;XA)
The Lax operator approach for the Virasoro and the W-constraints in the generalized KdV hierarchy, 18:4498 (R;XA)
The Optical Stark effect of the exciton due to dynamical coupling between quantized states of the electron and hole in quantum wells, 18:4654 (R;XA)
The three-body problem in the ground-state representation, 18:4441 (R;XA)
Three lectures on quantum groups: Representations, duality, real forms, 18:4436 (R;XA)
Two-photon emission spectrum of a two-level atom in a cavity, 18:4649 (R;XA)
WA-circumflex(n - 1 modul n - 1)(1) Miura transformation: Analysis and applications, 18:4493 (R;XA)
Wave function collapse phenomenon in the Na isoelectronic sequence, 18:4648 (R;XA)

International Fuel Cells Corp., South Windsor, CT (United States)
Advanced water-cooled phosphoric acid fuel cell development: Final report, 18:3512 (R;US)
Advanced Water-Cooled Phosphoric Acid Fuel Cell Development: Quarterly technical progress report No. 47, January–March, 1992, 18:3513 (R;US)
Simulated Coal-Gas-Fueled Molten Carbonate Fuel Cell Development Program: Final report, 18:3514 (R;US)

International Solar Electric Technology, Inglewood, CA (United States)
Low-cost $CuInSe_2$ submodule development: Final subcontract report, 9 July 1990–31 January 1992, 18:2921 (R;US)

Internationale Atomreaktorbau GmbH (INTERATOM), Bergisch Gladbach (Germany)
Benchmark calculations, 18:3193 (RA;XA)
Fundamental calculational model for the determination of the radiological effects, inside and outside a research reactor, after hypothetical accidents, with release of high amounts of fission products from the core, 18:3095 (RA;XA)
Safety analyses for the IAEA generic 10 MW reactor, 18:3172 (RA;XA)

Iowa State Univ. of Science and Technology, Ames, IA (United States)
Very high energy gamma ray astrophysics: Technical progress report, May 1, 1990–April 30, 1991, 18:4454 (R;US)

J

Jacobs Engineering Group, Inc., St. Charles, MO (United States)
Quarry Haul Road Ecological Survey: Weldon Spring Site Remedial Action Project, Weldon Spring, Missouri: Revision 1, 18:2831 (R;US)

Jet Propulsion Lab., Pasadena, CA (United States)
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application, 18:3663 (R;US)
Electron cyclotron resonance deposition of amorphous silicon alloy films and devices: Final subcontract report, 1 April 1991–31 March 1992, 18:2919 (R;US)

Johns Hopkins Univ., Baltimore, MD (United States). School of Hygiene and Public Health
Regional aerosol deposition in human upper airways: Progress report, March 1, 1992–February 28, 1993, 18:4384 (R;US)

Joint Inst. for Nuclear Research, Dubna (Russian Federation)
π^--meson production in the interaction of deuterons at 1 GeV per nucleon with carbon and beryllium extended targets, 18:4634 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation
Mathematical simulation of the induced γ-radiation in structural materials of spaceships, 18:3595 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Neutron Physics
The determination of the thickness of the film materials by the PIXE method, 18:3767 (R;SU;In Russian)

Junta de Energia Nuclear, Madrid (Spain)
Calculations for the safety-related benchmark problem, 18:3197 (RA;XA)

K

Kaiserslautern Univ. (Germany). Fachbereich Informatik
Visualization in complex systems and its application in environmental protection, 18:4806 (R;DE;In German)

Kansas Corp. Commission, Topeka, KS (United States)
First International Alternative Fueled Vehicle Round-Up, 18:3559 (R;US)

Kansas State Univ., Manhattan, KS (United States)
Kansas energy 2000 DOE/EPSCoR: Inventory of energy related assets, 18:3460 (R;US)
Kansas energy 2000: DOE/EPSCoR: Survey of the use of energy-related information by Kansas businesses: [Progress report], 18:3459 (R;US)
Kansas State University (KSU), DOE EV Site Operator Program: First quarter report, July 1–September 30, 1992, 18:3555 (R;US)

Kansas State Univ., Manhattan, KS (United States). Dept. of Nuclear Engineering
Improved response functions for gamma-ray skyshine analyses, 18:4646 (R;US)

Kansas State Univ., Manhattan, KS (United States). Inst. for Social and Behavioral Research
Kansas energy 2000: Inventory of energy related assets, University of Kansas, 18:3481 (R;US)
Kansas energy 2000: Inventory of energy related assets, research area summary, Kansas State University, University of Kansas, Wichita State University: Volume 1, 18:3482 (R;US)

Karlsruhe Univ. (T.H.) (Germany). Fakultaet fuer Chemie
Study of surface properties and adhesion mechanisms between layers of different composition with surface analytical methods, 18:3657 (R;DE;In German)

Karlsruhe Univ. (T.H.) (Germany). Fakultaet fuer Maschinenbau
Consequences and effectiveness of relocation after nuclear accidents, 18:3312 (R;DE;In German)
On the influence of internal interfaces and properties of multiphase hard material coatings, 18:3633 (R;DE;In German)
Realtime graphics support for remote handling operations in complex working environments within the framework of a control, simulation and off-line programming system, 18:3916 (R;DE;In German)

Karlsruhe Univ. (T.H.) (Germany). Fakultaet fuer Physik
First observation of the inelastic neutrino-nucleus-scattering $\nu+{}^{12}C \rightarrow \nu'+{}^{12}C^*$, 18:4635 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Hauptabteilung Ingenieurtechnik
New evaluation methods for plutonium assay by passive neutron interrogation of barrels with heavy and heterogeneous waste, 18:4036 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Hauptabteilung Sicherheit
Annual report 1991 of the Central Safety Department, 18:3496 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Datenverarbeitung in der Technik
Visualization in complex systems and its application in environmental protection, 18:4806 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Kernphysik
First observation of the inelastic neutrino-nucleus-scattering $\nu+{}^{12}C \rightarrow \nu'+{}^{12}C^*$, 18:4635 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Materialforschung
Annual report 1991 on R and D work by the Institute for Materials and Solid State Research (IMF), Karlsruhe Nuclear Research Center, 18:3566 (R;DE;In German)
Inherently effective shutdown system with Curie point controlled sensor/switch unit, 18:3024 (R;DE)
Nuclear data libraries for the treatment of sequential (x,n) reactions in fusion materials activation calculations, 18:4834 (R;DE)
On the influence of internal interfaces and properties of multiphase hard material coatings, 18:3633 (R;DE;In German)
Quality criteria for high T_c superconductors and on the clarification of the superconducting mechanism, 18:3632 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Neutronenphysik und Reaktortechnik
Consequences and effectiveness of relocation after nuclear accidents, 18:3312 (R;DE;In German)
New evaluation methods for plutonium assay by passive neutron interrogation of barrels with heavy and heterogeneous waste, 18:4036 (R;DE;In German)
PLXY - a code for the solution of the multigroup neutron transport equation x-y geometry by a spherical harmonics method of general order, 18:4644 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Entsorgungstechnik
A vector-computer-oriented method for a combined calculation of geochemical and mass transport processes in aquifers, 18:4248 (RA;DE;In German)
Behavior of decontaminable coatings prior to and after exposure to ionizing radiation, 18:3915 (R;DE)
Development of a simulation model for coupling microbial transformations and chemical equilibrium reactions, 18:4249 (RA;DE;In German)
How strong are the interactions of the main components on the calculated activity of the minor and trace components in natural waters? - A case study with Pitzer's model BrinEQ, 18:4250 (RA;DE;In German)
Kinetic studies on metal interactions between water and clay minerals, 18:4246 (RA;DE;In German)
Species distribution models and complexing on natural organic macromolecules, 18:4247 (RA;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Radiochemie
Study of surface properties and adhesion mechanisms between layers of different composition with surface analytical methods, 18:3657 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Reaktorentwicklung (IRE)
Realtime graphics support for remote handling operations in complex working environments within the framework of a control, simulation and off-line programming system, 18:3916 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Reaktorsicherheit
Preliminary safety assessment of the NET magnet system, 18:4751 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Technische Physik
Numerical study of a 50 kA superconducting bus for the NET/ITER model coil test in TOSKA-upgrade, 18:4694 (R;DE)
Preliminary safety assessment of the NET magnet system, 18:4751 (R;DE)
Report of results and of research and development work at the Institute of Technical Physics 1991, 18:4750 (R;DE;In German)
Stability of superconducting cables for use in large magnet systems, 18:4693 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Koordinationsstelle Internationale Forschung zur Nuklearen Entsorgung (KNE)
New evaluation methods for plutonium assay by passive neutron interrogation of barrels with heavy and heterogeneous waste, 18:4036 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Europaelsches Forschungszentrum fuer Massnahmen zur Luftreinhaltung (PEF)
7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe, 18:4387 (R;DE;In German)
Biochemical and physiological investigations to detect effects of air pollutants on spruce in open-top-chambers, 18:4409 (RA;DE;In German)
Changes in photosynthetic activity, chlorophyll-fluorescence parameters and pigment content of differently damaged spruces during the vegetation period, 18:4395 (RA;DE;In German)
CO_2-gas-exchange and transpiration of open grown Norway spruce during the year in higher elevations of the Southern Black Forest under local air conditions with and without O_3 respectively, 18:4388 (RA;DE;In German)
Detection of damages of trees with time resolved luminescence, 18:4394 (RA;DE;In German)
Development of a decision support system for emission reduction and emission control technologies, 18:4136 (R;DE;In German)
Ecophysiological measurements on pollutant stressed trees - OTC Edelmannshof, 18:4407 (RA;DE;In German)
Efficient strategies for air pollution control in Baden-Wuerttemberg, 18:4134 (RA;DE;In German)
Experiment with exclusion of gaseous pollutants on spruce trees at Edelmannshof. Pt. A. Chamber operation (results of investigation on climate and air chemistry), 18:4135 (RA;DE;In German)
Experiment with exclusion of gaseous pollutants on spruce trees at Edelmannshof. Pt. B. Investigations on mineral cycling, 18:4406 (RA;DE;In German)
Genetic structures of forest trees with different levels of damage on permanent observation plots on forest decline in Baden-Wuerttemberg, 18:4393 (RA;DE;In German)
Heavy metal budget of Norway spruce, 18:4401 (RA;DE;In German)

Histological and histochemical investigations on the nutrient dynamics in forest trees with regard to the 'New-type forest decline'. Pt. 4. Binding forms and micromorphological distribution of calcium in spruce needles, 18:4403 (RA;DE;In German)
Immission measurements at Schoellkopf near Freudenstadt, 18:4389 (RA;DE;In German)
Intermediates of carbohydrates and energy metabolism in spruce needles in relation to season and decline symptoms, 18:4391 (RA;DE;In German)
Mineral weathering and mineral destruction caused by acidification in forest stands of the Black Forest (Germany). First communication. Major aims and first results from the ARINUS stands 'Schluchsee and Villingen', 18:4402 (RA;DE;In German)
Multi-element analysis of invertebrate animals in the ecosystem 'spruce stand', 18:4398 (RA;DE;In German)
Open top chamber experiment 'Edelmannshof': Determination of biochemical parameters in needles of Norway spruce fumigated with unfiltered or charcoal-filtered air in comparison to untreated trees, 18:4408 (RA;DE;In German)
Physiological and biochemical investigations into the yellowing of spruce at higher altitudes. Pt. 4. Stability of the light-harvesting chlorophyll-a/b-protein, pigment content, activity of the xanthophyll cycle, and the sensitizing role of chlorophyll, 18:4390 (RA;DE;In German)
Physiological and cytomorphological investigations of undamaged and damaged spruce in the Northern Black Forest, 18:4392 (RA;DE;In German)
Project ARINUS: V. element cycling in the control watersheds and fertilizer leaching, 18:4400 (RA;DE;In German)
Reference data of forest growth, 18:4410 (RA;DE;In German)
Reflectance spectra of leaves and needles as basis for the physiological evaluation of tree damage. Pt. 4. Composition of chlorophyll-protein-complexes and first estimation of biomass production, 18:4396 (RA;DE;In German)
Soil ciliates as indicators of fundamental changes in forest ecosystems, 18:4397 (RA;DE;In German)
Statistical analysis of the physiological and biochemical data from the PEF research groups, 18:4405 (RA;DE;In German)
The dependence of the success of natural regeneration on upper soil conditions and degree of acidity in declined forest stands of the Black Forest, 18:4404 (RA;DE;In German)
Uptake and localization of nutritive and potantially toxic minerlas in ectomycorrhizae of forest trees, 18:4399 (RA;DE;In German)
Uptake and localization of nutritive and potentially toxic minerals in ectomycorrhizas of forest trees, 18:4201 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion
Numerical study of a 50 kA superconducting bus for the NET/ITER model coil test in TOSKA-upgrade, 18:4694 (R;DE)
Preliminary safety assessment of the NET magnet system, 18:4751 (R;DE)
Stability of superconducting cables for use in large magnet systems, 18:4693 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Nukleare Sicherheitsforschung
Consequences and effectiveness of relocation after nuclear accidents, 18:3312 (R;DE;In German)
Inherently effective shutdown system with Curie point controlled sensor/switch unit, 18:3024 (R;DE)
PLXY - a code for the solution of the multigroup neutron transport equation x-y geometry by a spherical harmonics method of general order, 18:4644 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Schadstoff- und Abfallarme Verfahren (PSA)
Visualization in complex systems and its application in environmental protection, 18:4806 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Umwelt und Gesundheit (PUG)
Characterization of surfactant apoproteins after damage of alveolar tissue caused by exposure with NO_2, and their pathogenetic role in toxic lung injury, 18:4416 (RA;DE;In German)
Combined effects of gases and particles on alveolar macrophages in vitro, 18:4421 (RA;DE;In German)
Dust induced stimulation of reactive oxygen species release in bovine alveolar macrophages, 18:4420 (RA;DE;In German)
Effect of exposure to ozone and subsequent infection with respiratory syncytial virus (RSV) on alveolar macrophage functions and immune responses to inhaled antigen, 18:4414 (RA;DE;In German)
Effects of outdoor and indoor air pollution on lung function, bronchial hyperreactivity, risk of pulmonary disease and course of disease, 18:4412 (RA;DE;In German)
First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe, 18:4411 (R;DE;In German)
Influence of air pollution on the airways of children. Summary of effects of air pollutants and positive predictive analyses of skin sensibilisation, 18:4432 (RA;DE;In German)
Investigations on lucigenin-enhanced chemiluminescence of alveolar macrophages following exposure to exogenous noxious agents, 18:4419 (RA;DE;In German)
Matrix structures in preneoplasias and lung tumours. Correlation to environmental noxes, 18:4423 (RA;DE;In German)
Metabolic changes of human lung fibroblasts after exposure to ozone, 18:4418 (RA;DE;In German)
Results of a chronic inhalation with N-nitrosodimethylamine (NDMA) and SO_2/NO_x, 18:4417 (RA;DE;In German)
Studies of pathophysiologic and pathomorphologic effects of inhalative exposure to low concentrations of the air pollutants NO_2 and SO_2 on the epithelium of trachea, submucosal tracheal glands and peripheral airways in the rat, 18:4415 (RA;DE;In German)
Studies on the detection of toxic, genotoxic and carcinogenic effects induced by exposure to heavy metals, 18:4422 (RA;DE;In German)
The effect of ozone inhalation on the airway response to inhaled allergens, 18:4413 (RA;DE;In German)

Knolls Atomic Power Lab., Schenectady, NY (United States)
Gold ink coating of thermocouple sheaths, 18:4049 (PA;US)
Knolls Atomic Power Laboratory annual environmental monitoring report, Calendar year 1991, 18:3028 (R;US)

Komenskeho Univ., Bratislava (Czechoslovakia). Prirodovedecka Fakulta
Sorption and fixation of biotoxic radionuclides on zeolites for decontamination of the spent fuel elements cooling medium, 18:3806 (I;CS;In Czech)

Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)
A safety study on spent fuel management: A study on the behavior of a spent fuel storage structure subject to heavy dropped impact loads, 18:2752 (R;KR;In Korean)
A state-of-the-art report on the In-reactor densification and resintering test, 18:2629 (R;KR;In Korean)
A study on nuclear materials by neutron scattering, 18:4643 (R;KR;In Korean)
A study on proton irradiation effects on nuclear materials using cyclotron, 18:3596 (R;KR;In Korean)
A study on the behavior of defective LWR spent fuel, 18:2693 (R;KR;In Korean)
A study on the safety of spent fuel management: A scenario study on spent fuel management, 18:2746 (R;KR;In Korean)
A study on the safety of spent fuel management: Radioactive source term modelling, 18:2749 (R;KR;In Korean)
A study on the safety of spent fuel management: A study on the radioactive gas treatment system, 18:2755 (R;KR;In Korean)
Annual report of heavy water reactor fuel division, 18:3066 (R;KR;In Korean)
Applications of optical fiber to remote laser fluorescence analysis, 18:3768 (R;KR;In Korean)
Basic chemistry for radioactive waste management: Studies on the chemical behaviors of radioactive elements, 18:2745 (R;KR;In Korean)
Basic chemistry for radioactive waste management: Study on the corrosion of materials for radwaste containment, 18:2747 (R;KR;In Korean)
Basic chemistry for radioactive waste management: Development of chemical methods on geological material analysis, 18:3769 (R;KR;In Korean)

Construction of a bibliographic information database for the nuclear engineering, 18:4833 (R;KR;In Korean)
Control system setpoint study for westinghouse plant, 18:3078 (R;KR;In Korean)
Determination of allowable ramp power levels to maintain the mechanical integrity for 14x14, 16x16 and 17x17 KOFAs, 18:3063 (R;KR)
Development of cask and transportation system: Installation and test operation of UF_4 pilot plant, 18:2853 (R;KR;In Korean)
Development of cask and transportation system: Study on the cask design, test and transportation system, 18:2715 (R;KR;In Korean)
Development of hold-down spring for high burn-up fuel assembly, 18:3060 (R;KR;In Korean)
Development of ion implanter and implantation technology for industrial uses, 18:2857 (R;KR;In Korean)
Development of nuclear fuels. Development of post-irradiation examination and evaluation techniques for nuclear reactor fuel (II), 18:3061 (R;KR;In Korean)
Development of spent fuel storage process equipment: Development of spent fuel remote handling equipment and maintenance technology, 18:2714 (R;KR;In Korean)
Development of the radiological consequences analysis model for the postulated accidents, 18:3098 (R;KR;In Korean)
Development of the safety assessment technology for the radioactive waste disposal: Analyses of container corrosion and radionuclide release, 18:2748 (R;KR;In Korean)
Development of the safety assessment technology for the radwaste disposal, 18:2753 (R;KR;In Korean)
Development of the safety assessment technology for the radwaste disposal: Development of the safety assessment computer code for the radwaste disposal, 18:2757 (R;KR;In Korean)
Development of the safety assessment technology for the radwaste disposal: A study on the migration of radionuclides in the repository, 18:2759 (R;KR;In Korean)
Evaluation of structural behavior geological and hydrogeological characteristics: A study on the ground water flow and hydrogeological interaction in fractured rock masses, 18:4200 (R;KR;In Korean)
Evaluation of structural behavior, geological and hydrogeological characteristics: Shear behavior of rock joints, 18:2819 (R;KR;In Korean)
Evaluation of structural behavior, geological and hydrogeological characteristics: A study on the structural behavior of underground openings considering the effect of excavation, 18:2750 (R;KR;In Korean)
Experimental data base of turbulent flow in rod bundles using laser doppler velocimeter, 18:3944 (R;KR)

National Radiological Protection Board, Chilton (United Kingdom)
Corporate plan 1992/93 to 1996/97, 18:4355 (I;GB)

National Renewable Energy Lab., Golden, CO (United States)
A comparison of data from SOLMET/ERSATZ and the National Solar Radiation Data Base, 18:2910 (R;US)
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines, 18:2954 (R;US)
A novel fermentation process for calcium magnesium acetate (CMA) production from cheese whey, 18:2893 (RA;US)
A two-phase method to produce gel beads: Application in the design of a whole cell β-galactosidase catalyst, 18:4272 (RA;US)
Acidogenic mine tailings: The use of biofilm bacteria to exclude oxygen, 18:4227 (RA;US)
Application of novel technology to the ABE fermentation process: An economic analysis, 18:2886 (RA;US)
Bioconversion of vanillin into vanillic acid by Pseudomonas fluorescens strain BTP9: Cell reactors and mutants study, 18:2888 (RA;US)
Bioleaching of low-grade copper ores using Thiobacillus ferrooxidans, 18:4375 (RA;US)
Cellobiose hydrolysis by glutaraldehyde-treated β-glucosidase entrapped in propylene glycol alginate/bone gelatin spheres, 18:2878 (RA;US)
Chemical interaction of flue gas components with the growth of Cyanidium caldarium, 18:4380 (RA;US)
CO_2 removal by high-density culture of a marine cyanobacterium Synechococcus sp. using an improved photobioreactor employing light-diffusing optical fibers, 18:4376 (RA;US)
Comparison of steam pretreatment of eucalyptus, aspen, and spruce wood chips and their enzymatic hydrolysis, 18:2865 (RA;US)
Conversion of bioprocess ethanol to industrial chemical products: Applications of process models for energy-economic assessments, 18:2889 (RA;US)
Degradation of munition wastes by Phanerochaete chrysosporium, 18:4225 (RA;US)
Determination of reaction kinetics of wheat straw using thermogravimetric analysis, 18:2867 (RA;US)
Dilute sulfuric acid pretreatment of corn stover at high solids concentrations, 18:2899 (RA;US)
Dilute-acid pretreatment of two short-rotation herbaceous crops, 18:2870 (RA;US)
Direct microbial conversion: Prospects, progress, and obstacles, 18:2890 (RA;US)
Effect of acetic acid on xylose conversion to ethanol by genetically engineered E. coli, 18:2874 (RA;US)
Effects of cell-wall acetate, xylan backbone, and lignin on enzymatic hydrolysis of aspen wood, 18:2864 (RA;US)
Effects of natural polymer acetylation on the anaerobic bioconversion to methane and carbon dioxide, 18:2900 (RA;US)
Efficacy of hydrolytic enzyme augmentation and thermochemical pretreatments for increased secondary anaerobic digestion of treated municipal sewage sludges, 18:2901 (RA;US)
Electron cyclotron resonance deposition of amorphous silicon alloy films and devices: Final subcontract report, 1 April 1991–31 March 1992, 18:2919 (R;US)
Enhancement of 1,3-propanediol production by cofermentation in Escherichia coli expressing Klebsiella pneumoniae dha regulon genes, 18:2873 (RA;US)
Environmental influences on diethyl phthalate biodegradation kinetics, 18:4152 (RA;US)
Environmental, health, and safety issues of sodium-sulfur batteries for electric and hybrid vehicles: Volume 1, Cell and battery safety, 18:3556 (R;US)
Environmental, health, and safety issues of sodium-sulfur batteries for electric and hybrid vehicles: Volume 2, Battery recycling and disposal, 18:3475 (R;US)
Environmental, health, and safety issues of sodium-sulfur batteries for electric and hybrid vehicles: Volume 3, Transport of sodium-sulfur and sodium-metal-chloride batteries, 18:3476 (R;US)
Enzymatic saccharification of industrial and agricultural lignocellulosic wastes, 18:2896 (RA;US)
Ethanol, the ultimate feedstock: A technoeconomic evaluation of ethanol manufacture in fluidized bed bioreactors operating with immobilized cells, 18:2883 (RA;US)
Experimental analysis of a product inhibited fermentation in an aqueous two-phased system, 18:2884 (RA;US)
Fructose and fructose-anhydrides from Dahlia inulin, 18:4270 (RA;US)
FY 1991 Measurements and Characterization Branch annual report, 18:2920 (R;US)
Genetic engineering of microalgae for fuel production, 18:2877 (RA;US)
Growth characteristics of microalgae in high-concentration CO_2 gas, effects of culture medium trace components, and impurities thereon, 18:4111 (RA;US)
Hemicellulose bioconversion to polyanionic heteropolysaccharides, 18:2872 (RA;US)
Henry's law constant for environmentally significant compounds, 18:4377 (RA;US)
Immobilized cells of a unicellular green alga and a photosynthetic bacterium for use in a biophotolysis system, 18:2859 (RA;US)
Improvement of cellulase activity in Trichoderma, 18:4292 (RA;US)
Influence of ammonium chloride on growth and fatty acid production by Spirulina platensis, 18:4373 (RA;US)
Influence of hydrogen sulfide on the growth and metabolism of Butyribacterium methylotrophicum and Clostridium acetobutylicum, 18:4374 (RA;US)
Interactions of thiophenes and acidophilic, thermophilic bacteria, 18:2498 (RA;US)
Low-cost $CuInSe_2$ submodule development: Final subcontract report, 9 July 1990–31 January 1992, 18:2921 (R;US)
Mass-transfer and kinetic aspects in continuous bioreactors using Rhodospirillum rubrum, 18:2860 (RA;US)
Mathematical modeling of cellulose conversion to ethanol by the simultaneous saccharification and fermentation process, 18:2891 (RA;US)
Microbial stabilization of active-sulfide sludges, 18:4379 (RA;US)
Mixed- and plug-flow performances of an anaerobic biofilter treating 2-ethylhexanoic acid, 18:2902 (RA;US)
Mycelia-associated β-xylosidase in pellets of Aspergillus sps., 18:4268 (RA;US)
On fermentability of nafion catalyzed hemicellulose hydrolyzates, 18:2871 (RA;US)
On the use of enzyme adsorption and specific hydrolysis rate to characterize thermal-chemical pretreatment, 18:2866 (RA;US)
Optimal nutrient feed policies for heterologous protein production, 18:4265 (RA;US)
Optimization of large-scale chromatography for biotechnological applications, 18:4264 (RA;US)
Performance of microorganisms in spent sulfite liquor and enzymatic hydrolysate of steam-pretreated salix, 18:2880 (RA;US)
Photovoltaic manufacturing technology, Phase 1: Final technical report, 1 May 1991–10 May 1991, 18:2916 (R;US)
Photovoltaic Manufacturing Technology report, Phase 1: Final technical report, 9 January 1991–14 April 1991, 18:2917 (R;US)
Plant processing by simultaneous lactic acid fermentation and enzyme hydrolysis, 18:2876 (RA;US)
Plasmids from thermophilic Clostridia, 18:2882 (RA;US)

Preliminary estimate of the cost of ethanol production for SSF technology, 18:2897 (RA;US)
Preliminary studies on the processing sequence for southern red oak and municipal solid waste using a hybrid dilute acid/enzymatic hydrolysis process for ethanol production, 18:2898 (RA;US)
Pretreatment of lignocellulosic municipal solid waste by ammonia fiber explosion (AFEX), 18:2863 (RA;US)
Production of β-1,3-glucan exopolysaccharide in low shear systems: The requirement for high oxygen systems, 18:2895 (RA;US)
Properties of the seed gum of Stryphnodendron barbatiman (barbatimao), 18:2879 (RA;US)
Purification and characterization of a xylanase from the thermophilic ascomycete Thielavia terrestris 255B, 18:4267 (RA;US)
RD & D priorities for energy production and resource conservation from municipal solid waste, 18:3552 (R;US)
Recovery of cellulases after hydrolysis by adsorption on steam-pretreated willow, 18:2869 (RA;US)
Research on polycrystalline thin-film $CuGaInSe_2$ solar cells: Annual subcontract report, 3 May 1991–2 May 1992, 18:2922 (R;US)
Research on stable, high-efficiency amorphous silicon multijunction modules: Semiannual subcontract report, 1 January 1992–30 June 1992, 18:2918 (R;US)
Simulation and optimization of a cell recycle system, 18:2894 (RA;US)
Simulation of ethanol production processes based on enzymatic hydrolysis of lignocellulosic materials using ASPEN PLUS, 18:2868 (RA;US)
Simultaneous fermentation and separation of lactic acid in a biparticle fluidized-bed bioreactor, 18:2885 (RA;US)
Simultaneous saccharification and extractive fermentation for acetone/butanol production from pretreated hardwood, 18:2892 (RA;US)
Sorption of heavy metals by untreated red fir sawdust, 18:4226 (RA;US)
The anionic glycan from the cactus Cereus peruvianus, 18:4269 (RA;US)
The effect of lactic acid on fuel ethanol production by Zymomonas, 18:2875 (RA;US)
The effect of oxygenation on glucose fermentation with Pichia stipitis, 18:2881 (RA;US)
The influence of physical properties on the operation of a three-phase fluidized-bed fermentor with yeast cells immobilized in Ca-alginate, 18:2887 (RA;US)
The one-dimensional biocatalyst: A research tool for in situ analysis of immobilized-cell biocatalysts, 18:4273 (RA;US)
Thermal denaturation of Trichoderma reesei cellulases studied by differential scanning calorimetry and tryptophan fluorescence, 18:4266 (RA;US)
Tributyl phosphate degradation by immobilized cell of a Citrobacter sp., 18:4378 (RA;US)
Use of chemostat for enhanced production of β-glucosidase by newly isolated anaerobic cellulolytic Clostridium strain RT9, 18:4271 (RA;US)

National Research Council, Washington, DC (United States). Water Science and Technology Board
Water Science and Technology Board annual report, 1990, 18:4179 (R;US)

Naval Civil Engineering Lab., Port Hueneme, CA (United States). Dept. of Energy and Environment
Advanced Vortexing Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 1, 18:2578 (R;US)
Development of a Vortex Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 4, 18:2581 (R;US)
Development of a vortex combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 6, [1 February 1989–30 April 1989], 18:2582 (R;US)
Development of a vortexing combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 2, 1 February–30 April 1988, 18:2579 (R;US)
Development of a Vortexing Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 3, 18:2580 (R;US)

Naval Research Lab., Washington, DC (United States). E.O. Hulburt Center for Space Research
Atomic calculations for application to the diagnostics of tokamak plasmas: Final report, 18:4707 (R;US)

Nebraska Univ., Lincoln, NE (United States)
Mechanistic enzymology of CO dehydrogenase from Clostridium thermoaceticum: Progress report, August 15, 1993–March 24, 1995, 18:2904 (R;US)

Nebraska Univ., Lincoln, NE (United States). Dept. of Electrical Engineering
Progress report on conductive paints, August 3, 1992–September 30, 1992, 18:3645 (R;US)

Netherlands Energy Research Foundation (ECN), Petten (Netherlands)
Carrier-induced magnetic properties in small-gap semiconductors, 18:3653 (R;NL)
Characterization of energy conversion processes in the National Energy Outlooks 1990-2015, 18:3463 (R;NL;In Dutch)
CO_2 removal in competition with other options for reducing CO_2 emissions, 18:4126 (R;NL;In Dutch)
Current efficiency of Total Energy (TE) and Combined Heat and Power (CHP) systems, 18:3498 (R;NL;In Dutch)
Development of Solid Oxide Fuel Cell (SOFC): Third semi-annual progress report August 1991-January 1992, 18:3518 (R;NL)
Development of the IEC-standard for wind turbines: Report of the 1991 activities, 18:2959 (R;NL;In English, Dutch)
DIANA: An application of methods for diagnosis of continuous dynamic systems, 18:3542 (R;NL)
Fabrication and evaluation of small ($\approx$100W) SOFC (Solid Oxide Fuel Cell) reactors: Final report: Task 3.2. Preparation of ceramic bi-polar plates, 18:3519 (R;NL)
Manufacturing techniques for components of flat plate, solid oxide fuel cell (SOFC) reactors: First semi-annual progress report July 1991-December 1991, 18:3517 (R;NL)
National Energy Policy and Climate Change Prevention: The role of new energy technologies, 18:3471 (R;NL)
Reliability analysis methods for wind turbines: Task 1 of the project: Probabilistic safety assessment for wind turbines, 18:2958 (R;NL)
Revision of JEF-2 evaluations for the long-lived fission products ^{129}I and ^{99}Tc: Presented at the NEA Specialist' Meeting on Fission Product Nuclear Data, JAERI, Japan, 25-27 May 1992, 18:4612 (R;NL)
The defect chemistry of $LaMnO_{3\pm\delta}$: Part 3: The density of $(La,A)MnO_{3+\delta}$ (A=Ca,Sr,Ba), 18:3652 (R;NL)
The vibrational spectra of gaseous and liquid tetraethoxysilane, 18:3654 (R;NL)

A basis for standardized seismic design (SSD) for nuclear power plants, 18:3392 (RA;US)
A framework for the assessment of severe accident management strategies, 18:3364 (RA;US)
A model for calculation of RCS pressure during reflux boiling under reduced inventory conditions and its assessment against PKL data, 18:3383 (RA;US)
A performance indicator of the effectiveness of human-machine interfaces for nuclear power plants: Preliminary results, 18:3388 (RA;US)
A structured approach to individual plant evaluation and accident management, 18:3363 (RA;US)
Accident simulation and consequence analysis in support of MHTGR safety evaluations, 18:3375 (RA;US)
Accomplishments and prospects, 18:3319 (RA;US)
ACE project Phases C and D: ACE/MCCI and MACE tests, 18:3356 (RA;US)
Adiabatic equilibrium models for direct containment heating, 18:3347 (RA;US)
Aging assessment of BWR control rod drive systems, 18:3331 (RA;US)
Aging related degradation in turbine drives and governors for safety related pumps, 18:3333 (RA;US)
Aging studies of 1E power and reactor protection systems, and transformers, 18:3325 (RA;US)
Aging, condition monitoring, and loss-of-coolant accident (LOCA) tests of Class 1E electrical cables: Summary of results, 18:3334 (RA;US)
An approach for assessing ALWR passive safety system reliability, 18:3377 (RA;US)
Analyses of corium spreading in Mark I containment geometry, 18:3355 (RA;US)
Analysis of postulated events for the revised ALMR/PRISM design, 18:3374 (RA;US)
Applications and extensions of degradation modeling, 18:3330 (RA;US)
Assessment of two BWR accident management strategies, 18:3365 (RA;US)
Boiling jet modeling on IFCI - Preliminary report, 18:3346 (RA;US)
Calculation of fuel pin failure timing under LOCA conditions, 18:3360 (RA;US)
Comparisons between HDR-H_2-distribution experiments E11.2 and E11.4, 18:3349 (RA;US)
Containment performance experiments under severe accident loadings, 18:3369 (RA;US)
CORA experiments on the materials behavior of LWR fuel rod bundles at high temperatures, 18:3345 (RA;US)
Core-concrete interactions with overlying water pools, 18:3357 (RA;US)
Detecting and mitigating aging in component cooling water systems, 18:3327 (RA;US)
Effects of aging on calibration and response time of nuclear plant pressure transmitters, 18:3335 (RA;US)

Effects of hydrogen generation on severe accident natural circulation, 18:3384 (RA;US)
Enhancing the seismic margin review methodology to obtain risk insights, 18:3367 (RA;US)
Estimation of mechanical properties of cast stainless steels during thermal aging in LWR systems, 18:3321 (RA;US)
Expanding the modeling capabilities of the cognitive environment simulation, 18:3378 (RA;US)
Exploiting digital systems technology to improve nuclear safety, 18:3373 (RA;US)
Fatigue and environmentally assisted cracking in light water reactors, 18:3320 (RA;US)
Heavy-Section Steel Irradiation Program: Embrittlement issues, 18:3318 (RA;US)
Heavy-Section Steel Technology Program: Recent developments in crack initiation and arrest research, 18:3315 (RA;US)
High level seismic/vibrational tests at the HDR - An overview, 18:3370 (RA;US)
High-precision accelerator-mass-spectrometer radiocarbon dating of buried tidal-marsh soils - An approach to estimating the frequency and coastal extent of subduction zone earthquakes in Oregon and Washington, 18:3390 (RA;US)
Human Performance Investigation Process (HPIP), 18:3379 (RA;US)
Including test errors in evaluating surveillance test intervals, 18:3381 (RA;US)
Initial performance assessment of the Westinghouse AP600 containment design and related safety issues, 18:3376 (RA;US)
Integrated Level 3 risk assessment for the LaSalle Unit 2 Nuclear Power Plant, 18:3339 (RA;US)
Intersystem LOCA risk assessment: Methodology and results, 18:3341 (RA;US)
Iodine chemical forms in LWR severe accidents, 18:3359 (RA;US)
Large-Scale Seismic Test Program at Hualien, Taiwan, 18:3368 (RA;US)
Liquefaction induced by modern earthquakes as a key to paleoseismicity: A case study of the 1988 Saguenay event, 18:3389 (RA;US)
Main safety issues related to IPSN severe accident research, 18:3353 (RA;US)
Managing water addition to a degraded core, 18:3361 (RA;US)
Mechanical-property degradation of cast stainless steel components from the Shippingport reactor, 18:3322 (RA;US)
MELCOR peer review, 18:3342 (RA;US)
Most likely failure location during severe accident conditions, 18:3350 (RA;US)
New containment modeling features of the CONTAIN code, 18:3344 (RA;US)
New method for detecting degradation in installed cables in nuclear power plants, 18:3326 (RA;US)
NRC test results and operations experience provide insights for a new gate valve stem force correlation, 18:3329 (RA;US)
On the prediction of steam explosions energetics, 18:3351 (RA;US)
Organizational factors influencing improvements in safety, 18:3380 (RA;US)
Parameter effects on molten debris spreading and coolability, 18:3354 (RA;US)
Pipe fracture behavior under high-rate (seismic) loading - The IPIRG program, 18:3316 (RA;US)
Planned MELCOR improvements and assessment, 18:3343 (RA;US)
Post-test-analysis and nodalization studies of OECD LOFT experiment LP-LB-1 with RELAP5/Mod2 cy36-02, 18:3439 (R;US)
Preliminary results of the PWR low power and shutdown accident frequencies program - Coarse screening analysis for Surry, 18:3337 (RA;US)
Progress in evaluation and improvement in nondestructive examination reliability for inservice inspection of light water reactors (LWRs) and characterizing fabrication flaws in reactor pressure vessels, 18:3323 (RA;US)
Progress in research on aging of structures, 18:3371 (RA;US)
Recent development and results from severe accident research in Japan, 18:3352 (RA;US)
Results of recent NUPEC hydrogen related tests, 18:3348 (RA;US)
Risk-based performance indicators, 18:3340 (RA;US)
Scaling issues for a thermal-hydraulic integral test facility, 18:3385 (RA;US)
Short cracks in piping and piping welds, 18:3317 (RA;US)
Small break LOCA RELAP5/MOD3 uncertainty quantification: Bias and uncertainty evaluation for important phenomena, 18:3386 (RA;US)
Snubber aging assessment: Results of NPAR Phase 2 in-plant research, 18:3336 (RA;US)
Soil/structure interactions of eastern US type earthquakes, 18:3391 (RA;US)
Status of the low power and shutdown accident sequence analysis project for the Grand Gulf Nuclear Power Station, 18:3338 (RA;US)
Studies performed in support of the proposed revision of engineering design aspects of 10CFR100, Appendix A, 18:3366 (RA;US)
Tests in the ATLE loop on the PIUS design, 18:3372 (RA;US)
The effect of aging upon CE and B and W control rod drives, 18:3332 (RA;US)
The effects of aging on friction of MOVs, 18:3328 (RA;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 18:3358 (RA;US)
Universal treatment of plumes and stresses for pressurized thermal shock evaluations, 18:3387 (RA;US)
US nuclear industry approach to severe accident management guidance development and implementation, 18:3362 (RA;US)
Validation and transfer of advanced NDE technologies, 18:3324 (RA;US)
Verification and validation of expert systems, 18:3382 (RA;US)

Mechanisms for radiation damage in DNA: Progress report, June 1, 1992–May 31, 1993, 18:4324 (R;US)

Ogden Environmental and Energy Services, Knoxville, TN (United States)
Final geotechnical study, DARA Solid Storage Facility, Y-12 Bear Creek Burial Grounds, Oak Ridge, Tennessee: Environmental Restoration Program, 18:2806 (R;US)

Ohio Power Co., Columbus, OH (United States)
Second year operation of the Tidd PFBC Demonstration Plant, 18:2575 (R;US)

Ohio State Univ. Research Foundation, Columbus, OH (United States)
[Strongly interacting fermion systems] annual progress report, November 15, 1992–November 14, 1993, 18:4690 (R;US)

Ohio State Univ., Columbus, OH (United States)
Optical and magnetic signatures of localized excitations in polyaniline, 18:3649 (R;US)
Reduction of pumping energy losses in district heating and cooling systems: Final report, 18:3550 (R;US)

Ohio State Univ., Columbus, OH (United States). Dept. of Chemistry
Extraction, separation, and analysis of high sulfur coal: Final report, 18:2495 (R;US)

Ohio State Univ., Columbus, OH (United States). Dept. of Physics
Research in elementary particle physics: Annual report, January 1–October 31, 1992, 18:4477 (R;US)

Oldenburg Univ. (Germany). Inst. fuer Volkswirtschaftslehre (VWL)
The oil market at the beginning of the nineties, 18:3504 (I;DE;In German)

Oregon Graduate Inst. of Science and Technology, Beaverton, OR (United States). Dept. of Materials Science and Engineering
Quantitative measurement and modeling of sensitization development in stainless steel, 18:3603 (R;US)

P

Pacific Northwest Lab., Richland, WA (United States)
A comparison of surface topography characterization technologies for use in comparing spent bullet and cartridge case signatures, 18:4053 (R;US)
An evaluation of slug interference tests for aquifer characterization at the Hanford Site, 18:2823 (R;US)
An integrated mission planning approach for the Space Exploration Initiative, 18:3031 (R;US)
Analysis of an analytical technique for distributing air sampling locations around nuclear facilities, 18:4109 (R;US)
Auxiliary feedwater system risk-based inspection guide for the Maine Yankee Nuclear Power Plant, 18:3435 (R;US)
Auxiliary feedwater system risk-based inspection guide for the North Anna nuclear power plants, 18:3436 (R;US)
Auxiliary feedwater system risk-based inspection guide for the Virgil C. Summer Nuclear Power Plant, 18:3017 (R;US)
Basin meteorology, with examples from the American Southwest (Grand Canyon region) in winter, 18:4141 (R;US)
BEATRIX-II: In situ tritium recovery from Li_2O and Li_2ZrO_3 irradiated in a fast neutron flux, 18:4753 (R;US)
Commercial production and distribution of fresh fruits and vegetables: A scoping study on the importance of produce pathways to dose: Hanford Environmental Dose Reconstruction Project, 18:4366 (R;US)
Declassifications requested by the Technical Steering Panel of Hanford documents produced 1944–1960: Hanford Environmental Dose Reconstruction Project, 18:4368 (R;US)
Detection of organic sulfur by ^{15}N and ^{19}F NMR via formation of iminosulfuranes, 18:3774 (R;US)
Development of simulated tank wastes for the US Department of Energy's Underground Storage Tank Integrated Demonstration, 18:2772 (R;US)
Dynamic response testing of the "North Wind 100" Wind Turbine Generator: Final report, 18:2949 (R;US)
Ecological evaluation of proposed discharge of dredged material from Oakland Harbor into ocean waters (Phase 3 A of -42-foot project): Volume 1, Analyses and discussion, 18:4425 (R;US)
Ecological evaluation of proposed discharge of dredged material from Oakland Harbor into ocean waters (Phase 3 A of -42-foot project): Volume 2, Appendixes, 18:4426 (R;US)
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction, 18:3815 (R;US)
Effects of mesoscale surface inhomogeneities on atmospheric boundary layer transfer, 18:4144 (R;US)
Emergency feedwater system risk-based inspection guide for the Arkansas Nuclear One Unit 2 Power Plant, 18:3016 (R;US)
Evaluation of Machine Guarding course taught in Chicago, Illinois June 2, 1992–June 4, 1992, 18:3923 (R;US)
Evaluation of Machine Guarding pilot course taught in Idaho Falls, Idaho, June 23, 1992–June 25, 1992, 18:4433 (R;US)
Evaluation of S-101 course "Supervisors' Orientation to Occupational Safety in DOE" taught in Stanford, California, July 28, 1992–July 31, 1992, 18:3973 (R;US)
Evaluation of S-101 course "Supervisors' Orientation to Occupational Safety in DOE" taught in Idaho Falls, Idaho, June 23, 1992–June 26, 1992, 18:2845 (R;US)
Expected benefits of federally-funded thermal energy storage research, 18:3502 (R;US)

Field study of energy-efficient showerheads, 18:3531 (R;US)
Final report on the PNL program to develop an alumina sensor: Sensors Development Program, 18:3545 (R;US)
H_2OTREAT: An acid for evaluating water treatment requirements for Aquifer Thermal Energy Storage, 18:3451 (R;US)
Hanford Site environmental data for calendar year 1991: Surface and Columbia River, 18:4140 (R;US)
Implications for education and training programs of the ER/WM workforce assessment, 18:4764 (R;US)
Initiating continuing improvement within Greenfield sites: A federal remanufacturing facility case study, 18:3547 (R;US)
Innovative technology demonstrations, 18:4208 (R;US)
Integrated Task Plans for the Hanford Environmental Dose Reconstruction Project, FY 1992 through May 1994, 18:4364 (R;US)
Internal gravity waves in the equatorial Pacific, 18:4252 (R;US)
Ion-beam modification of $Gd_2Ti_2O_7$, 18:3640 (R;US)
Kinetics of in situ bioremediation of Hanford groundwater, 18:2846 (R;US)
Pacific Northwest Laboratory ALARA report for CY 1991, 18:2844 (R;US)
Parameters used in the environmental pathways (DESCARTES) and radiological dose (CIDER) modules of the Hanford Environmental Dose Reconstruction Integrated Codes (HEDRIC) for the air pathway: Hanford Environmental Dose Reconstruction Project, 18:4367 (R;US)
Planning and managing distributed computing resources, 18:4815 (R;US)
Pull remanufacturing: A case study, 18:3546 (R;US)
Pull-production in repetitive remanufacturing, 18:3548 (R;US)
Residual radioactive contamination from decommissioning: Technical basis for translating contamination levels to annual total effective dose equivalent: Final report: Volume 1, 18:4361 (R;US)
Retrieval technology development for Hanford double-shell tanks, 18:2771 (R;US)
Sampling and analysis of sediments in dredged material from Wilma Uplands Disposal Site, 18:4207 (R;US)
Scoping assessment of radiological doses to aquatic organisms and wildlife – N Springs, 18:4363 (R;US)
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation, 18:4143 (R;US)
Tech transfer outreach: An informal proceedings of the first technology transfer/communications conference, 18:3483 (R;US)
The coupling of synoptic and valley winds in the Tennessee Valley, 18:2947 (R;US)
The Hybrid Treatment Process for mixed radioactive and hazardous waste treatment, 18:2773 (R;US)
Well, hydrology, and geochemistry problems encountered in ATES systems and their solutions, 18:3452 (R;US)
Wintertime meteorology of the Grand Canyon region, 18:4142 (R;US)

Pacific Wind Energy, Corvallis, OR (United States)
Cooperative field test program for wind energy systems: Effects of precipitation on wind turbine performance: Detailed test plan and quality assurance plan, 18:2948 (R;US)

PAR Enterprises, Inc., Clifton, VA (United States)
Directory of Federal Agencies and University Research Centers conducting R&D in Environmental and Waste Management, 18:3480 (R;US)

Paul Scherrer Inst. (PSI), Villigen (Switzerland)
Post-test-analysis and nodalization studies of OECD LOFT experiment LP-LB-1 with RELAP5/Mod2 cy36-02, 18:3439 (R;US)

Pennsylvania State Univ., University Park, PA (United States)
Development of a scintillating fiber tracker for the SSC: Final technical report, July 1, 1991–June 30, 1992, 18:4027 (R;US)
Fundamental studies of passivity and passivity breakdown, 18:3821 (R;US)
Relativistic calculations of excitation and ionization of highly charged ions by electron impact: Final technical report, 18:4664 (R;US)
[Transition metal mediated transformations of small molecules]: Progress report, 18:3778 (R;US)

Pennsylvania State Univ., University Park, PA (United States). Dept. of Chemistry
Highly nucleophilic acetylide, vinyl, and vinylidene complexes: Progress report, 18:3780 (R;US)
Radon: Chemical and physical processes associated with its distribution: Annual progress report, 18:4327 (R;US)

Pennsylvania State Univ., University Park, PA (United States). Materials Research Lab.
Multifunctional nanocomposite materials: Progress report, 18:3646 (R;US)
Twin boundaries, interfaces and modulated structures in martensites: Final report, 18:3577 (R;US)

Pennsylvania Univ., Philadelphia, PA (United States). Dept. of Chemical Engineering
Thermodynamics and transport in microporous media: Progress report, 18:3787 (R;US)

Pennsylvania Univ., Philadelphia, PA (United States). Dept. of Chemistry
Molecular and polymeric ceramic precursors: Research progress report, 18:3617 (R;US)

Pennsylvania Univ., Philadelphia, PA (United States). Dept. of Materials Science and Engineering
Atomistic studies of grain boundaries in alloys and compounds: Progress report, July 1990–October 1992, 18:3580 (R;US)

Physical Sciences, Inc., Andover, MA (United States)
Final executive summary for Vibronic Exchange Visible Laser Program, 18:3955 (R;US)

Physikalisch-Technische Bundesanstalt, Braunschweig (Germany). Radioaktivitaet
Radionuclide concentration in ground-level air in 1991 in North Germany, 18:4145 (R;DE)

PIPco, Inc., Southport, CT (United States)
System for recovering sulfur from gases, especially natural gas: Final report, February 1991–July 1992, 18:2626 (R;US)

Pittsburgh Univ., PA (United States)
[Studies of supported hydrodesulfurization catalysis]: Progress report, 18:3786 (R;US)

Politecnico di Milano, Milan (Italy)
Mechanistic study of poisoning of DeNoxING catalysts by alcali metals, 18:2976 (R;IT)

Politecnico di Milano, Milan (Italy). Ist. di Ingegneria Nucleare
Dry active waste incineration by electric heating: ENEL pilot plant performance, 18:2742 (R;IT;In Italian)

Pontificia Univ. Catolica do Rio de Janeiro, RJ (Brazil). Dept. de Ciencia dos Materiais e Metalurgia
Continuous precipitation of uranium peroxide in process pilot plant, 18:2655 (I;BR;In Portuguese)

Pontificia Univ. Catolica do Rio de Janeiro, RJ (Brazil). Dept. de Fisica
Estimative of alpha radiation dose due to natural concentration of Ra-226 in waters from Pocos de Caldas, 18:4243 (I;BR;In Portuguese)

Pontificia Univ. Catolica do Rio de Janeiro, RJ (Brazil). Dept. de Quimica
Thorium determination in water and biological materials by fission track, 18:3756 (I;BR;In Portuguese)

Portsmouth Gaseous Diffusion Plant, OH (United States)
Integrated waste storage plan, 18:2774 (R;US)

Princeton Univ., NJ (United States)
High energy physics research: Technical progress report, 18:4472 (R;US)

Princeton Univ., NJ (United States). Plasma Physics Lab.
Electron ripple injection concept for transport control, 18:4731 (R;US)
Emissive limiter bias experiment for improved confinement of tokamaks, 18:4732 (R;US)
Novel current drive experiments on the CDX-U, HIT, and DIII-D Tokamaks, 18:4730 (R;US)
Particle balance in a TFTR supershot, 18:4727 (R;US)
The relationship between turbulence measurements and transport in different heating regimes in TFTR, 18:4729 (R;US)
Transport of energetic ions by low-n magnetic perturbations, 18:4728 (R;US)

Princeton Univ., NJ (United States). School of Engineering
Investigation of dispersion in porous media using fiber-optic technology, 18:3940 (R;US)

Purdue Univ., Lafayette, IN (United States). Dept. of Chemistry
Preconversion catalytic deoxygenation of phenolic functional groups: Quarterly technical progress report, April 1, 1992–June 30, 1992, 18:2518 (R;US)
Purdue Univ., Lafayette, IN (United States). Dept. of Physics
The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV $\bar{p}p$ collisions; and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions: Progress report, January 1, 1992–December 31, 1992, 18:4544 (R;US)

Q

Queen's Univ., Belfast, Northern Ireland (United Kingdom)
Wells turbine pneumatic power conversion systems for river and tidal applications, 18:2909 (R;GB)

R

Research Communications Ltd., Dedham, MA (United States)
Impact of the FUTURES series: Executive summary, 18:4760 (R;US)
Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (United States)
A simulation of the transport and fate of radon-220 derived from thorium-232 low-level waste in the near-surface zone of the Radioactive Waste Management Site in Area 5 of the Nevada Test Site, 18:2733 (R;US)
CASCADER: An m-chain gas-phase radionuclide transport and fate model: Volume 1, Basic physics and mathematics, 18:4183 (R;US)
Operational air sampling report, July–December 1991, 18:4123 (R;US)
Operational air sampling report, January–June 30, 1992, 18:4124 (R;US)
Rice Univ., Houston, TX (United States). Dept. of Chemical Engineering
Coal combustion: Effect of process conditions on char reactivity: Fourth quarterly technical report, June 1, 1992–September 1, 1992, 18:2592 (R;US)
Rio Grande do Sul Univ., Porto Alegre, RS (Brazil). Escola de Engenharia
Study on transient of fluidized bed nuclear reactor, 18:3027 (I;BR;In Portuguese)
Risoe National Lab., Roskilde (Denmark)
Inspection scheme, 18:3263 (RA;XA)
Irradiation in DR 3 of three Danish manufactured LEU silicide test fuel elements, 18:3256 (RA;XA)
Specifications, 18:3262 (RA;XA)
Rochester Univ., NY (United States)
Low energy ion-molecule reactions and chemiionization kinetics: Progress report, February 1, 1992–January 31, 1993, 18:3788 (R;US)
Rochester Univ., NY (United States). Dept. of Physics and Astronomy
Flux flow, pinning, and resistive behavior in superconducting networks: Annual progress report, May 1, 1992–April 30, 1993, 18:3618 (R;US)
Rockefeller Univ., New York, NY (United States)
Experimental studies of elementary particle interactions at high energies: Technical progress report, 18:4546 (R;US)
[Research programs on elementary particle and field theories and superconductivity]: Technical progress report, June 1, 1991–October 1, 1992, 18:4470 (R;US)

Multi-body forces and the energetics of transition metals, alloys, and semiconductors: Annual progress report, (1991–1992), 18:3576 (R;US)

West Virginia Univ., Morgantown, WV (United States). Dept. of Mechanical and Aerospace Engineering
Experimental study of the hydrodynamics and cluster formation in a Circulating Fluidized Bed: Annual report, 1990, 18:2576 (R;US)

West Virginia Univ., Morgantown, WV (United States). Dept. of Statistics and Computer Science
ISPE: A knowledge-based system for fluidization studies: 1990 Annual report, 18:4783 (R;US)

Western Research Inst., Laramie, WY (United States)
The use of solid-state NMR techniques for the analysis of water in coal and the effect of different coal drying techniques on the structure and reactivity of coal: Quarterly report, June 1, 1992–August 31, 1992, 18:2566 (R;US)

Westinghouse Electric Corp., Idaho Falls, ID (United States)
1991 environmental monitoring report for the Naval Reactors Facility, 18:4238 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (United States). Advanced Energy Systems Div.
The dynamic loads tests of the Westinghouse 600 kW wind turbine, 18:2957 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (United States). Science and Technology Center
Design, fabrication and testing of a solid oxide fuel cell stack for a 25 kW to 200 kW generator: Volume 1, Executive summary; Volume 2, Final report: March 1986–December 1990, 18:3511 (R;US)

Westinghouse Hanford Co., Richland, WA (United States)
A facility for testing 10- to 100-kWe space power reactors, 18:3293 (R;US)
A shielded storage and processing facility for radioisotope thermoelectric generator heat source production, 18:3510 (R;US)
An approach to documenting vulnerability assessments, 18:2851 (R;US)
Environmental radiological survey summary, 100, 200, 300, and 600 Areas: Third quarter 1991, 18:2793 (R;US)
Hanford Waste Vitrification Plant Quality Assurance Program description: Overview and applications: Revision 2, Part 1, 18:2788 (R;US)
Maintenance Implementation Plan for the 222-S Laboratory, 18:3930 (R;US)

Meeting the challenge of responding to stakeholder information needs: A program model, 18:4835 (R;US)
Mitigation/remediation concepts for Hanford Site flammable gas generating waste tanks, 18:2789 (R;US)
MOCAL, a Monte Carlo albedo code, 18:4605 (R;US)
Quarterly environmental radiological survey summary: Fourth quarter 1991, 100, 200, 300 and 600 areas, 18:2794 (R;US)
Quarterly environmental radiological survey summary: First quarter, 1992, 100, 200, 300, and 600 Areas, 18:2795 (R;US)
Radionuclide air emissions report for the Hanford Site: Calendar year 1991, 18:2814 (R;US)
Status of birds at the Hanford Site in southeastern Washington: Revision 1, 18:2824 (R;US)
Tank farm surveillance and waste status summary report for March 1992, 18:2785 (R;US)
Tank Farm surveillance and waste status summary report for May 1992, 18:2786 (R;US)
Tank Farm surveillance and waste status summary report for June 1992, 18:2787 (R;US)
The distillation and incineration of 132,000 liters (35,000 gallons) of mixed-waste hexone solvents from Hanford's REDOX Plant, 18:2791 (R;US)
Upgrade activities for the Criticality Safety Program of Hanford High-Level Radioactive Waste Tank Farm, 18:2790 (R;US)
Westinghouse Hanford Company environmental surveillance annual report: Calendar year 1991, 18:4212 (R;US)
Westinghouse Hanford Company plan for certifying newly generated contact-handled transuranic waste for emplacement in the Waste Isolation Pilot Plant, 18:2792 (R;US)

Westinghouse Idaho Nuclear Co., Inc., Idaho Falls, ID (United States)
Sequential extraction evaluation of soil washing for radioactive contamination, 18:4213 (R;US)
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems, 18:3820 (R;US)

Westinghouse Savannah River Co., Aiken, SC (United States)
Catwalk grate lifting tool, 18:3921 (PA;US)
Cesium in the Savannah River Site environment, 18:4217 (R;US)
Core melt progression and consequence analysis methodology development in support of the Savannah River Reactor PSA, 18:3446 (R;US)
Deer monitoring at the Savannah River Site, 18:4372 (R;US)
Delineate subsurface structures with ground penetrating radar, 18:4215 (R;US)
Development of glass vitrification at SRL as a waste treatment technique for nuclear weapon components, 18:2796 (R;US)
Documentation of toxicity testing results on increased supernate treatment rate of 2700 gallons/batch: Revision 1, 18:2820 (R;US)
DWPF ammonium ion analysis, 18:3775 (R;US)
Effect of oxide particle distribution on the helium-induced fracture of copper, 18:3609 (R;US)
Environmental Restoration Program Control Management System, 18:2847 (R;US)
Evaluation of the DWPF chemical process cell sample condenser in the integrated DWPF melter system, 18:2805 (R;US)
FB-Line resin testing final report, 18:2696 (R;US)
Fluid flow monitoring device, 18:3054 (PA;US)
Groundwater quality assessment/corrective action feasibility plan: Savannah River Laboratory Seepage Basins, 18:4216 (R;US)
Heavy rainfall at the SRS in July, August and October of 1990, 18:4148 (R;US)
High frequency reference electrode, 18:3823 (PA;US)
Ichthyoplankton entrainment study at the SRS Savannah River water intakes for Westinghouse Savannah River Company: Final report, 18:4260 (R;US)
Integrated DWPF Melter System (IDMS) campaign report: The first two noble metals operations, 18:2802 (R;US)
Measured leak rates of the temporary seals in DWPF canistered waste forms after three years of on site storage, 18:2803 (R;US)
Method of calculation of heat generation rates for DWPF glass: Revision 1, 18:2800 (R;US)
Optical transcutaneous bilirubin detector, 18:4051 (PA;US)
Overview of a conceptualized waste water treatment facility for the Consolidated Incinerator Facility, 18:2801 (R;US)
Radioactive demonstration of DWPF product control strategy, 18:2804 (R;US)
Relative yields of U-235 fission products measured in a high level radioactive sludge at Savannah River Site, 18:2797 (R;US)
Relay extracting tool, 18:3957 (PA;US)
Resistance upset welding for vessel fabrication, 18:3056 (R;US)
Results of the F/H Effluent Treatment Facility biological monitoring program, July 1987–July 1991, 18:4428 (R;US)
Review of the Savannah River Site K-Reactor draft technical specifications, 18:3445 (R;US)
Savannah River Site Environmental Report for 1990: Summary pamphlet, 18:4214 (R;US)
Sequential power-up circuit, 18:3963 (PA;US)
Simulant composition for the Mixed Waste Management Facility (MWMF) groundwater remediation project, 18:2825 (R;US)
Specialized video systems for use in waste tanks: Revision 1, 18:2798 (R;US)
Telerobot tool maintenance using master-slave manipulators, 18:3932 (R;US)
The WSRC Engineering Analyzer: Revision 1, 18:3931 (R;US)
Thermal manipulator of medical catheters, 18:4291 (PA;US)
Tritium uptake by fish in a small stream: Revision 1, 18:4261 (R;US)
Vegetation survey of Pen Branch and Four Mile Creek wetlands, 18:4218 (R;US)
Vitrification of hazardous and mixed wastes, 18:2799 (R;US)

Wisconsin Univ., Madison, WI (United States)
ARM Fourier transform spectrometer data analysis tools, 18:4120 (R;US)
Development of phosphate-based ceramic membranes: Final report, 18:3670 (R;US)
Long wavelength magnetic fluctuations in toroidal plasmas, 18:4737 (R;US)
Organometallic chemistry of bimetallic compounds: [Annual report], 18:3781 (R;US)
Theoretical reversed field pinch and tokamak studies: Progress report, November 1, 1991–June 15, 1992, 18:4709 (R;US)

Wisconsin Univ., Madison, WI (United States). Applied Superconductivity Center
High field superconductor development and understanding: A. Establishing the limits of performance of niobium-titanium; B. Establishing whether Chevrel phase materials could become useful high field superconductors: Final report, 18:4689 (R;US)

Wisconsin Univ., Madison, WI (United States). Dept. of Medical Physics
Fast neutron dosimetry: Progress report, 1 July 1991–1 September 1992, 18:4323 (R;US)

Wisconsin Univ., Madison, WI (United States). Fusion Technology Inst.
Tokamak reactor systems studies: Progress report, November 1, 1991–October 31, 1992, 18:4744 (R;US)

Y

Yale Univ., New Haven, CT (United States). High Temperature Chemical Reaction Engineering Lab.
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly report No. 9, September 1, 1988–November 30, 1988, 18:2589 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 10, December 1, 1988–February 28, 1989, 18:2590 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 11, March 1, 1989–May 31, 1989, 18:2591 (R;US)
Research on thermophoretic and inertial aspects of the ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report, September 1, 1986–November 30, 1986, 18:2585 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment:

Quarterly techical report, December 1, 1986–February 28, 1987, 18:2586 (R;US)

Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 3, March 1, 1987–May 31, 1987, 18:2587 (R;US)

Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 6, December 1, 1987–February 28, 1988, 18:2588 (R;US)

Z

Zentralinstitut fuer Kernforschung, Rossendorf (Germany)

Zespol Prezesa Panstwowej Agencji Atomistyki do Spraw Elektrowni Jadrowej Zarnowiec, Warsaw (Poland)

Report concerning Zarnowiec nuclear power plant, 18:3007 (I;PL;In Polish)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, ETDE/PUB–2, *International Energy: Subject Thesaurus*. In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

Niagara Falls Storage Site annual environmental report for calendar year 1991, Lewiston, New York, 18:2834 (R;US)
Operational air sampling report, January–June 30, 1992, 18:4124 (R;US)
Operational air sampling report, July–December 1991, 18:4123 (R;US)
Parameters used in the environmental pathways (DESCARTES) and radiological dose (CIDER) modules of the Hanford Environmental Dose Reconstruction Integrated Codes (HEDRIC) for the air pathway: Hanford Environmental Dose Reconstruction Project, 18:4367 (R;US)
The communications in early warning network for radiation monitoring, 18:4104 (R;SY;In Arabic)
Wayne Interim Storage Site annual environmental report for calendar year 1991, Wayne, New Jersey: Formerly Utilized Sites Remedial Action Program (FUSRAP) (Wayne Interim Storage Site), 18:2836 (R;US)

AIR CONDITIONERS
Alternative non-CFC mobile air conditioning, 18:3534 (R;US)

AIR FLOW
Air flow modelling of the Gateway II atrium building, 18:2942 (R;GB)
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation, 18:4143 (R;US)

AIR POLLUTION
Air-Biosphere Interactions
Histological and cytological differences between needles of healthy and damaged spruces at two sites in North-Rhine Westphalia, Germany. Final report, 18:4386 (I;DE;In German)

Allergy
Influence of air pollution on the airways of children. Summary of effects of air pollutants and positive predictive analyses of skin sensibilisation, 18:4432 (RA;DE;In German)

Annual Variations
Immission measurements at Schoellkopf near Freudenstadt, 18:4389 (RA;DE;In German)

Biological Effects
Biochemical and physiological investigations to detect effects of air pollutants on spruce in open-top-chambers, 18:4409 (RA;DE;In German)
Ecophysiological measurements on pollutant stressed trees - OTC Edelmannshof, 18:4407 (RA;DE;In German)
Open top chamber experiment 'Edelmannshof': Determination of biochemical parameters in needles of Norway spruce fumigated with unfiltered or charcoal-filtered air in comparison to untreated trees, 18:4408 (RA;DE;In German)
Statistical analysis of the physiological and biochemical data from the PEF research groups, 18:4405 (RA;DE;In German)

Biological Indicators
Detection of damages of trees with time resolved luminescence, 18:4394 (RA;DE;In German)

Chlorophyll
Physiological and biochemical investigations into the yellowing of spruce at higher altitudes. Pt. 4. Stability of the light-harvesting chlorophyll-a/b-protein, pigment content, activity of the xanthophyll cycle, and the sensitizing role of chlorophyll, 18:4390 (RA;DE;In German)

Daily Variations
Immission measurements at Schoellkopf near Freudenstadt, 18:4389 (RA;DE;In German)

Dose-Response Relationships
Histological and cytological differences between needles of healthy and damaged spruces at two sites in North-Rhine Westphalia, Germany. Final report, 18:4386 (I;DE;In German)

Environmental Effects
7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe, 18:4387 (R;DE;In German)

Enzyme Activity
Biochemical and physiological investigations to detect effects of air pollutants on spruce in open-top-chambers, 18:4409 (RA;DE;In German)

Leaves
Biochemical and physiological investigations to detect effects of air pollutants on spruce in open-top-chambers, 18:4409 (RA;DE;In German)

Maximum Permissible Concentration
Effects of outdoor and indoor air pollution on lung function, bronchial hyperreactivity, risk of pulmonary disease and course of disease, 18:4412 (RA;DE;In German)

Photosynthesis
Ecophysiological measurements on pollutant stressed trees - OTC Edelmannshof, 18:4407 (RA;DE;In German)

Plant Growth
7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe, 18:4387 (R;DE;In German)

Pollution Sources
Study of the atmospheric aerosol composition in Zaire using nuclear and nuclear related techniques, 18:3701 (RA;XA)

Regulations
Global environmental security: Research and policy strategies for the 1990s, 18:4106 (R;US)

Respiratory System Diseases
Effects of outdoor and indoor air pollution on lung function, bronchial hyperreactivity, risk of pulmonary disease and course of disease, 18:4412 (RA;DE;In German)
First annual report of the project 'Environment and health' on March 18 and 19, 1992, Nuclear Research Center Karlsruhe, 18:4411 (R;DE;In German)
Influence of air pollution on the airways of children. Summary of effects of air pollutants and positive predictive analyses of skin sensibilisation, 18:4432 (RA;DE;In German)

Seasonal Variations
Immission measurements at Schoellkopf near Freudenstadt, 18:4389 (RA;DE;In German)

Soils
7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe, 18:4387 (R;DE;In German)

Spruces
Ecophysiological measurements on pollutant stressed trees - OTC Edelmannshof, 18:4407 (RA;DE;In German)
Open top chamber experiment 'Edelmannshof': Determination of biochemical parameters in needles of Norway spruce fumigated with unfiltered or charcoal-filtered air in comparison to untreated trees, 18:4408 (RA;DE;In German)

Stagnation
Single-station integral measures of atmospheric stagnation, ventilation, and recirculation, 18:4143 (R;US)

Statistical Data
Efficient strategies for air pollution control in Baden-Wuerttemberg, 18:4134 (RA;DE;In German)

Statistics
Statistical analysis of the physiological and biochemical data from the PEF research groups, 18:4405 (RA;DE;In German)

Trees
7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe, 18:4387 (R;DE;In German)

AIR POLLUTION ABATEMENT
CO_2 removal in competition with other options for reducing CO_2 emissions, 18:4126 (R;NL;In Dutch)
Development of a decision support system for emission reduction and emission control technologies, 18:4136 (R;DE;In German)
Efficient strategies for air pollution control in Baden-Wuerttemberg, 18:4134 (RA;DE;In German)
National Energy Policy and Climate Change Prevention: The role of new energy technologies, 18:3471 (R;NL)
PETC Review, Issue 6, Summer 1992, 18:2494 (R;US)

AIR POLLUTION CONTROL
Development of a decision support system for emission reduction and emission control technologies, 18:4136 (R;DE;In German)

AIR POLLUTION MONITORING
Experiment with exclusion of gaseous pollutants on spruce trees at Edelmannshof. Pt. A. Chamber operation (results of investigation on climate and air chemistry), 18:4135 (RA;DE;In German)
Immission measurements at Schoellkopf near Freudenstadt, 18:4389 (RA;DE;In German)

AIR QUALITY
AQUIS: A PC-based air quality and permit information system, 18:4105 (R;US)

AIR-BIOSPHERE INTERACTIONS
CO_2-gas-exchange and transpiration of open grown Norway spruce during the year in higher elevations of the Southern Black Forest under local air conditions with and without O_3 respectively, 18:4388 (RA;DE;In German)

A two-phase method to produce gel beads: Application in the design of a whole cell β-galactosidase catalyst, 18:4272 (RA;US)
An allylic formate ester analogue of retinal as an affinity label for bacteriorhodopsin, 18:2931 (RA;US)
Hemicellulose bioconversion to polyanionic heteropolysaccharides, 18:2872 (RA;US)
Influence of hydrogen sulfide on the growth and metabolism of Butyribacterium methylotrophicum and Clostridium acetobutylicum, 18:4374 (RA;US)
Production of β-1,3-glucan exopolysaccharide in low shear systems: The requirement for high oxygen systems, 18:2895 (RA;US)

BAG MODEL
About chiral models of dense matter and its magnetic properties, 18:4520 (R;PL;In Polish)

BAKELITE
Determination of neutron double differential cross-section for calcined bakelite, 18:3751 (IA;BR)

BANGLADESH
Monitoring of heavy metal pollutants in air particulates in Bangladesh, 18:3717 (RA;XA)
BARIUM OXIDES
Flux pinning by 211 precipitates in melt-processed $YBa_2Cu_3O_x$, 18:3612 (R;US)
Properties of aligned $YBa_2Cu_3O_{7-\delta}$ superconductor as a function of oxygen deficiency δ, 18:3614 (R;US)
BARLEY
Dinitrogen fixation estimates in vetch-barley swards using ^{15}N methodology, 18:4294 (R;SY;In Arabic)
The effect of irradiation of barley seeds with low doses on the increase of their resistance to salinity during germination period, 18:4293 (R;SY;In Arabic)
BARYON RESONANCES
See BARYONS
BARYON-BARYON INTERACTIONS
See also NUCLEON-NUCLEON INTERACTIONS
A constituent quark model with colour degrees of freedom confronts the data on hadron-nucleus interactions, 18:4550 (R;PL)
BARYONS
Baryon asymmetry from Planck-scale physics, 18:4488 (R;US)
Covariant Bethe-Salpeter wave functions for heavy hadrons, 18:4569 (R;XA)
What do we know about the Q^2 evolution of the Gerasimov-Drell-Hearn sum rule?, 18:4566 (R;US)
BASALT
Evidence for cretaceous volcanism in Northern Victoria land, Antarctica, and implications for a mantle enrichment event during the Ross orogeny based on chemical and isotopic data from the Kirkpatrick basalt in the Mesa range, 18:3748 (IA;BR)
BATTELLE PACIFIC NORTHWEST LABORATORIES
Pacific Northwest Laboratory ALARA report for CY 1991, 18:2844 (R;US)
Planning and managing distributed computing resources, 18:4815 (R;US)
BATTERY CHARGERS
5AH10 Nickel-Cadmium (NiCad) Battery Maintenance Tester: User's manual, 18:3454 (R;US)
BAUXITE
Regenerable activated bauxite adsorbent alkali monitor probe, 18:2967 (PA;US)
BEAM BUNCHING
Downsampled bunch-by-bunch feedback for PEP II, 18:4011 (R;US)
BEAM DYNAMICS
See also BEAM BUNCHING
Constant of motion, Hamiltonian, and Lagrangian for autonomous systems defined in a hyperbolic flat space, 18:3982 (R;US)
BEAM MONITORS
Design and performance of the Booster Beam Position Monitor system, 18:3986 (R;US)
Design studies on the RHIC position monitor system, 18:3995 (R;US)
VXIbus Beam Position Monitor module, 18:4041 (R;US)
BEAM POSITION
Design and performance of the Booster Beam Position Monitor system, 18:3986 (R;US)
BEAM PROFILES
Limitations of a residual gas ionization beam profile monitor for the SSC Collider, 18:4013 (R;US)

BIOLOGICAL ACCUMULATION
Uptake and localization of nutritive and potantially toxic minerlas in ectomycorrhizae of forest trees, 18:4399 (RA;DE;In German)
BIOLOGICAL INDICATORS
Multi-element analysis of invertebrate animals in the ecosystem 'spruce stand', 18:4398 (RA;DE;In German)
Reflectance spectra of leaves and needles as basis for the physiological evaluation of tree damage. Pt. 4. Composition of chlorophyll-protein-complexes and first estimation of biomass production, 18:4396 (RA;DE;In German)
BIOLOGICAL MATERIALS
See also BIOLOGICAL WASTES
PLANT SAP
NAA and/or ICP-MS for the determination of trace elements in biological materials?, 18:3677 (RA;XA)
Thorium determination in water and biological materials by fission track, 18:3756 (I;BR;In Portuguese)

BIOLOGICAL REACTORS
See BIOREACTORS
BIOLOGICAL STRESS
Changes in photosynthetic activity, chlorophyll-fluorescence parameters and pigment content of differently damaged spruces during the vegetation period, 18:4395 (RA;DE;In German)
BIOLOGICAL WASTES
See also SEWAGE SLUDGE
URINE
The effect of gamma irradiation on crude fibre NDF, ADF, and ADL of some Syrian agricultural residues, 18:2854 (R;SY;In Arabic)
BIOMASS
Northeast Regional Biomass Program ninth year, third quarter report, April–June 1992, 18:2861 (R;US)
The potential for biomass to mitigate greenhouse gas emissions in the Northeastern US: Northeast Regional Biomass Program, 18:2907 (R;US)
BIOMASS PLANTATIONS
Carbon storage and recycling in short-rotation energy crops, 18:2906 (R;US)
BIOREACTORS
Mass-transfer and kinetic aspects in continuous bioreactors using Rhodospirillum rubrum, 18:2860 (RA;US)
Mixed- and plug-flow performances of an anaerobic biofilter treating 2-ethylhexanoic acid, 18:2902 (RA;US)
BIOTECHNOLOGY
Optimization of large-scale chromatography for biotechnological applications, 18:4264 (RA;US)
BIOTITE
Geochronological results on some granitoids from Benin and their bearing on the correlation Brazil/West Africa, 18:3740 (IA;BR)
BIRDS
See also FOWL
Status of birds at the Hanford Site in southeastern Washington: Revision 1, 18:2824 (R;US)
BISMUTH ADDITIONS
The effect of $Bi_2 O_3$ on the electrical properties of $Zr O_2$: 3 wt% Mg O ceramic solid electrolytes, 18:3628 (I;BR;In Portuguese)
BISMUTH ALLOYS
See also BISMUTH ADDITIONS
Atomistic studies of grain boundaries in alloys and compounds: Progress report, July 1990–October 1992, 18:3580 (R;US)
BITUMINOUS COAL
Enhanced reactivity and selectivity in coal liquefaction and coprocessing systems. Catalytic coprocessing study using probe reactants, 18:2534 (RA;US)
Integrated coal liquefaction/characterization. Low temperature depolymerization and liquefaction of Premium U.S. coal samples, 18:2539 (RA;US)
Integrated coal liquefaction/characterization. Solvent extraction and pyrolysis, 18:2538 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Kinetics of coal hydrogenation and cracking with Lewis acids, 18:2530 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Low temperature extraction with supersolvents, 18:2531 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Role of free radicals and catalysis-active sites in coal liquefaction, 18:2529 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal. Catalysis by soluble iron and molybdenum precursors for coprocessing of Argonne premium coals, 18:2525 (RA;US)
BLACK HOLES
Problems in particle theory: Technical report 1991–1992, 18:4487 (R;US)
BLACK SHALES
Selection of area and specific site for drilling a horizontal well in Calhoun County, West Virginia, 18:2624 (R;US)

Fatigue and environmentally assisted cracking in light water reactors, 18:3320 (RA;US)
Heavy-Section Steel Irradiation Program: Embrittlement issues, 18:3318 (RA;US)
Heavy-Section Steel Technology Program: Recent developments in crack initiation and arrest research, 18:3315 (RA;US)
Most likely failure location during severe accident conditions, 18:3350 (RA;US)
Progress in evaluation and improvement in nondestructive examination reliability for inservice inspection of light water reactors (LWRs) and characterizing fabrication flaws in reactor pressure vessels, 18:3323 (RA;US)
Universal treatment of plumes and stresses for pressurized thermal shock evaluations, 18:3387 (RA;US)

Primary Coolant Circuits
Estimation of mechanical properties of cast stainless steels during thermal aging in LWR systems, 18:3321 (RA;US)
Mechanical-property degradation of cast stainless steel components from the Shippingport reactor, 18:3322 (RA;US)
Progress in evaluation and improvement in nondestructive examination reliability for inservice inspection of light water reactors (LWRs) and characterizing fabrication flaws in reactor pressure vessels, 18:3323 (RA;US)

Reactor Accidents
A framework for the assessment of severe accident management strategies, 18:3364 (RA;US)
A structured approach to individual plant evaluation and accident management, 18:3363 (RA;US)
Assessment of two BWR accident management strategies, 18:3365 (RA;US)
Precursors to potential severe core damage accidents: 1991, A status report: Volume 16, Appendices B, C, and D, 18:3432 (R;US)
US nuclear industry approach to severe accident management guidance development and implementation, 18:3362 (RA;US)

Reactor Components
Applications and extensions of degradation modeling, 18:3330 (RA;US)
Validation and transfer of advanced NDE technologies, 18:3324 (RA;US)

Reactor Cooling Systems
Fatigue and environmentally assisted cracking in light water reactors, 18:3320 (RA;US)
Pipe fracture behavior under high-rate (seismic) loading - The IPIRG program, 18:3316 (RA;US)
Short cracks in piping and piping welds, 18:3317 (RA;US)
Snubber aging assessment: Results of NPAR Phase 2 in-plant research, 18:3336 (RA;US)
The effects of aging on friction of MOVs, 18:3328 (RA;US)

Reactor Core Disruption
ACE project Phases C and D: ACE/MCCI and MACE tests, 18:3356 (RA;US)
Adiabatic equilibrium models for direct containment heating, 18:3347 (RA;US)
Boiling jet modeling on IFCI - Preliminary report, 18:3346 (RA;US)
CORA experiments on the materials behavior of LWR fuel rod bundles at high temperatures, 18:3345 (RA;US)
Comparisons between HDR-H_2-distribution experiments E11.2 and E11.4, 18:3349 (RA;US)
Core-concrete interactions with overlying water pools, 18:3357 (RA;US)
Iodine chemical forms in LWR severe accidents, 18:3359 (RA;US)
MELCOR peer review, 18:3342 (RA;US)
Main safety issues related to IPSN severe accident research, 18:3353 (RA;US)
Managing water addition to a degraded core, 18:3361 (RA;US)
Most likely failure location during severe accident conditions, 18:3350 (RA;US)
New containment modeling features of the CONTAIN code, 18:3344 (RA;US)
Parameter effects on molten debris spreading and coolability, 18:3354 (RA;US)
Planned MELCOR improvements and assessment, 18:3343 (RA;US)
Results of recent NUPEC hydrogen related tests, 18:3348 (RA;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 18:3358 (RA;US)

Reactor Instrumentation
Effects of aging on calibration and response time of nuclear plant pressure transmitters, 18:3335 (RA;US)

Reactor Operation
Analysis of a BWR direct cycle forced circulation power plants operation, 18:2985 (I;BR;In Portuguese)

Reactor Operators
A performance indicator of the effectiveness of human-machine interfaces for nuclear power plants: Preliminary results, 18:3388 (RA;US)

Reactor Protection Systems
Aging studies of 1E power and reactor protection systems, and transformers, 18:3325 (RA;US)

Reactor Safety
A performance indicator of the effectiveness of human-machine interfaces for nuclear power plants: Preliminary results, 18:3388 (RA;US)
A review of containment accidents, 18:3396 (RA;US)
ALWR utility requirements document containment performance requirements, 18:3400 (RA;US)
ANSI/ANS 56.8 standard committee status report, 18:3426 (RA;US)
Accomplishments and prospects, 18:3319 (RA;US)
Aging assessment of BWR control rod drive systems, 18:3331 (RA;US)
Aging of concrete containment structures in nuclear power plants, 18:3429 (RA;US)
Aging studies of 1E power and reactor protection systems, and transformers, 18:3325 (RA;US)
An investigation of liner tearing in reinforced concrete reactor containment buildings: Comparison of experimental and analytical results, 18:3421 (RA;US)
Analyses of corium spreading in Mark I containment geometry, 18:3355 (RA;US)
Applications and extensions of degradation modeling, 18:3330 (RA;US)
Containment leakage rate testing requirements, 18:3425 (RA;US)
Containment penetrations - flexible metallic bellows testing, safety, life extension issues, 18:3428 (RA;US)
Containment performance experiments under severe accident loadings, 18:3369 (RA;US)
Containment severe accident phenomenology, 18:3394 (RA;US)
Creep rupture failure in a Mark I containment with a new thermal failure material model, 18:3424 (RA;US)
Design considerations for concrete containments under severe accident loads, 18:3402 (RA;US)
Design of the internal geometry of an advanced containment for mitigating deflagration overpressures, 18:3408 (RA;US)
Detecting and mitigating aging in component cooling water systems, 18:3327 (RA;US)
Eccentric H_2 detonation in a nuclear power plant steel containment, 18:3417 (RA;US)
Effects of aging on calibration and response time of nuclear plant pressure transmitters, 18:3335 (RA;US)
Estimation of mechanical properties of cast stainless steels during thermal aging in LWR systems, 18:3321 (RA;US)
Fatigue and environmentally assisted cracking in light water reactors, 18:3320 (RA;US)
Heavy-Section Steel Irradiation Program: Embrittlement issues, 18:3318 (RA;US)
Heavy-Section Steel Technology Program: Recent developments in crack initiation and arrest research, 18:3315 (RA;US)
High-temperature leak characteristics test of PCV hatch flanges gasket, 18:3420 (RA;US)
Human Performance Investigation Process (HPIP), 18:3379 (RA;US)
Including test errors in evaluating surveillance test intervals, 18:3381 (RA;US)
Industry current and future plans for implementation of proposed revision of 10 CFR Part 50, Appendix J, Containment Leak Rate Testing, 18:3427 (RA;US)
Main safety issues related to IPSN severe accident research, 18:3353 (RA;US)
Mechanical-property degradation of cast stainless steel components from the Shippingport reactor, 18:3322 (RA;US)
NRC test results and operations experience provide insights for a new gate valve stem force correlation, 18:3329 (RA;US)
New method for detecting degradation in installed cables in nuclear power plants, 18:3326 (RA;US)
Numerical simulation of the ultimate load capacity of a reactor containment building, 18:3422 (RA;US)
Opening remarks, 18:3393 (RA;US)
Organizational factors influencing improvements in safety, 18:3380 (RA;US)
Overview of NUPEC containment integrity project, 18:3413 (RA;US)
Pipe fracture behavior under high-rate (seismic) loading - The IPIRG program, 18:3316 (RA;US)
Plan on test to failure of a steel containment vessel model, 18:3415 (RA;US)
Progress in evaluation and improvement in nondestructive examination reliability for inservice inspection of light water reactors (LWRs) and characterizing fabrication flaws in reactor pressure vessels, 18:3323 (RA;US)
Progress in research on aging of structures, 18:3371 (RA;US)
Proposed criteria to accommodate severe accidents in containment design, 18:3395 (RA;US)
Recent development and results from severe accident research in Japan, 18:3352 (RA;US)
SBWR reinforced concrete containment structural performance during severe accident, 18:3405 (RA;US)
Short cracks in piping and piping welds, 18:3317 (RA;US)
Snubber aging assessment: Results of NPAR Phase 2 in-plant research, 18:3336 (RA;US)
Studies on ALWR's containment system penetration, 18:3409 (RA;US)
The effects of aging on friction of MOVs, 18:3328 (RA;US)
Universal treatment of plumes and stresses for pressurized thermal shock evaluations, 18:3387 (RA;US)

Updated ASME code rules for inservice inspection of steel and concrete containments, 18:3430 (RA;US)
Validation and transfer of advanced NDE technologies, 18:3324 (RA;US)
Verification and validation of expert systems, 18:3382 (RA;US)

Reactor Safety Experiments
ACE project Phases C and D: ACE/MCCI and MACE tests, 18:3356 (RA;US)
Boiling jet modeling on IFCI - Preliminary report, 18:3346 (RA;US)
CORA experiments on the materials behavior of LWR fuel rod bundles at high temperatures, 18:3345 (RA;US)
Comparisons between HDR-H_2-distribution experiments E11.2 and E11.4, 18:3349 (RA;US)
High level seismic/vibrational tests at the HDR - An overview, 18:3370 (RA;US)
Large-Scale Seismic Test Program at Hualien, Taiwan, 18:3368 (RA;US)
Post-test analysis of a 1:10-scale top slab model of ABWR/RCCV subjected to internal pressure, 18:3406 (RA;US)
Results of recent NUPEC hydrogen related tests, 18:3348 (RA;US)
Scaling issues for a thermal-hydraulic integral test facility, 18:3385 (RA;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 18:3358 (RA;US)

Risk Assessment
A structured approach to individual plant evaluation and accident management, 18:3363 (RA;US)
Enhancing the seismic margin review methodology to obtain risk insights, 18:3367 (RA;US)
Intersystem LOCA risk assessment: Methodology and results, 18:3341 (RA;US)
Risk-based performance indicators, 18:3340 (RA;US)

Seismic Effects
A basis for standardized seismic design (SSD) for nuclear power plants, 18:3392 (RA;US)
Enhancing the seismic margin review methodology to obtain risk insights, 18:3367 (RA;US)
High level seismic/vibrational tests at the HDR - An overview, 18:3370 (RA;US)
High-precision accelerator-mass-spectrometer radiocarbon dating of buried tidal-marsh soils - An approach to estimating the frequency and coastal extent of subduction zone earthquakes in Oregon and Washington, 18:3390 (RA;US)
Large-Scale Seismic Test Program at Hualien, Taiwan, 18:3368 (RA;US)
Liquefaction induced by modern earthquakes as a key to paleoseismicity: A case study of the 1988 Saguenay event, 18:3389 (RA;US)
Soil/structure interactions of eastern US type earthquakes, 18:3391 (RA;US)
Studies performed in support of the proposed revision of engineering design aspects of 10CFR100, Appendix A, 18:3366 (RA;US)

Shielding
Specifications for the development of BUGLE-93: An ENDF/B-VI multigroup cross section library for LWR shielding and pressure vessel dosimetry, 18:3441 (R;US)

Site Selection
Studies performed in support of the proposed revision of engineering design aspects of 10CFR100, Appendix A, 18:3366 (RA;US)

Specifications
Standard Technical Specifications, General Electric Plants, BWR/6: Volume 3, Bases (Sections 3.4-3.10), 18:2988 (R;US)
Standard Technical Specifications, General Electric plants, BWR/4: Volume 1, Specifications, 18:2986 (R;US)
Standard Technical Specifications, General Electric plants, BWR/4: Volume 2, Bases (Sections 2.0–3.3), 18:2987 (R;US)

Stability
Identification of process dynamics. Stability monitoring in BWR type reactors, 18:3079 (R;SE;In Swedish)

Standardization
A basis for standardized seismic design (SSD) for nuclear power plants, 18:3392 (RA;US)
Post-test analysis of a 1:10-scale top slab model of ABWR/RCCV subjected to internal pressure, 18:3406 (RA;US)
SBWR reinforced concrete containment structural performance during severe accident, 18:3405 (RA;US)
Scaling issues for a thermal-hydraulic integral test facility, 18:3385 (RA;US)

Surveillance
Including test errors in evaluating surveillance test intervals, 18:3381 (RA;US)

C

C REACTOR
Enriched uranium fuel quality: Preliminary report, 18:3102 (R;US)

C-1430 RESONANCES
See MESONS

C-REACTIVE PROTEIN
See GLOBULINS

CABLES (ELECTRIC)
See ELECTRIC CABLES

CACTACEAE
See CACTI

CACTI
The anionic glycan from the cactus Cereus peruvianus, 18:4269 (RA;US)

CADMIUM
Application of neutron activation analysis to the determination of toxic elements in Malaysia foodstuffs, 18:3684 (RA;XA)
Co-ordinated research programme on nuclear techniques for toxic elements in foodstuffs: Report on the third research coordination meeting, Jakarta, Indonesia, 20-24 November 1989, 18:3673 (R;XA)
Forms of lead and cadmium soil in the vicinity of lead reprocessing smelter, 18:4159 (RA;US)
Process for measuring low cadmium levels in blood and other biological specimens, 18:4290 (PA;US)
Recycling of cadmium and selenium from photovoltaic modules and manufacturing wastes: A workshop report, 18:2938 (R;US)

CADMIUM COMPLEXES
Anion exchange removal of cadmium-EDTA complexes, 18:4230 (RA;US)

CADMIUM SELENIDES
Manipulation and control of photoinduced charge transfer processes occurring at cadmium chalconide aqueous photoelectrochemical interface, 18:3853 (RA;US)
Photocarrier relaxation in cadmium chalcogenides, 18:3829 (RA;US)

CADMIUM SULFATES
Studies on the detection of toxic, genotoxic and carcinogenic effects induced by exposure to heavy metals, 18:4422 (RA;DE;In German)

CADMIUM SULFIDE SOLAR CELLS
Photochemical solar energy conversion utilizing semiconductors located in membrane mimetic systems, 18:2925 (RA;US)

CALCITE
Presence of Gondwana ice sheet during the deposition of the Permo-Carboniferous formations, Beacon Supergroup, Trans antarctic Mountains, 18:3745 (IA;BR)

CALCIUM
Histological and histochemical investigations on the nutrient dynamics in forest trees with regard to the 'New-type forest decline'. Pt. 4. Binding forms and micromorphological distribution of calcium in spruce needles, 18:4403 (RA;DE;In German)

CALCIUM 40 TARGET
Nuclear structure studies at intermediate energy: Progress report, August 1991–August 1992 (School of Physics and Astronomy, Univ. of Minnesota), 18:4611 (R;US)

CALCIUM COMPOUNDS
See also CALCIUM OXIDES

A model approach to highly dispersing catalytic materials in coal for gasification: Eleventh quarterly report, April 1, 1992–June 30, 1992, 18:2517 (R;US)
Method of activating limestone for enhanced capture of sulfur from post combustion gases, 18:2978 (PA;US)

CALCIUM OXIDES
Microstructural and electronic properties of highly oriented $Tl_{0.5}Pb_{0.5}Sr_2CaCu_2O_7$ films on $LaAlO_3$, 18:3634 (R;US)

CALCULATION METHODS
See also MONTE CARLO METHOD
Comparison of calculations with measurements of control rod worths in the HEU RA-2 reactor. Pt. 1, 18:3217 (RA;XA)

CALIBRATION STANDARDS
Application of neutron activation analysis to the monitoring of trace elements in Brazilian foodstuffs, 18:3680 (RA;XA)
Intercomparison of enriched stable isotope reference materials for medical and biological studies, 18:3685 (R;XA)

CALIFORNIUM 252
Energy spectra of fast neutrons by nuclear emulsion method, 18:4640 (I;BR;In Portuguese)

CALORIMETERS
Design of an actively cooled plate calorimeter for the investigation of pool fire heat fluxes, 18:3924 (R;US)

CALORIMETERS (PARTICLE)
See SHOWER COUNTERS

CANADA
See also QUEBEC
Chemical factor patterns and leachability of incinerator and industrial stack solids, 18:3703 (RA;XA)

CANADA NRX RESEARCH REACTOR
See NRX REACTOR

CANADIAN NRU REACTOR
See NRU REACTOR

CANDU TYPE REACTORS
See also CERNAVODA-1 REACTOR
WOLSUNG-1 REACTOR
Exploiting digital systems technology to improve nuclear safety, 18:3373 (RA;US)
Liquefaction induced by modern earthquakes as a key to paleoseismicity: A case study of the 1988 Saguenay event, 18:3389 (RA;US)

CANINES
See DOGS

CANISTERS
See CONTAINERS

CANNING
A review of means for encasing uranium in aluminum, 18:3058 (R;US)

CANONICAL QUANTUM FIELD THEORY
See LAGRANGIAN FIELD THEORY

CAPITAL
Present status and future directions of IRP, 18:4759 (R;US)

CAPROIC ACID
See HEXANOIC ACID

CAPTURE
Coulomb effects in the proton-deuteron scattering and radiative capture processes at zero energy, 18:4631 (R;UA)

CARBAMATES
Solid phase extraction of As(III) from aqueous samples using on-column formation of As(III)-Trispyrrolidinedithiocarbamate, 18:3798 (RA;XA)

CARBENES
Highly nucleophilic acetylide, vinyl, and vinylidene complexes: Progress report, 18:3780 (R;US)

CARBON
See also CARBYNES
FULLERENES
GRAPHITE
Equilibrium charge state distributions of 1–30 keV atomic projectiles transiting thin carbon foils, 18:4683 (R;US)
High rate chemical vapor deposition of carbon films using fluorinated gases, 18:3660 (PA;US)

CARBON 12 TARGET
π^--meson production in the interaction of deuterons at 1 GeV per nucleon with carbon and beryllium extended targets, 18:4634 (R;SU;In Russian)
Charge correlations as a probe of nuclear disassembly, 18:4614 (R;DE)
First observation of the inelastic neutrino-nucleus-scattering $\nu + {}^{12}C \rightarrow \nu' + {}^{12}C^*$, 18:4635 (R;DE;In German)
Statistical fragmentation of Au projectiles at E/A=600 MeV, 18:4613 (R;DE)
Total and 2n-removal cross sections of the neutron-rich isotopes ${}^{8,9,11}Li$, 18:4617 (R;DE)

CARBON CYCLE
Carbon storage and recycling in short-rotation energy crops, 18:2906 (R;US)
Soil organic matter dynamics and the global carbon cycle, 18:4174 (R;US)

CARBON DIOXIDE
Baseline design/economics for advanced Fischer-Tropsch technology: Quarterly report, April–June 1992, 18:2546 (R;US)
CO_2 removal by high-density culture of a marine cyanobacterium Synechococcus sp. using an improved photobioreactor employing light-diffusing optical fibers, 18:4376 (RA;US)
CO_2 removal in competition with other options for reducing CO_2 emissions, 18:4126 (R;NL;In Dutch)
Chemical interaction of flue gas components with the growth of Cyanidium caldarium, 18:4380 (RA;US)
Collection of VLE data for acid gas—alkanolamine systems using fourier transform infrared spectroscopy: Phase 2, October 1, 1991–September 30, 1992, 18:2623 (R;US)
Growth characteristics of microalgae in high-concentration CO_2 gas, effects of culture medium trace components, and impurities thereon, 18:4111 (RA;US)
National Energy Policy and Climate Change Prevention: The role of new energy technologies, 18:3471 (R;NL)

CARBON IONS
Angular distributions of charge exchange collisions at very low energies, 18:4662 (R;US)

CARBON MONOXIDE
Application of numerical modeling in a clean-coal demonstration project, 18:2960 (R;US)
Final executive summary for Vibronic Exchange Visible Laser Program, 18:3955 (R;US)
Mechanistic enzymology of CO dehydrogenase from Clostridium thermoaceticum: Progress report, August 15, 1993–March 24, 1995, 18:2904 (R;US)
Studies relevant to the catalytic activation of carbon monoxide: Technical progress report, September 1991, 18:3779 (R;US)
The Natural Gas Vehicle Challenge '92: Exhaust emissions testing and results, 18:3558 (R;US)

CARBON TETRACHLORIDE
Spectroscopic and kinetic characterization of chlorine atom in solution, 18:3854 (RA;US)

CARBONYLS
Highly nucleophilic acetylide, vinyl, and vinylidene complexes: Progress report, 18:3780 (R;US)

CARBOXYLIC ACIDS
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver, 18:3808 (R;US)
Influence of ammonium chloride on growth and fatty acid production by Spirulina platensis, 18:4373 (RA;US)
Non-catalytic steam hydrolysis of fats: Final report, 18:3541 (R;US)

CARBYNES
Highly nucleophilic acetylide, vinyl, and vinylidene complexes: Progress report, 18:3780 (R;US)

CARCINOGENESIS
Results of a chronic inhalation with N-nitrosodimethylamine (NDMA) and SO_2/NO_x, 18:4417 (RA;DE;In German)

CARDIOGRAPHY
The fabrication and performance of $YBa_2Cu_3O_{7-x}$ SQUID magnetometers, 18:4697 (R;US)

CARIBOU
See DEER

CAROTENOIDS
Electrochemical EPR, ENDOR, and molecular orbital study of carotenoids and carotenoid cation radicals, 18:3842 (RA;US)

CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY

CASCADE (EXTRACTION)
See EXTRACTION COLUMNS

CASKS
See also SPENT FUEL CASKS
Development of cask and transportation system: Study on the cask design, test and transportation system, 18:2715 (R;KR;In Korean)
The transport of spent fuel elements of research reactors, 18:2708 (RA;XA)
Transportation of irradiated TRIGA-LEU fuel, 18:2709 (RA;XA)

CATALYST SUPPORTS
Membrane catalyst layer for fuel cells, 18:3520 (PA;US)
The effect of catalyst preparation on catalytic activity: Final report, December 1, 1988–June 30, 1992, 18:3784 (R;US)

CATALYSTS
See also ELECTROCATALYSTS
EXAFS study of metal-coated particles produced by ball milling, 18:3569 (R;US)
[Studies of supported hydrodesulfurization catalysis]: Progress report, 18:3786 (R;US)

Catalyst Supports
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, October 1, 1985–12/31/85, 18:2504 (R;US)

Chemical Preparation
Alkali/TX_2 catalysts for CO/H_2 conversion to C_1-C_4 alcohols: Technical progress report, December 1989–February 1990, 18:2513 (R;US)
Alkali/TX_2 catalysts for CO/H_2 conversion to C_1-C_4 alcohols: Technical progress report, March 1989–August 1989, 18:2512 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, January 1, 1985–March 31, 1985, 18:2502 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, October 1, 1985–12/31/85, 18:2504 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, October 1, 1986–December 31, 1986, 18:2508 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, April 1, 1985–June 30, 1985, 18:2503 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: [Quarterly report], January 1, 1986–March 31, 1986, 18:2505 (R;US)
The development of a selective ruthenium catalyst: Technical progress report, January 1, 1988–March 31, 1988, 18:2510 (R;US)
The development of a selective ruthenium catalyst: Technical progress report, October 1, 1987–December 31, 1987, 18:2509 (R;US)
The effect of catalyst preparation on catalytic activity: Final report, December 1, 1988–June 30, 1992, 18:3784 (R;US)

Design
A two-phase method to produce gel beads: Application in the design of a whole cell β-galactosidase catalyst, 18:4272 (RA;US)

Energy Levels
The calculation of surface orbital energies for specific types of active sites on dispersed metal catalysts, 18:3575 (R;US)

Particle Size
Materials characterization study of coal liquefaction processes. Structure and size distributions of highly dispersed iron-based catalysts, 18:2522 (RA;US)

Performance Testing
Alkali/TX_2 catalysts for CO/H_2 conversion to C_1-C_4 alcohols: Technical progress report, March 1989–August 1989, 18:2512 (R;US)
Enhanced reactivity and selectivity in coal liquefaction and co-processing systems. Improved catalysts for coal liquefaction and coprocessing, 18:2535 (RA;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, July 1, 1986–September 30, 1986, 18:2507 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, January 1, 1985–March 31, 1985, 18:2502 (R;US)

Poisoning
Mechanistic study of poisoning of DeNoxING catalysts by alcali metals, 18:2976 (R;IT)

Specificity
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, July 1, 1986–September 30, 1986, 18:2507 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, October 1, 1986–December 31, 1986, 18:2508 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: [Quarterly report], April 1, 1986–June 30, 1986, 18:2506 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: [Quarterly report], January 1, 1986–March 31, 1986, 18:2505 (R;US)
The development of a selective ruthenium catalyst: Technical progress report, January 1, 1988–March 31, 1988, 18:2510 (R;US)

Structural Chemical Analysis
Materials characterization study of coal liquefaction processes. Structure and size distributions of highly dispersed iron-based catalysts, 18:2522 (RA;US)

Sulfidation
Basic process/resource evaluation task. Coal liquefaction catalysis, 18:2541 (RA;US)

Surface Properties
A Frontier Molecular Orbital determination of the active sites on dispersed metal catalysts, 18:3794 (R;US)
The calculation of surface orbital energies for specific types of active sites on dispersed metal catalysts, 18:3575 (R;US)

CATHODES
See also PHOTOCATHODES
Development of Solid Oxide Fuel Cell (SOFC): Third semi-annual progress report August 1991-January 1992, 18:3518 (R;NL)
Manufacturing techniques for components of flat plate, solid oxide fuel cell (SOFC) reactors: First semi-annual progress report July 1991-December 1991, 18:3517 (R;NL)

CATION EXCHANGE CAPACITY
See CATIONS

CATIONS
See also HYDROGEN IONS 1 PLUS
Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition: Triennial performance report, August 1, 1989–July 31, 1992, 18:3668 (R;US)
Species distribution models and complexing on natural organic macromolecules, 18:4247 (RA;DE;In German)

CAUCHY PROBLEM
Spline approximation for system of n-th order nonlinear ordinary differential equations, 18:4459 (R;XA)

CAVITY RESONATORS
See also SUPERCONDUCTING CAVITY RESONATORS
Characterization of a gyrotron cavity at 10 GHz, 18:4719 (R;BR)

CDC COMPUTERS
LIST: a computer code for obtaining reduced copies of files in the CDC CYBER 170/750 computer, 18:4777 (R;BR;In Portuguese)

CE STANDARD REACTOR
The effect of aging upon CE and B and W control rod drives, 18:3332 (RA;US)

CELL GROWTH (PLANT)
See PLANT CELLS

CELLS (BACTERIAL)
See BACTERIA

CELLS (PLANT)
See PLANT CELLS

CELLULASE
Cellobiose hydrolysis by glutaraldehyde-treated β-glucosidase entrapped in propylene glycol alginate/bone gelatin spheres, 18:2878 (RA;US)

Direct microbial conversion: Prospects, progress, and obstacles, 18:2890 (RA;US)
Improvement of cellulase activity in Trichoderma, 18:4292 (RA;US)
On the use of enzyme adsorption and specific hydrolysis rate to characterize thermal-chemical pretreatment, 18:2866 (RA;US)
Recovery of cellulases after hydrolysis by adsorption on steam-pretreated willow, 18:2869 (RA;US)
Thermal denaturation of Trichoderma reesei cellulases studied by differential scanning calorimetry and tryptophan fluorescence, 18:4266 (RA;US)

CELLULASES
See CELLULASE

CELLULOSE
Acid Hydrolysis
Dilute sulfuric acid pretreatment of corn stover at high solids concentrations, 18:2899 (RA;US)
Dilute-acid pretreatment of two short-rotation herbaceous crops, 18:2870 (RA;US)
Preliminary studies on the processing sequence for southern red oak and municipal solid waste using a hybrid dilute acid/enzymatic hydrolysis process for ethanol production, 18:2898 (RA;US)

Bioconversion
Preliminary estimate of the cost of ethanol production for SSF technology, 18:2897 (RA;US)
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers, 18:2862 (R;US)
Simultaneous saccharification and extractive fermentation for acetone/butanol production from pretreated hardwood, 18:2892 (RA;US)

Enzymatic Hydrolysis
Cellobiose hydrolysis by glutaraldehyde-treated β-glucosidase entrapped in propylene glycol alginate/bone gelatin spheres, 18:2878 (RA;US)
Comparison of steam pretreatment of eucalyptus, aspen, and spruce wood chips and their enzymatic hydrolysis, 18:2865 (RA;US)
Dilute sulfuric acid pretreatment of corn stover at high solids concentrations, 18:2899 (RA;US)
Direct microbial conversion: Prospects, progress, and obstacles, 18:2890 (RA;US)
Effects of cell-wall acetate, xylan backbone, and lignin on enzymatic hydrolysis of aspen wood, 18:2864 (RA;US)
Effects of natural polymer acetylation on the anaerobic bioconversion to methane and carbon dioxide, 18:2900 (RA;US)
Enzymatic saccharification of industrial and agricultural lignocellulosic wastes, 18:2896 (RA;US)
Mathematical modeling of cellulose conversion to ethanol by the simultaneous saccharification and fermentation process, 18:2891 (RA;US)
On the use of enzyme adsorption and specific hydrolysis rate to characterize thermal-chemical pretreatment, 18:2866 (RA;US)
Performance of microorganisms in spent sulfite liquor and enzymatic hydrolysate of steam-pretreated salix, 18:2880 (RA;US)
Plant processing by simultaneous lactic acid fermentation and enzyme hydrolysis, 18:2876 (RA;US)
Preliminary studies on the processing sequence for southern red oak and municipal solid waste using a hybrid dilute acid/enzymatic hydrolysis process for ethanol production, 18:2898 (RA;US)
Pretreatment of lignocellulosic municipal solid waste by ammonia fiber explosion (AFEX), 18:2863 (RA;US)
Recovery of cellulases after hydrolysis by adsorption on steam-pretreated willow, 18:2869 (RA;US)
Simulation and optimization of a cell recycle system, 18:2894 (RA;US)
Simulation of ethanol production processes based on enzymatic hydrolysis of lignocellulosic materials using ASPEN PLUS, 18:2868 (RA;US)
Use of chemostat for enhanced production of β-glucosidase by newly isolated anaerobic cellulolytic Clostridium strain RT9, 18:4271 (RA;US)

Sorptive Properties
Sorption of heavy metals by untreated red fir sawdust, 18:4226 (RA;US)

CENTRAL REGION
See USA

CERAMIC MELTERS
Evaluation of the DWPF chemical process cell sample condenser in the integrated DWPF melter system, 18:2805 (R;US)

CERAMICS
Ceramic Technology Project semiannual progress report for October 1991–March 1992, 18:3636 (R;US)
Ceramic decomposition under irradiation, 1987: Progress report, 18:3621 (R;US)
Materials Development Program, Ceramic Technology Project addendum to program plan: Cost effective ceramics for heat engines, 18:3635 (R;US)
Molecular and polymeric ceramic precursors: Research progress report, 18:3617 (R;US)
Process for strengthening silicon based ceramics, 18:3638 (PA;US)
Trace analysis of ceramics by laser ionization mass spectrometry, 18:3631 (R;DE)

CERCLA
See US SUPERFUND

CERIUM 140 TARGET
Investigation of γ-transitions in the $^{140}Ce(n,n'\gamma)$ reaction, 18:4598 (IA;LY)

CERIUM 141
Production of Ce-141 and Pr-143 isotopes by the method of extraction, 18:3897 (IA;LY)

CERIUM ALLOYS
Small angle neutron scattering studies of $Ce(Fe_{1-x}Al_x)_2$, 18:3573 (R;US)

CERIUM IONS
Energy transfer and non-linear optical properties at near ultraviolet wavelengths: Rare earth 4f $\rightarrow$ 5d transitions in crystals and glasses: Final report, June 1, 1984–May 31, 1992, 18:3825 (R;US)

CERIUM OXIDES
Tetragonal zirconia ceramics in $Zr O_2$-$Ce O_2$ system (Ce-TZP): preparation, characterization and mechanical properties, 18:3630 (R;BR;In Portuguese)

CERMETS
Manufacturing techniques for components of flat plate, solid oxide fuel cell (SOFC) reactors: First semi-annual progress report July 1991-December 1991, 18:3517 (R;NL)

CERNAVODA-1 REACTOR
Development of expert systems based on PSA models for the Cernavoda nuclear power plant, 18:3019 (RA;XA)

CESIUM
200 Areas Operation monthly report, December 1967, 18:2671 (R;US)
200 Areas Operation monthly report, December 1970, 18:2677 (R;US)
200 Areas Operation monthly report, February 1968, 18:2673 (R;US)
200 Areas Operation monthly report, January 1968, 18:2672 (R;US)
200 Areas Operation monthly report, June 1970, 18:2675 (R;US)
200 Areas Operation monthly report, September 1969, 18:2674 (R;US)
200 Areas Operation monthly report, September 1970, 18:2676 (R;US)

CESIUM 137
Annual report of the Environmental Restoration Monitoring and Assessment Program at Oak Ridge National Laboratory for FY 1992: Environmental Restoration Program, 18:4206 (R;US)
Savannah River Site Environmental Report for 1990: Summary pamphlet, 18:4214 (R;US)
Sorption and fixation of biotoxic radionuclides on zeolites for decontamination of the spent fuel elements cooling medium, 18:3806 (I;CS;In Czech)
The diffusion of some radionuclides in local rocks collected from potential repository in Syria, 18:4150 (R;SY;In Arabic)

Westinghouse Hanford Company environmental surveillance annual report: Calendar year 1991, 18:4212 (R;US)

CESIUM COMPOUNDS
See also CESIUM IODIDES
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet $CsCo_{0.83}Mg_{0.17}Br_3$, 18:4679 (R;US)

CESIUM IODIDES
Photoemission from Ag, Cu, and CsI, 18:3993 (R;US)

CESIUM IONS
Multifunctional nanocomposite materials: Progress report, 18:3646 (R;US)

CESIUM ISOTOPES
See also CESIUM 137
Cesium in the Savannah River Site environment, 18:4217 (R;US)

CFC

CHALKS
See LIMESTONE

CHANNELS (REACTOR)
See REACTOR CHANNELS

CHARGE TRANSPORT
Charge transfer pathways in reversible model electron transfer systems, 18:3840 (RA;US)
Dynamic structural effects in photoinduced charge-transfer reactions, 18:3848 (RA;US)
Photoexcited charge pair escape and recombination, 18:3841 (RA;US)

CHARGED PARTICLE DETECTION
The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV $\bar{p}p$ collisions; and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions: Progress report, January 1, 1992–December 31, 1992 (Detect ionization of charged particles directly in Si), 18:4544 (R;US)

CHARGED-PARTICLE TRANSPORT
Fast algorithms for transport models: Technical progress report, 18:4639 (R;US)

CHARGING (REACTOR)
See REACTOR FUELING

CHARS
Coal combustion: Effect of process conditions on char reactivity: Fourth quarterly technical report, June 1, 1992–September 1, 1992, 18:2592 (R;US)
Effects of catalytic mineral matter on CO/CO_2 temperature and burning time for char combustion: Quarterly progress report No. 11, April–June 1992, 18:2583 (R;US)
Integrated methods for production of clean char and its combustion properties: [Quarterly] report, March 1, 1992–May 31, 1992, 18:2550 (R;US)
Integrated production/use of ultra low-ash coal, premium liquids and clean char: Technical report, March 1, 1992–May 31, 1992, 18:2497 (R;US)
Investigation of a technique for sulfur reduction of mild gasification char: Technical report, March 1–May 31, 1992, 18:2551 (R;US)

CHELATING AGENTS
Species distribution models and complexing on natural organic macromolecules, 18:4247 (RA;DE;In German)
[Bifunctional chelates of Rh-105, Au-199, and other metallic radionuclides as potential radiotherapeutic agents], 18:4279 (R;US)

CHEMICAL ACTIVATION
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding: Progress report, March 1, 1992–September 30, 1992, 18:3782 (R;US)

CHEMICAL ANALYSIS
See also ELECTRON MICROPROBE ANALYSIS
MULTI-ELEMENT ANALYSIS
DOE methods compendium, 18:3665 (R;US)

CHEMICAL EFFLUENTS
Ambient air monitoring for organic compounds, acids, and metals at Los Alamos National Laboratory, January 1991, 18:4138 (R;US)
Clinch River Environmental Restoration Program: Phase 1, Data listing, 18:4251 (R;US)
Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows: Progress report, February 1, 1992–January 31, 1993, 18:4115 (R;US)
Monitoring of heavy pollutants from industrial emissions and effluents, 18:3700 (RA;XA)

CHEMICAL EXPLOSIONS
Near-source observations of quarry explosions, 18:4062 (RA;US)
Static-stress analysis of dual-axis safety vessel, 18:3950 (R;US)

CHEMICAL EXPLOSIVES
See also PETN
Static-stress analysis of dual-axis confinement vessel, 18:4076 (R;US)

CHEMICAL HEAT PIPES
See HEAT PIPES

CHEMICAL LASERS
Final executive summary for Vibronic Exchange Visible Laser Program, 18:3955 (R;US)

CHEMICAL PLANTS
See also PETROCHEMICAL PLANTS
Comments on implementation and verification of closure of chemical weapons (CW) production facilities under a CW treaty, 18:3563 (R;US)
ISPE: A knowledge-based system for fluidization studies: 1990 Annual report, 18:4783 (R;US)

CHEMICAL REACTION KINETICS
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction, 18:3815 (R;US)

CHEMICAL REACTIONS

CLASSICAL MECHANICS
Information-theoretic outlook of the quantum dissipation problem, 18:4439 (R;XA)
On the Galilean covariance of classical mechanics, 18:4446 (R;PL)

CLAYS
See also BENTONITE
Mineral weathering and mineral destruction caused by acidification in forest stands of the Black Forest (Germany). First communication. Major aims and first results from the ARINUS stands 'Schluchsee and Villingen', 18:4402 (RA;DE;In German)
Multifunctional nanocomposite materials: Progress report, 18:3646 (R;US)
Photochemically induced charge separation and hydrogen evolution in microporous solids, 18:3828 (RA;US)

CLIMATES
Diagnostic studies of climate variability: Annual report, December 1, 1991–November 30, 1992, 18:4121 (R;US)

CLIMATIC CHANGE
See also GREENHOUSE EFFECT
Diagnostic studies of climate variability: Annual report, December 1, 1991–November 30, 1992, 18:4121 (R;US)
Greenhouse Earth: A Traveling Exhibition: Final report, September 1, 1991–August 31, 1992, 18:4182 (R;US)
Natural and anthropogenic climate change: Progress report, [September 1, 1991–March 31, 1992], 18:4117 (R;US)
The global historical climatology network: Long-term monthly temperature, precipitation, and pressure data, 18:4113 (R;US)
Thermohaline circulations and global climate change: Annual progress report no. 3, January 15, 1992–December 14, 1992, 18:4236 (R;US)

CLINCH RIVER
Clinch River Environmental Restoration Program: Phase 1, Data listing, 18:4251 (R;US)

CLINOPTILOLITE
Modeling fluid-rock interaction at Yucca Mountain, Nevada: A progress report, April 15, 1992, 18:2777 (R;US)

CLOSTRIDIUM
See also CLOSTRIDIUM ACETOBUTYLICUM
CLOSTRIDIUM THERMOSACCHAROLYTICUM
Use of chemostat for enhanced production of β-glucosidase by newly isolated anaerobic cellulolytic Clostridium strain RT9, 18:4271 (RA;US)

CLOSTRIDIUM ACETOBUTYLICUM
Simultaneous saccharification and extractive fermentation for acetone/butanol production from pretreated hardwood, 18:2892 (RA;US)

CLOSTRIDIUM THERMOSACCHAROLYTICUM
Plasmids from thermophilic Clostridia, 18:2882 (RA;US)

CLOUD COVER
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations: Technical progress report, 1 December 1991–30 November 1992, 18:4119 (R;US)
[Multifractal cloud properties data assessment], 18:4118 (R;US)

CLOUDINESS (METEOROLOGY)
See CLOUD COVER

CLOUDS
ARM Fourier transform spectrometer data analysis tools, 18:4120 (R;US)
Fractional activation of accumulation-mode particles in warm continental stratiform clouds, 18:4108 (R;US)
Status of instrumentation for the Southern Great Plains Clouds and Radiation Testbed, 18:4107 (R;US)
Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data, 18:4137 (R;US)

CLUSTER MODEL
Clustering of 1p-shell nuclei in the framework of the shell model, 18:4589 (R;PL)

CLUSTERS (FUEL ELEMENTS)
See FUEL ELEMENT CLUSTERS

CO-GENERATION
See COGENERATION

COAL
See also BROWN COAL
SUBBITUMINOUS COAL

Aerosol Wastes
Study of coal combustion aerosols using size fractionating sampling and nuclear analytical techniques, 18:3718 (RA;XA)

Biodegradation
Bioprocessing of coal, 18:2521 (RA;US)

Carbonization
Integrated methods for production of clean char and its combustion properties: [Quarterly] report, March 1, 1992–May 31, 1992, 18:2550 (R;US)

Combustion
Advanced Vortexing Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 1, 18:2578 (R;US)
Development of a Vortex Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 4, 18:2581 (R;US)
Development of a Vortexing Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 3, 18:2580 (R;US)
Development of a vortex combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 6, [1 February 1989–30 April 1989], 18:2582 (R;US)
Development of a vortexing combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 2, 1 February–30 April 1988, 18:2579 (R;US)
Particulate behavior in a controlled-profile pulverized coal-Fired reactor: A study of coupled turbulent particle dispersion and thermal radiation transport: Quarterly technical progress report, June 15, 1992–September 14, 1992, 18:2593 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 10, December 1, 1988–February 28, 1989, 18:2590 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 3, March 1, 1987–May 31, 1987, 18:2587 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly report No. 9, September 1, 1988–November 30, 1988, 18:2589 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly techical report, December 1, 1986–February 28, 1987, 18:2586 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 11, March 1, 1989–May 31, 1989, 18:2591 (R;US)
Research on thermophoretic and inertial aspects of ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report No. 6, December 1, 1987–February 28, 1988, 18:2588 (R;US)
Research on thermophoretic and inertial aspects of the ash particle deposition on heat exchanger surfaces in coal-fired equipment: Quarterly technical report, September 1, 1986–November 30, 1986, 18:2585 (R;US)
The fate of alkali species in advanced coal conversion systems: Final report, 18:2574 (R;US)

Combustion Products
Comparative study of combustion product emissions of Pakistani coal briquettes and traditional Pakistani domestic fuels, 18:2572 (R;US)

Comparative Evaluations
Coal plasticity at high heating rates and temperatures: Ninth technical progress report second quarter, April 1, 1992–June 30, 1992, 18:2569 (R;US)

Coprocessing
Enhanced reactivity and selectivity in coal liquefaction and coprocessing systems. Improved catalysts for coal liquefaction and coprocessing, 18:2535 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal. On the coliquefaction of coal with lignin, 18:2527 (RA;US)

Deashing
Integrated production/use of ultra low-ash coal, premium liquids and clean char: Technical report, March 1, 1992–May 31, 1992, 18:2497 (R;US)

Depolymerization
Integrated coal liquefaction/characterization. Fourier transform IR and chromatographic studies in coal liquefaction chemistry, 18:2565 (RA;US)
Lignin-assisted coal depolymerization: [Quarterly] report, March 1, 1992–May 31, 1992, 18:2567 (R;US)
The single electron chemistry of coals: [Quarterly], April 1–June 30, 1992, 18:2560 (R;US)

Desulfurization
Bioprocessing of coal, 18:2521 (RA;US)
Extraction, separation, and analysis of high sulfur coal: Final report, 18:2495 (R;US)
Interactions of thiophenes and acidophilic, thermophilic bacteria, 18:2498 (RA;US)

Dissolution
Bioprocessing of coal, 18:2521 (RA;US)

Drying
The use of solid-state NMR techniques for the analysis of water in coal and the effect of different coal drying techniques on the structure and reactivity of coal: Quarterly report, June 1, 1992–August 31, 1992, 18:2566 (R;US)

Electron Spin Resonance
The single electron chemistry of coals, January 1, 1990–March 30, 1990, 18:2559 (R;US)

Fluidized-Bed Combustion
Experimental study of the hydrodynamics and cluster formation in a Circulating Fluidized Bed: Annual report, 1990, 18:2576 (R;US)
Second year operation of the Tidd PFBC Demonstration Plant, 18:2575 (R;US)
The US Department of Energy perspective on pressurized fluidized bed combustion, 18:2577 (R;US)

Hydrogenation
Low severity coal liquefaction promoted by cyclic olefins: Quarterly report, January–March 1992, 18:2548 (R;US)

Inventories
Coal production, 1991, 18:2573 (R;US)

Multi-Element Analysis
Application of x-ray emission spectroscopy in evaluating the environmental impact of coal burning power plants, 18:3695 (RA;XA)
Environmental impact assessment of coal fired thermal power plants, 18:3691 (RA;XA)
Environmental impact of toxic elements leached from waste disposal of coal power plants, 18:3698 (RA;XA)

Nuclear Magnetic Resonance
The single electron chemistry of coals, January 1, 1990–March 30, 1990, 18:2559 (R;US)
The use of solid-state NMR techniques for the analysis of water in coal and the effect of different coal drying techniques on the structure and reactivity of coal: Quarterly report, June 1, 1992–August 31, 1992, 18:2566 (R;US)
Thermodynamics and surface structure of coals: Quarterly report, July 1, 1991–September 31, 1991, 18:2557 (R;US)

Plasticity
Coal plasticity at high heating rates and temperatures: Ninth technical progress report second quarter, April 1, 1992–June 30, 1992, 18:2569 (R;US)

Prices
Coal production, 1991, 18:2573 (R;US)

Production
Coal production, 1991, 18:2573 (R;US)

Pyrolysis
Coal combustion: Effect of process conditions on char reactivity: Fourth quarterly technical report, June 1, 1992–September 1, 1992, 18:2592 (R;US)
Continuous bench-scale tests to assess METHOXYCOAL process performance: Technical report, March 1–May 31, 1992, 18:2549 (R;US)

Research Programs
Fossil Energy Program semiannual progress report for April 1991 through September 1991, 18:2553 (R;US)
Fossil Energy Program semiannual progress report, October 1990–March 1991, 18:2594 (R;US)

Shrinkage
Permeability changes in coal resulting from gas desorption: Quarterly report, August 16, 1989–November 15, 1989, 18:2558 (R;US)

Solubility
Supercritical thermodynamcis of sulfur and nitrogen species: Quarterly progress report, April 1, 1992–June 30, 1992, 18:3795 (R;US)

Solvent Extraction
Basic process/resource evaluation task. Liquefaction of U.S. coals, 18:2543 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Chemical routes to breaking bonds: New approaches to low temperature liquefaction, 18:2528 (RA;US)

Sorptive Properties
Permeability changes in coal resulting from gas desorption: Quarterly report, August 16, 1989–November 15, 1989, 18:2558 (R;US)

Staged Combustion
Application of numerical modeling in a clean-coal demonstration project, 18:2960 (R;US)

Structural Chemical Analysis
Integrated coal liquefaction/characterization. Coal structure/liquefaction yield correlation by means of advanced NMR techniques, 18:2537 (RA;US)
Materials characterization study of coal liquefaction processes. XAFS and Mossbauer spectroscopy and CCSEM studies of coals of interest in the CFFLS program, 18:2561 (RA;US)

Supercritical State
Supercritical thermodynamcis of sulfur and nitrogen species: Quarterly progress report, April 1, 1992–June 30, 1992, 18:3795 (R;US)

Supply and Demand
Short-term energy outlook: Quarterly projections, fourth quarter 1992, 18:3501 (R;US)

Surface Area
Thermodynamics and surface structure of coals: Quarterly report, July 1, 1991–September 31, 1991, 18:2557 (R;US)

Surface Properties
Materials characterization study of coal liquefaction processes. Surface characterization of coals by XPS, 18:2562 (RA;US)

Swelling
Permeability changes in coal resulting from gas desorption: Quarterly report, August 16, 1989–November 15, 1989, 18:2558 (R;US)

COAL EXTRACTS
Liquefaction research in pyrolysis, catalysis and coal dissolution. Low temperature extraction with supersolvents, 18:2531 (RA;US)

COAL GAS
Innovative coke oven gas cleaning system for retrofit applications: Quarterly environmental monitoring report No. 3, January 1, 1991–December 31, 1991, 18:2514 (R;US)

Innovative coke oven gas cleaning system for retrofit applications: Quarterly environmental monitoring report No. 1, January 1, 1991–June 30, 1991, 18:2515 (R;US)
Innovative coke oven gas cleaning system for retrofit applications: Quarterly environmental monitoring report No. 2, July 1, 1991–September 30, 1991, 18:2516 (R;US)

COAL GASIFICATION
A model approach to highly dispersing catalytic materials in coal for gasification: Eleventh quarterly report, April 1, 1992–June 30, 1992, 18:2517 (R;US)
Integrated methods for production of clean char and its combustion properties: [Quarterly] report, March 1, 1992–May 31, 1992, 18:2550 (R;US)
Integrated production/use of ultra low-ash coal, premium liquids and clean char: Technical report, March 1, 1992–May 31, 1992, 18:2497 (R;US)
Investigation of a technique for sulfur reduction of mild gasification char: Technical report, March 1–May 31, 1992, 18:2551 (R;US)
Operation of a 10 t/h-prototype plant applying the VEW coal conversion process (pressurized operation). Final report, 18:2552 (I;DE;In German)
Screening of processing and upgrading schemes: Task 3, 18:2500 (R;US)
Test summary and detailed test plan for Mild Gasification Process Unit: Final report, 18:2499 (R;US)
The fate of alkali species in advanced coal conversion systems: Final report, 18:2574 (R;US)
Toxicity studies of mild gasification products, 18:4385 (R;US)

COAL LIQUEFACTION
See also LIQUID PHASE METHANOL PROCESS
TSL PROCESS
Low severity coal liquefaction promoted by cyclic olefins: Quarterly report, January–March 1992, 18:2548 (R;US)
Preconversion catalytic deoxygenation of phenolic functional groups: Quarterly technical progress report, April 1, 1992–June 30, 1992, 18:2518 (R;US)

Catalysis
Basic process/resource evaluation task. Coal liquefaction catalysis, 18:2541 (RA;US)
Integrated coal liquefaction/characterization. Fourier transform IR and chromatographic studies in coal liquefaction chemistry, 18:2565 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Role of free radicals and catalysis-active sites in coal liquefaction, 18:2529 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal. Coal liquefaction under mild conditions using triflic acid, iodine, and their combination, 18:2526 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal. Catalysis by soluble iron and molybdenum precursors for coprocessing of Argonne premium coals, 18:2525 (RA;US)

Catalysts
Coal liquefaction process streams characterization and evaluation: Quarterly technical progress report, January 1–March 31, 1992, 18:2544 (R;US)
Enhanced reactivity and selectivity in coal liquefaction and coprocessing systems. Improved catalysts for coal liquefaction and coprocessing, 18:2535 (RA;US)
Materials characterization study of coal liquefaction processes. Structure and size distributions of highly dispersed iron-based catalysts, 18:2522 (RA;US)
Optimization of reactor configuration in coal liquefaction: Third quarterly report, 1 April 1992–30 June 1992, 18:2547 (R;US)
Two-stage, close coupled catalytic liquefaction of coal: Fifteenth quarterly report, 1 April 1992–30 June 1992, 18:2511 (R;US)

Chemical Reaction Kinetics
Basic process/resource evaluation task. Coal maceral characterization and liquefaction, 18:2540 (RA;US)
Integrated coal liquefaction/characterization. Low temperature depolymerization and liquefaction of Premium U.S. coal samples, 18:2539 (RA;US)
Integrated coal liquefaction/characterization. Solvent extraction and pyrolysis, 18:2538 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Kinetics of coal hydrogenation and cracking with Lewis acids, 18:2530 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Low temperature extraction with supersolvents, 18:2531 (RA;US)
Materials characterization study of coal liquefaction processes. Computer modeling of vitrinite, 18:2524 (RA;US)
Materials characterization study of coal liquefaction processes. XAFS and Mossbauer spectroscopy and CCSEM studies of coals of interest in the CFFLS program, 18:2561 (RA;US)

Chemical Reaction Yield
Integrated coal liquefaction/characterization. Coal structure/liquefaction yield correlation by means of advanced NMR techniques, 18:2537 (RA;US)

Chemical Reactors
Enhanced reactivity and selectivity in coal liquefaction and coprocessing systems. Reduced coal liquefaction process severity through better hydrogen gas-liquid mass transfer, 18:2536 (RA;US)
Optimization of reactor configuration in coal liquefaction: Third quarterly report, 1 April 1992–30 June 1992, 18:2547 (R;US)

Coal Liquids
Coal liquefaction process streams characterization and evaluation: Characterization of coal-derived materials by field desorption mass spectrometry, two-dimensional nuclear magnetic resonance, supercritical fluid extraction, and supercritical fluid chromatography/mass spectrometry, 18:2545 (R;US)

Hydrogen Transfer
Basic process/resource evaluation task. The role of hydrogen during liquefaction using donor and non-donor solvents, 18:2542 (RA;US)
Enhanced reactivity and selectivity in coal liquefaction and coprocessing systems. Cyclic olefins: New donors for coal liquefaction and co-processing systems, 18:2533 (RA;US)

Performance
Basic process/resource evaluation task. Liquefaction of U.S. coals, 18:2543 (RA;US)

Process Solutions
Liquefaction research in pyrolysis, catalysis and coal dissolution. Calculation of physical properties for complex fluids in coal liquefaction, 18:2563 (RA;US)

Research Programs
Overview of research conducted by the Consortium for Fossil Fuel Liquefaction Science, 18:2520 (RA;US)

COAL LIQUIDS
Basic process/resource evaluation task. Coal maceral characterization and liquefaction, 18:2540 (RA;US)
Basic process/resource evaluation task. Liquefaction of U.S. coals, 18:2543 (RA;US)
Coal liquefaction process streams characterization and evaluation: Characterization of coal-derived materials by field desorption mass spectrometry, two-dimensional nuclear magnetic resonance, supercritical fluid extraction, and supercritical fluid chromatography/mass spectrometry, 18:2545 (R;US)
Coal liquefaction process streams characterization and evaluation: Quarterly technical progress report, January 1–March 31, 1992, 18:2544 (R;US)
Integrated coal liquefaction/characterization. Molecular weight determination of coal derived liquids by mass spectrometric techniques, 18:2564 (RA;US)
Lignin-assisted coal depolymerization: [Quarterly] report, March 1, 1992–May 31, 1992, 18:2567 (R;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Calculation of physical properties for complex fluids in coal liquefaction, 18:2563 (RA;US)
Liquefaction research in pyrolysis, catalysis and coal dissolution. Evaluation of residue from the WVU coal extraction process as a disposable hydrotreatment catalyst, 18:2532 (RA;US)
Preconversion catalytic deoxygenation of phenolic functional groups: Quarterly technical progress report, April 1, 1992–June 30, 1992, 18:2518 (R;US)

Screening of processing and upgrading schemes: Task 3, 18:2500 (R;US)
Toxicity studies of mild gasification products, 18:4385 (R;US)

COAL MINERS
Locating buried people in the underground hard coal industry. Final report, 18:2597 (I;DE;In German)

COAL PREPARATION
Characterization of multiphase fluid flow during air-sparged hydrocyclone flotation by x-ray CT: Eighth quarterly report, 14 May 1992–13 August 1992, 18:2496 (R;US)

COAL PREPARATION PLANTS
Baseline design/economics for advanced Fischer-Tropsch technology: Quarterly report, April–June 1992, 18:2546 (R;US)

COAL TAR
Innovative coke oven gas cleaning system for retrofit applications: Quarterly environmental monitoring report No. 1, January 1, 1991–June 30, 1991, 18:2515 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-OIL MIXTURES
See COAL
FUEL SLURRIES

COATINGS
See also PAINTS
Behavior of decontaminable coatings prior to and after exposure to ionizing radiation, 18:3915 (R;DE)

COBALT
Pre-concentration of Cr, Mn, Fe and Co of water sea and analysis by plasma emission spectroscopy - DCP, 18:4242 (I;BR;In Portuguese)
The effect of catalyst preparation on catalytic activity: Final report, December 1, 1988–June 30, 1992, 18:3784 (R;US)

COBALT 60
Annual report of the Environmental Restoration Monitoring and Assessment Program at Oak Ridge National Laboratory for FY 1992: Environmental Restoration Program, 18:4206 (R;US)
Westinghouse Hanford Company environmental surveillance annual report: Calendar year 1991, 18:4212 (R;US)

COBALT ALLOYS
Characterization of solidification and weldability of Fe-29Ni-17Co alloys., 18:3605 (R;US)

COBALT COMPOUNDS
See also COBALT OXIDES
COBALT SILICIDES
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet $CsCo_{0.83}Mg_{0.17}Br_3$, 18:4679 (R;US)

COBALT OXIDES
Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on $Ni_{0.5}Co_{0.5}O$, 18:3568 (R;US)

COBALT SILICIDES
Dependence of buried $CoSi_2$ resistivity on ion implantation and annealing conditions, 18:3658 (R;US)

COGENERATION
Current efficiency of Total Energy (TE) and Combined Heat and Power (CHP) systems, 18:3498 (R;NL;In Dutch)

COORDINATED RESEARCH PROGRAMS
The study of multi-institutional collaborations in high-energy physics: Progress report, January 1989–March 1991, 18:4469 (R;US)
COPOLYMERIZATION
[Transition metal mediated transformations of small molecules]: Progress report, 18:3778 (R;US)
COPOLYMERS
Electrical characterization of electrophoretically coated aluminum samples for photovoltaic concentrator application, 18:3663 (R;US)
COPPER
Behaviour of OFHC copper in highly pure water, 18:3586 (R;IT;In Italian)
Bioleaching of low-grade copper ores using Thiobacillus ferrooxidans, 18:4375 (RA;US)
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver, 18:3808 (R;US)
Effect of oxide particle distribution on the helium-induced fracture of copper, 18:3609 (R;US)
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers, 18:3642 (R;US)
Numerical study of a 50 kA superconducting bus for the NET/ITER model coil test in TOSKA-upgrade, 18:4694 (R;DE)
Photoemission from Ag, Cu, and CsI, 18:3993 (R;US)
Sorption of heavy metals by untreated red fir sawdust, 18:4226 (RA;US)
Stability of superconducting cables for use in large magnet systems, 18:4693 (R;DE;In German)
COPPER 63 TARGET
Charge correlations as a probe of nuclear disassembly, 18:4614 (R;DE)
Statistical fragmentation of Au projectiles at E/A=600 MeV, 18:4613 (R;DE)
Total and 2n-removal cross sections of the neutron-rich isotopes ^{8,9,11}Li, 18:4617 (R;DE)
COPPER ALLOYS
See also COPPER BASE ALLOYS
Atomistic studies of grain boundaries in alloys and compounds: Progress report, July 1990–October 1992, 18:3580 (R;US)
COPPER BASE ALLOYS
Spin density waves in dilute CuMn alloys, 18:4677 (R;US)
COPPER COMPOUNDS
See also COPPER OXIDES
Kinetic studies on metal interactions between water and clay minerals, 18:4246 (RA;DE;In German)
COPPER OXIDES
Flux pinning by 211 precipitates in melt-processed $YBa_2Cu_3O_x$, 18:3612 (R;US)
Microstructural and electronic properties of highly oriented $Tl_{0.5}Pb_{0.5}Sr_2CaCu_2O_7$ films on $LaAlO_3$, 18:3634 (R;US)
Properties of aligned $YBa_2Cu_3O_{7-\delta}$ superconductor as a function of oxygen deficiency δ, 18:3614 (R;US)
The local structure of high-temperature superconductors, 18:4695 (R;US)
COPPER SELENIDE SOLAR CELLS
Low-cost $CuInSe_2$ submodule development: Final subcontract report, 9 July 1990–31 January 1992, 18:2921 (R;US)
CORES (REACTOR)
See REACTOR CORES
CORIUM
Core-concrete interactions using molten urania with zirconium on a limestone concrete basemat: The SURC-1 experiment, 18:3434 (R;US)
Core-concrete interactions with overlying water pools, 18:3357 (RA;US)
Parameter effects on molten debris spreading and coolability, 18:3354 (RA;US)
CORRELATION ENERGY
See ELECTRON CORRELATION
CORROSION PRODUCTS
Solubility and speciation calculations (EQ3/6) for the elements of importance in TVO-92, 18:2810 (R;FI)
COSMIC GAMMA SOURCES
Very high energy gamma ray astrophysics: Technical progress report, May 1, 1990–April 30, 1991, 18:4454 (R;US)
COSMIC RAY DETECTION
Experimental particle physics: Progress report, September 16, 1991–September 30, 1992, 18:4026 (R;US)
COSMOLOGICAL MODELS
Cosmological texture is incompatible with Planck-scale physics, 18:4455 (R;US)
Metastable cosmic strings in realistic models, 18:4512 (R;US)
COSTA RICA
Preliminary reservoir engineering studies of the Miravalles geothermal field, Costa Rica, 18:2944 (R;US)
COUNTERS (RADIATION)
See RADIATION DETECTORS
COUPLED REACTOR CORES
HEU-MEU mixed core experiments in the KUCA, 18:3274 (RA;XA)
COUPLING CONSTANTS
Dressed skeleton expansion and the coupling scale ambiguity problem, 18:4509 (R;US)

CP INVARIANCE
Introduction to physics studies at an asymmetric e^+e^- B-factory, 18:4557 (R;US)
On the origin of the enhancement of CP-violating charge asymmetries in $K^{\pm} \rightarrow 3\pi$ decays predicted from chiral theory, 18:4539 (R;DE)
Solutions to the strong-CP problem in a world with gravity, 18:4489 (R;US)

CRACOW AIC-144 CYCLOTRON
High-voltage feeders for beam extraction system of AIC-144 cyclotron, 18:4000 (R;PL;In Polish)
Isochronous cyclotron AIC-144. Main parameters - application possibilities, 18:3967 (R;PL;In Russian)
Start-up of isochronous cyclotron AIC-144 Sigma on internal beam, 18:3972 (R;PL;In Polish)
Technical conditions of isochronous cyclotron AIC-144 Sigma at start-up on internal beam (d), 18:3968 (R;PL;In Polish)

CREEKS
See STREAMS

CRITICAL ASSEMBLIES

DRINKING WATER
Analysis of toxic elements in food and drinking water by means of neutron activation analysis, 18:3676 (RA;XA)
Residual radioactive contamination from decommissioning: Technical basis for translating contamination levels to annual total effective dose equivalent: Final report: Volume 1, 18:4361 (R;US)
DROPLETS
Burning of a spherical fuel droplet in a uniform subsonic flowfield, 18:3899 (R;US)
Drop oscillation and mass transfer in alternating electric fields: Progress report, May 30, 1991–June 1, 1992, 18:3936 (R;US)
Effects of calcium magnesium acetate on the combustion of coal-water slurries: Twelfth quarterly project status report, 1 June 1992–31 August 1992, 18:2584 (R;US)
Fractional activation of accumulation-mode particles in warm continental stratiform clouds, 18:4108 (R;US)
DUAL ENERGY USE SYSTEMS
See DEUS
DUAL-ISOTOPE SUBTRACTION TECHNIQUE
Reference materials and evaluation of the precision and accuracy of the DLW method, 18:4308 (RA;XA)
DUCTS
A comprehensive yardstick for residential thermal distribution efficiency, 18:3522 (R;US)
DUSTS
Dust induced stimulation of reactive oxygen species release in bovine alveolar macrophages, 18:4420 (RA;DE;In German)
DYES
See also RHODAMINES
Photochemistry and photophysics of solvatochromic dyes with donor-acceptor linkages bound in microdomains of acrylate or peptide polyelectrolytes, 18:3867 (RA;US)
DYMAC SYSTEM
See PLUTONIUM
DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM
See PLUTONIUM
DYNAMICAL GROUPS
Dynamical groups of a particle in a periodic potential, 18:4442 (R;XA)
DYNAMICS (BEAM)
See BEAM DYNAMICS
DYSPROSIUM
X-ray absorption spectroscopy beyond the core-hole lifetime, 18:4653 (R;US)
DYSPROSIUM 161 TARGET
Signature dependence of M1 and E2 transition probabilities for the $i_{13/2}$ and $f_{7/2}$ rotational band in ^{161}Dy, ^{163}Dy, ^{167}Er and ^{173}Yb studied by heavy-ion Coulomb excitation: Annex 17, 18:4597 (RA;XA)
DYSPROSIUM 163 TARGET
Signature dependence of M1 and E2 transition probabilities for the $i_{13/2}$ and $f_{7/2}$ rotational band in ^{161}Dy, ^{163}Dy, ^{167}Er and ^{173}Yb studied by heavy-ion Coulomb excitation: Annex 17, 18:4597 (RA;XA)

FIRS
Genetic structures of forest trees with different levels of damage on permanent observation plots on forest decline in Baden-Wuerttemberg, 18:4393 (RA;DE;In German)

FIRST WALL
Depth profiling of deuterium using nuclear reaction analysis, 18:4739 (R;US)

FISCHER-TROPSCH SYNTHESIS
Baseline design/economics for advanced Fischer-Tropsch technology: Quarterly report, April–June 1992, 18:2546 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, October 1, 1986–December 31, 1986, 18:2508 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, January 1, 1985–March 31, 1985, 18:2502 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, April 1, 1985–June 30, 1985, 18:2503 (R;US)
Micelle-derived catalysts for extended Schulz-Flory: Technical progress report, July 1, 1986–September 30, 1986, 18:2507 (R;US)
The development of a selective ruthenium catalyst: Technical progress report, January 1, 1988–March 31, 1988, 18:2510 (R;US)
The development of a selective ruthenium catalyst: Technical progress report, October 1, 1987–December 31, 1987, 18:2509 (R;US)

FISHES
Clinch River Environmental Restoration Program: Phase 1, Data listing, 18:4251 (R;US)
Ichthyoplankton entrainment study at the SRS Savannah River water intakes for Westinghouse Savannah River Company: Final report, 18:4260 (R;US)
Individual-based modeling of environmental quality effects on early life stages of fish: A case study using striped bass, 18:4234 (R;US)
Strontium and calcium determination in sea fishes in neighborhood of Angra nuclear power plant, 18:3097 (I;BR;In Portuguese)
Toxic and trace elements in foodstuffs in Japan, 18:3683 (RA;XA)
Tritium uptake by fish in a small stream: Revision 1, 18:4261 (R;US)

FISSION NEUTRONS
Energy spectra of fast neutrons by nuclear emulsion method, 18:4640 (I;BR;In Portuguese)

FISSION PRODUCTS
Biological effects of radiation: The induction of malignant transformation and programmed cell death, 18:4371 (R;FI)
Hanford Laboratories Operation monthly activities report, April 1958, 18:3156 (R;US)
On stable nuclei mass charge distribution, 18:4591 (R;UA;In Russian)
Operational air sampling report, January–June 30, 1992, 18:4124 (R;US)

FISSION SPECTRA
Generating and using reactor reference radiation fields, 18:2855 (IA;LY)

FIXATION (WASTE TREATMENT)
See SOLIDIFICATION

FLAMES
Combustion Research Program: Flame studies, laser diagnostics, and chemical kinetics: Final report, 15 July 1987–15 June 1992, 18:3900 (R;US)

FLANGES
Inspection and replacement of Van Stone flanges, B, D, and F piles, 18:3131 (R;US)

FLASKS
See CASKS

FLAVOR MODEL
Hadronization of quark flavour dynamics including three-quark forces, 18:4511 (R;DE)
Radiative rare B decays into higher K-resonances, 18:4541 (R;DE)

FLIES
Biological changes in Musca domestica L., 1758 (Diptera:Muscidae), induced by gamma radiation (^{60} Co), 18:4344 (I;BR;In Portuguese)

FLOODING FLUIDS
See DISPLACEMENT FLUIDS

FLOODS
Determination of 100-year floodplain elevations at Los Alamos National Laboratory, 18:4202 (R;US)

FLOTATION
Characterization of multiphase fluid flow during air-sparged hydrocyclone flotation by x-ray CT: Eighth quarterly report, 14 May 1992–13 August 1992, 18:2496 (R;US)

FLOUR
Neutron activation analysis of toxic elements in meat and farinaceous food of Argentina, 18:3678 (RA;XA)

FLOW (FLUID)
See FLUID FLOW

FLOW BLOCKAGE
Safety analysis - Probabilistic methods, 18:3176 (RA;XA)

FLOW MODELS
THETA - A computer program for the simulation of coupled fluid, heat and solute transport in porous media, 18:4256 (RA;FI;In Finnish)

FLOWMETERS
Fluid flow monitoring device, 18:3054 (PA;US)

FLUE GAS
Mechanistic study of poisoning of DeNoxING catalysts by alcali metals, 18:2976 (R;IT)
Method of activating limestone for enhanced capture of sulfur from post combustion gases, 18:2978 (PA;US)

Utility FGD survey, January–December 1989: Volume 2, Design performance data for operating FGD systems: Part 3, 18:2977 (R;US)

FLUID FLOW
See also TURBULENT FLOW
TWO-PHASE FLOW
Advanced methods and tools in 3-dimensional ground water flow modelling, 18:2782 (RA;FI;In Finnish)
An iterative finite-element collocation method for parabolic problems using domain decomposition, 18:3945 (R;US)
Influence of Prandtl number and effects of disruption shape on the performance of enhanced tubes with the separation and reattachment mechanism, 18:3935 (R;US)
The use of tracer techniques in the study of soil water flows and contaminant transport, 18:4204 (R;GB)
Theory and input requirements for the multidimensional component in RELAP5 for Savannah River Site thermal hydraulic analysis, 18:3119 (R;US)

FLUID MECHANICS
See also HYDRAULICS
Complex temporal and spatial patterns in nonequilibrium processes: Progress report, December 1, 1987–November 30, 1992, 18:4673 (R;US)

Design
Hanford Laboratories Operation monthly activities report, December 1959, 18:2664 (R;US)
Hanford Laboratories Operation monthly activities report, March 1957, 18:2659 (R;US)
Fabrication
Hanford Atomic Products Operation annual report, 1960, 18:2669 (R;US)
'Caramel' - French LEU fuel for research reactors with emphasis on the OSIRIS experience of core conversion, 18:3240 (RA;XA)
Fission Product Release
Accident simulation and consequence analysis in support of MHTGR safety evaluations, 18:3375 (RA;US)
Further data of silicide fuel for the LEU conversion of JMTR, 18:3260 (RA;XA)
Fuel Integrity
Final results from TRIGA LEU fuel post-irradiation examination and evaluation following long term irradiation testing in the ORR, 18:3238 (RA;XA)
Hydraulic tests on dummy fuel elements for JAERI reactors, 18:3236 (RA;XA)
Heat Transfer
Exothermic reactions in U_3O_8 dispersion fuel, 18:3230 (RA;XA)
Inspection
Inspection scheme (Fuel elements for the DR-3 reactor.), 18:3263 (RA;XA)
Specifications for fuel elements with MEU UAl_x-Al fuel for the JMTRC reactor, 18:3267 (RA;XA)
Materials Testing
Hydraulic tests on dummy fuel elements for JAERI reactors, 18:3236 (RA;XA)
Moderately Enriched Uranium
LEU and MEU fuel testing in CEA reactors, 18:3250 (RA;XA)
Modifications
Irradiation of MEU and LEU test fuel elements in DR 3, 18:3255 (RA;XA)
Summary - SAR amendments for testing prototype fuel elements in the FRG-2 reactor, 18:3188 (RA;XA)
Post-Irradiation Examination
Examination of U_3Si_2-Al fuel elements from the Oak Ridge Research Reactor, 18:3249 (RA;XA)
Final report on the irradiation testing and post-irradiation examination of low enriched U_3O_8-Al and UAl_x-Al fuel elements by the Netherlands Energy Research Foundation (ECN), 18:3251 (RA;XA)
Final results from TRIGA LEU fuel post-irradiation examination and evaluation following long term irradiation testing in the ORR, 18:3238 (RA;XA)
Full-sized element irradiations in the Oak Ridge Research Reactor, 18:3246 (RA;XA)
Irradiation in DR 3 of three Danish manufactured LEU silicide test fuel elements, 18:3256 (RA;XA)
Irradiation performance of low-enriched uranium fuel elements, 18:3247 (RA;XA)
LEU and MEU fuel testing in CEA reactors, 18:3250 (RA;XA)
Reliability of LEU fuel, 18:3243 (RA;XA)
The conversion of NRU from HEU to LEU fuel, 18:3253 (RA;XA)
Production
Fuels Preparation Department monthly report, May 1958, 18:3157 (R;US)
Quality Control
'Caramel' - French LEU fuel for research reactors with emphasis on the OSIRIS experience of core conversion, 18:3240 (RA;XA)
Reliability
Reliability of LEU fuel, 18:3243 (RA;XA)
Slightly Enriched Uranium
Safety analyses for HEU and LEU equilibrium cores and HEU-LEU transition core for the IAEA generic 10 MW reactor, 18:3173 (RA;XA)
Specifications
Safety analyses for HEU and LEU equilibrium cores and HEU-LEU transition core for the IAEA generic 10 MW reactor, 18:3173 (RA;XA)
Specifications, 18:3262 (RA;XA)
Specifications for fuel elements with MEU UAl_x-Al fuel for the JMTRC reactor, 18:3267 (RA;XA)
Uranium-zirconium hydride TRIGA-LEU fuel, 18:3237 (RA;XA)
Storage
Fresh fuel storage, 18:2711 (RA;XA)
Nuclear criticality assessment of LEU and HEU fuel element storage, 18:2710 (RA;XA)
Testing
Uranium-zirconium hydride TRIGA-LEU fuel, 18:3237 (RA;XA)
Thermal Analysis
Determination of power limits for technical specifications, 18:3189 (RA;XA)
Transport
Transportation of unirradiated TRIGA-LEU fuel, 18:2703 (RA;XA)
Transport Regulations
Transportation of MTR fuel elements within the Federal Republic of Germany, 18:3277 (RA;XA)
Transportation of fresh fuel elements for Japanese research reactors, 18:2705 (RA;XA)
FUEL FABRICATION PLANTS
Apollo Pennsylvania Nuclear Fuel Facility D&D Project: Quarterly technical progress report, April 1, 1992–June 30, 1992, 18:2829 (R;US)

FUEL GAS
See also NATURAL GAS
High temperature electrochemical separation of H_2S from coal gasification process streams: Quarterly progress report, April 1, 1992–June 30, 1992, 18:3672 (R;US)
Hot gas desulfurization sorbent and method, 18:2554 (PA;US)
Sulfur capture mechanisms, 18:2962 (R;US)
TGA studies on supported sorbents at elevated pressures: Capture mechanisms, 18:2963 (R;US)
The fate of alkali species in advanced coal conversion systems: Final report, 18:2574 (R;US)
Trace contaminants in fixed-bed gasifier gas, 18:2501 (R;US)

FUEL INTEGRITY
Determination of allowable ramp power levels to maintain the mechanical integrity for 14x14, 16x16 and 17x17 KOFAs, 18:3063 (R;KR)

FUEL LOADING
See REACTOR FUELING

FUEL PELLETS
Nerva fuel nondestructive evaluation and characterization equipment and facilities, 18:3294 (R;US)

FUEL PENCILS
See FUEL PINS

FUEL PINS
Summary of specifications for Canadian enriched U-Al pin-type fuel, 18:3268 (RA;XA)

FUEL PLATES
Discussion with National Research Corporation personnel, April 1, 1953, 18:3110 (R;US)

Cladding
Determination of cladding thickness in fuel plates for material test and research reactors (MTR), 18:3269 (RA;XA)

Design
Structural stability of plate-type fuel elements used in US research and test reactors, 18:3235 (RA;XA)

Fabrication
Development of low enrichment MTR fuel at Dounreay, 18:3254 (RA;XA)
Fabrication of medium enriched uranium fuel plate for KUCA critical experiment: Design, fabrication, inspection and transportation, 18:3266 (RA;XA)
Visit by F. N. Rhines of Carnegie Institute of Technology, March 19, 1953, 18:3107 (R;US)

Fission Product Release
Fission product release from alloy, aluminide, oxide, and silicide fuels, 18:3257 (RA;XA)
Release of fission products from irradiated aluminide fuel at high temperatures, 18:3258 (RA;XA)
Release of fission products from miniature fuel plates at elevated temperature, 18:3259 (RA;XA)

Heating
Release of fission products from irradiated aluminide fuel at high temperatures, 18:3258 (RA;XA)

Modifications
Nominal power limits of the HFR for LEU elements with a reduced number of thicker fuel plates, 18:3190 (RA;XA)
Structural stability of plate-type fuel elements used in US research and test reactors, 18:3235 (RA;XA)

Post-Irradiation Examination
Development of low enrichment MTR fuel at Dounreay, 18:3254 (RA;XA)
Full size element irradiations in the FRG-2, 18:3252 (RA;XA)
Miniplate irradiations in the Oak Ridge Research Reactor, 18:3245 (RA;XA)
Post-irradiation examinations of dispersion fuels with reduced enrichment, 18:3244 (RA;XA)

Specifications
Notional specification for MTR fuel plates/tubes at uranium densities up to 1.6 g/cm^3, 18:3265 (RA;XA)
Specifications for fuel plates with LEU U_3Si_2-Al fuel for the Oak Ridge Research Reactor, 18:3264 (RA;XA)

Thermodynamic Properties
Differential thermal analysis and metallographic examinations of U_3Si_2 powder and U_3Si_2/Al (38 w/o) miniplates, 18:3234 (RA;XA)

Thickness
Performance of low-enriched uranium aluminide-aluminum thick-plate fuel elements in the Oak Ridge Research Reactor, 18:3248 (RA;XA)

FUEL REPROCESSING PLANTS
Development of the expert system at the Tokai reprocessing plant, 18:2689 (RA;XA)
Potential safety-related incidents with possible applicability to a nuclear fuel reprocessing plant, 18:2678 (R;US)
Report of the LASCAR forum: Large scale reprocessing plant safeguards, 18:2848 (R;XA)

FUEL ROD CONSOLIDATION
See FUEL RODS

FUEL RODS
100 Area scope of work: Use of enriched slugs for tritium production, 18:3109 (R;US)
ANL slug failure decontamination program: Trip report, 18:3113 (R;US)
ANL slug failure decontamination studies: Trip report, 18:3116 (R;US)
C pile slug rupture detection system, 18:3074 (R;US)
Effect of slug rupture considerations on C Pile power level limits, 18:3144 (R;US)
Photographs of Failure 250, the first C-pile rupture, 18:3148 (R;US)
Production Test No. 305-9-P, poisoning effectiveness and uniformity of myrnalloy slugs: Final report, 18:3128 (R;US)

FUEL SLUGS
See FUEL RODS

FUEL SLURRIES
Advanced Vortexing Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 1, 18:2578 (R;US)
Development of a Vortex Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 4, 18:2581 (R;US)
Development of a Vortexing Combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 3, 18:2580 (R;US)
Development of a vortex combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 6, [1 February 1989–30 April 1989], 18:2582 (R;US)
Development of a vortexing combustor (VC) for space/water heating applications (proof-of-concept model development): Technical progress report No. 2, 1 February–30 April 1988, 18:2579 (R;US)
Effects of calcium magnesium acetate on the combustion of coal-water slurries: Twelfth quarterly project status report, 1 June 1992–31 August 1992, 18:2584 (R;US)
Integrated production/use of ultra low-ash coal, premium liquids and clean char: Technical report, March 1, 1992–May 31, 1992, 18:2497 (R;US)

FUEL STORAGE POOLS
Review of the technical basis and verification of current analysis methods used to predict seismic response of spent fuel storage racks, 18:3437 (R;US)
Sorption and fixation of biotoxic radionuclides on zeolites for decontamination of the spent fuel elements cooling medium, 18:3806 (I;CS;In Czech)

FUEL SUBSTITUTION
First International Alternative Fueled Vehicle Round-Up, 18:3559 (R;US)
Transportation alternatives 92: Alternative fueled vehicles: Proceedings: Volume 2, 18:3521 (R;US)

FUEL SUSPENSIONS
See FUEL SLURRIES

FUEL-CLADDING INTERACTIONS
Reaction behaviour of U_xSi_y-Al and U_6Fe-Al dispersions, 18:3233 (RA;XA)

FUELS (NUCLEAR)
See NUCLEAR FUELS
FULLERENES
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding: Progress report, March 1, 1992–September 30, 1992, 18:3782 (R;US)
The adsorption of C_{60} and the Co-adsorption of C_{60} and H_2O on α-Al_2O_3 $(1\bar{1}02)$-(2×1), 18:3819 (R;US)
FUMES

Contamination
Annual report of the Environmental Restoration Monitoring and Assessment Program at Oak Ridge National Laboratory for FY 1992: Environmental Restoration Program, 18:4206 (R;US)
Application of leaching algorithms and worst-case analysis to assessment of risk to ground water from contaminated soils, 18:4153 (RA;US)
Ground water contamination with inorganic nitrogen in the vicinity of a solid waste landfill, 18:4161 (RA;US)

Decontamination
Removal of hazardous materials: Decontamination of soils and ground water at a hazardous waste disposal site, 18:4162 (RA;US)

Flow Models
A ground water flow analysis for a nuclear waste repository excavated in bedrock, 18:2784 (RA;FI;In Finnish)
Application of the MOC-model to a contaminated groundwater area in Kaerkoelae, 18:4258 (RA;FI;In Finnish)
Development of three-dimensional groundwater flow and transport model, 18:2783 (RA;FI;In Finnish)
Ground water modelling, 18:4210 (R;FI;In Finnish)
Ground water modelling in artificial recharge projects, 18:4257 (RA;FI;In Finnish)
Groundwater model views vs. experience in surface waters, 18:4259 (RA;FI;In Finnish)
Modelling of coupled transport of air, water and heat in unsaturated zone, 18:4253 (RA;FI;In Finnish)
THETA - A computer program for the simulation of coupled fluid, heat and solute transport in porous media, 18:4256 (RA;FI;In Finnish)
Use of groundwater models at the National Board of Waters and the Environment, 18:4211 (RA;FI;In Finnish)
Validation of transport models for use in repository performance assessments: a view illustrated for INTRAVAL test case 1b, 18:2763 (R;GB)

Fluid Flow
Advanced methods and tools in 3-dimensional ground water flow modelling, 18:2782 (RA;FI;In Finnish)
Alternative formulations of the Laplace transform boundary element (LTBE) numerical method for the solution of diffusion-type equations, 18:4203 (R;US)

Geology
Evaluation of structural behavior geological and hydrogeological characteristics: A study on the ground water flow and hydrogeological interaction in fractured rock masses, 18:4200 (R;KR;In Korean)

Hydraulic Conductivity
An evaluation of slug interference tests for aquifer characterization at the Hanford Site, 18:2823 (R;US)

Hydrology
Evaluation of structural behavior geological and hydrogeological characteristics: A study on the ground water flow and hydrogeological interaction in fractured rock masses, 18:4200 (R;KR;In Korean)

Meetings
Ground water modelling, 18:4210 (R;FI;In Finnish)
Monitoring
Chemical sensors and field screening technologies in surface- and ground-water monitoring, 18:4157 (RA;US)
Natural Radioactivity
Radium and radon in groundwater: Health significance and water well development strategies, 18:4168 (RA;US)
Toward a better understanding of the geographic distribution of radon in domestic water supplies, 18:4167 (RA;US)
Radiation Monitoring
Hazelwood Interim Storage Site annual environmental report for calendar year 1991, Hazelwood, Missouri, 18:2832 (R;US)
Maywood Interim Storage Site annual environmental report for calendar year 1991, Maywood, New Jersey: Formerly Utilized Sites Remedial Action Program (FUSRAP) (Maywood Interim Storage Site), 18:2835 (R;US)
New Brunswick Site annual environmental report for calendar year 1991, New Brunswick, New Jersey: Formerly Utilized Sites Remedial Action Program (FUSRAP) (New Brunswick Site), 18:2837 (R;US)
Niagara Falls Storage Site annual environmental report for calendar year 1991, Lewiston, New York, 18:2834 (R;US)
Wayne Interim Storage Site annual environmental report for calendar year 1991, Wayne, New Jersey: Formerly Utilized Sites Remedial Action Program (FUSRAP) (Wayne Interim Storage Site), 18:2836 (R;US)
Radionuclide Migration
An integrated performance measure for environmental restoration at Oak Ridge National Laboratory, 18:2827 (R;US)
Estimates of potential radionuclide migration at the Bullion site, 18:2813 (R;US)
Investigation of groundwater flow zones and contaminant transport in Solid Waste Storage Area 5 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 18:2767 (R;US)
Recent state report: Groundwater programmes of variable density. Study performed within the framework of a programme for safety of contaminated waste repositories in the post-operational phase, 18:2743 (R;DE;In German)
Savannah River Site Environmental Report for 1990: Summary pamphlet, 18:4214 (R;US)
Recharge
Tracing bomb-spike tritium to estimate rates of vertical recharge and pollutant transport through unsaturated glacial till, 18:4166 (RA;US)
Remedial Action
Development of an ultrasonic process for detoxifying groundwater and soil: Laboratory research: Annual report for fiscal year 1991, 18:4151 (R;US)
Groundwater quality assessment/corrective action feasibility plan: Savannah River Laboratory Seepage Basins, 18:4216 (R;US)
Kinetics of in situ bioremediation of Hanford groundwater, 18:2846 (R;US)
Simulant composition for the Mixed Waste Management Facility (MWMF) groundwater remediation project, 18:2825 (R;US)
Rock-Fluid Interactions
Inverse fracture network modelling, 18:4255 (RA;FI;In Finnish)
Modeling fluid-rock interaction at Yucca Mountain, Nevada: A progress report, April 15, 1992, 18:2777 (R;US)
Sampling
Field Sampling and Analysis Plan for the Remedial Investigation of Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Responses to comments, 18:2830 (R;US)
Water Chemistry
Organic acid modeling and model validation: Workshop summary: Final report, 18:4178 (R;US)
GROUND-WATER RESERVES
See AQUIFERS
GROUTING
The effects of radiation (beta/gamma and alpha) on cemented intermediate level waste, 18:3650 (R;GB)
GRR REACTOR
See DEMOCRITUS REACTOR
GUANIDINES
Synthesis, labelling with 131-iodine and control of metaiodobenzylguanidine (mIBG), 18:3890 (R;DZ;In French)
GULF COAST
See US GULF COAST
GUNS
New LANL Group M-7 two-stage gun: Double-diaphragm and wrap-around gas breech, 18:3951 (R;US)

H

H CODES
HGSYSTEM: Dispersion models for ideal gases and hydrogen fluoride tutorial and quick reference guide, 18:4128 (R;GB)
HADRON REACTIONS
Systematics of charm production in hadronic collisions, 18:4615 (R;DE)
HADRON-HADRON INTERACTIONS
See also BARYON-BARYON INTERACTIONS
Cross channels unitarity conditions and equations for form factors, 18:4553 (R;UA)
Systematics of charm production in hadronic collisions, 18:4615 (R;DE)
HADRONS
See also BARYONS
MESONS
Workshop on hadron structure from photo-reactions at intermediate energies: Proceedings, 18:4526 (R;US)
HAFNIUM
Chemical effects in x-ray emission spectra, 18:3891 (I;BR;In Portuguese)
HAFNIUM 180
Differential perturbed angular correlation: use of physico-chemical study of some hafnium complexes derivates of hydroxy acids and EDTA, 18:4657 (I;BR;In Portuguese)
HAFNIUM 181
Differential perturbed angular correlation: use of physico-chemical study of some hafnium complexes derivates of hydroxy acids and EDTA, 18:4657 (I;BR;In Portuguese)
HAFNIUM COMPLEXES
Differential perturbed angular correlation: use of physico-chemical study of some hafnium complexes derivates of hydroxy acids and EDTA, 18:4657 (I;BR;In Portuguese)
HAIR
Analytical quality control in studies of environmental exposure to mercury, 18:3714 (RA;XA)
Determination of total mercury and methylmercury in human head hair by radiochemical methods of analysis, 18:3709 (RA;XA)
Intake of mercury through fish consumption, 18:3713 (RA;XA)
Preparation of standard hair material and development of analytical methodology, 18:3708 (RA;XA)
Study on mercury level in scalp hair of typical human populations exposed to mercury in China by NAA and other techniques, 18:3711 (RA;XA)
Total mercury and methylmercury levels in pregnant women, nursing women and preschool children resident in fishing villages in the eighth region of Chile, 18:3710 (RA;XA)
HALL EFFECT
Problems in particle theory: Technical report 1991–1992, 18:4487 (R;US)
The constraint for the lowest Landau level and the effective field theory approach for the fractional quantum hall system, 18:4501 (R;XA)
HALOGENATED ALIPHATIC HYDROCARBONS
See also CHLORINATED ALIPHATIC HYDROCARBONS
Highly volatile halogenated hydrocarbons in subsurface systems. Biotic-abiotic degradation and elimination. A literature study, 18:4187 (I;DE;In German)
HAM

HANFORD PRODUCTION REACTORS
Design scope: Activated silica-alum water treatment facilities, reactor areas B, D, F, DR and H, 18:3143 (R;US)
Control Elements
Hanford safety rod snubber, 18:3300 (R;US)
Cooling Ponds
Effluent system modifications – 100-B/C, 18:3089 (R;US)
Flanges
Inspection and replacement of Van Stone flanges, B, D, and F piles, 18:3131 (R;US)
Fuel Rods
Photographs of Failure 250, the first C-pile rupture, 18:3148 (R;US)
Production Test No. 305-9-P, poisoning effectiveness and uniformity of myrnalloy slugs: Final report, 18:3128 (R;US)
Removal of ruptured slug from tube No. 2169-B, 18:3139 (R;US)
Hydraulics
C-Pile recommended flow – Pressure characteristic curve and orifice pattern, 18:3140 (R;US)
Loss Of Coolant
Consequences of a production reactor accident, 18:3310 (R;US)
Modifications
Hazards summary report – Projects CG-558 and CG-600 reactor plant modifications: Volume 1, Revision, 18:3308 (R;US)
Pile level objectives, 18:3138 (R;US)
Pile modification resulting in increased power levels, 18:3137 (R;US)
Process tubes at B Pile, 18:3129 (R;US)
Operation
Hanford Laboratories Operation monthly activities report, June 1959, 18:3158 (R;US)
Production
Increased production study B, D, DR, F, H and C reactors, 18:3160 (R;US)
Productivity
1953 at Hanford, 18:3151 (R;US)
1955 at Hanford, 18:3153 (R;US)
Radiation Monitoring
Reactor Section, Radiation Monitoring Sub-Section monthly report (administrative), January 1954, 18:3306 (R;US)
Reactor Section, Radiaton Monitoring Sub-Section monthly report, December 1954, 18:3307 (R;US)
Radioactive Effluents
Contamination control – Columbia River: Monthly report, May 1966, 18:2816 (R;US)
Reactor Section, Radiation Monitoring Sub-Section monthly report (administrative) November 1954: Rough draft, 18:3152 (R;US)
Reactivity
Production test-105-55-P – Reactivity of the B Pile under shutdown conditions: Interim report, 18:3072 (R;US)
Reactor Channels
Evaluation of anodic films on process tube exteriors, 18:3146 (R;US)
Reactor Cooling Systems
Increased process water pressure to 105 buildings, 18:3136 (R;US)
Maximum capacities of the 100-B water plant, 18:3149 (R;US)
Reactor Fueling
Preliminary hazards review operational charge-discharge for Hanford reactors, 18:3309 (R;US)
Time requirements for current discharge operations, 18:3130 (R;US)
Reactor Monitoring Systems
C pile slug rupture detection system, 18:3074 (R;US)
Reactor Operation
A review of water treatment technology as applied in the 100 Areas, Hanford Works, 18:3135 (R;US)
Effect of slug rupture considerations on C Pile power level limits, 18:3144 (R;US)
Hanford Atomic Products Operation, monthly report, July 1956, 18:3154 (R;US)
Hanford Laboratories Operation monthly activities report, April 1958, 18:3156 (R;US)
Irradiation Processing Department monthly record report, March 1960, 18:3161 (R;US)
Irradiation Processing Department monthly record report, October 1957, 18:3155 (R;US)
Irradiation Processing Department monthly report, April 1960, 18:3162 (R;US)
Irradiation Processing Department monthly report, December 1961, 18:3168 (R;US)
Irradiation Processing Department monthly report, July 1960, 18:3164 (R;US)
Irradiation Processing Department monthly report, March 1962, 18:3169 (R;US)
Irradiation Processing Department monthly report, May 1960, 18:3163 (R;US)
Irradiation Processing Department monthly report, May 1961, 18:3166 (R;US)
Irradiation Processing Department monthly report, October 1961, 18:3167 (R;US)
Operating limits – Hanford Production Reactors, 18:3075 (R;US)
Pile operation at higher power, 18:3134 (R;US)
Pile power level, 18:3125 (R;US)
Production test number 105-519-E – Raising permissible outlet water temperatures of selected tubes at C Pile, 18:3150 (R;US)
Reactor power level limits, 18:3311 (R;US)
Recommended C Pile power level limits, 18:3141 (R;US)
Reactor Physics
Hanford Laboratories Operation monthly activities report, February 1960, 18:2665 (R;US)
Hanford Laboratories Operation monthly activities report, July 1959, 18:3159 (R;US)
Reactor Safety
Application of Reactor Safeguard Committee formula, 18:3305 (R;US)
Hazards summary report – Projects CG-558 and CG-600 reactor plant modifications: Volume 1, Revision, 18:3308 (R;US)
Reactor Start-Up
B Pile Start-Up Program, 18:3132 (R;US)
Start-up of the 100-B pile following 1569-B tube failure, 18:3133 (R;US)
Water treatment during C Pile start up, 18:3145 (R;US)
Temperature Distribution
Procedure for improving temperature distribution via rods and columns – B Pile, 18:3126 (R;US)
Water Chemistry
100 Areas water treatment specifications, 18:3142 (R;US)
Correlation analysis of water in 107 F, 18:3123 (R;US)
HANFORD RESERVATION
Baseline Ecology
Status of birds at the Hanford Site in southeastern Washington: Revision 1, 18:2824 (R;US)
Environment
Hanford Site environmental data for calendar year 1991: Surface and Columbia River, 18:4140 (R;US)

Westinghouse Hanford Company environmental surveillance annual report: Calendar year 1991, 18:4212 (R;US)

Ground Water
Kinetics of in situ bioremediation of Hanford groundwater, 18:2846 (R;US)

Information
Declassifications requested by the Technical Steering Panel of Hanford documents produced 1944–1960: Hanford Environmental Dose Reconstruction Project, 18:4368 (R;US)

Information Dissemination
Meeting the challenge of responding to stakeholder information needs: A program model, 18:4835 (R;US)

Laboratories
Maintenance Implementation Plan for the 222-S Laboratory, 18:3930 (R;US)

Management
Hanford Atomic Products Operation, monthly report, July 1956, 18:3154 (R;US)

Operation
1953 at Hanford, 18:3151 (R;US)
1955 at Hanford, 18:3153 (R;US)
200 Areas Operation monthly report, December 1967, 18:2671 (R;US)
200 Areas Operation monthly report, December 1970, 18:2677 (R;US)
200 Areas Operation monthly report, February 1968, 18:2673 (R;US)
200 Areas Operation monthly report, January 1968, 18:2672 (R;US)
200 Areas Operation monthly report, September 1969, 18:2674 (R;US)

Pollution Abatement
Executive summary, Hanford Site Pollution Prevention Plan, 18:2815 (R;US)

Radioactive Effluents
Contamination control – Columbia River: Monthly report, May 1966, 18:2816 (R;US)
Integrated Task Plans for the Hanford Environmental Dose Reconstruction Project, FY 1992 through May 1994, 18:4364 (R;US)
Parameters used in the environmental pathways (DESCARTES) and radiological dose (CIDER) modules of the Hanford Environmental Dose Reconstruction Integrated Codes (HEDRIC) for the air pathway: Hanford Environmental Dose Reconstruction Project, 18:4367 (R;US)
Project Management Plan for the Hanford Environmental Dose Reconstruction Project, 18:4365 (R;US)

Radioactive Waste Facilities
303-K Radioactive Mixed-Waste Storage Facility closure plan: Revision 1, 18:2736 (R;US)
304 Concretion Facility Closure Plan: Revision 1, 18:2735 (R;US)
3718-F Alkali Metal Treatment and Storage Facility Closure Plan, 18:2737 (R;US)

Radioactive Waste Storage
Westinghouse Hanford Company plan for certifying newly generated contact-handled transuranic waste for emplacement in the Waste Isolation Pilot Plant, 18:2792 (R;US)

Remedial Action
RCRA facility investigation/corrective measures study work plan for the 100-DR-1 operable unit, Hanford Site, Richland, Washington, 18:2838 (R;US)
Remedial investigation/feasibility study work plan for the 100-KR-1 operable unit, Hanford Site, Richland, Washington, 18:2839 (R;US)

Site Characterization
RCRA facility investigation/corrective measures study work plan for the 100-DR-1 operable unit, Hanford Site, Richland, Washington, 18:2838 (R;US)
Remedial investigation/feasibility study work plan for the 100-KR-1 operable unit, Hanford Site, Richland, Washington, 18:2839 (R;US)

Tanks
Development of simulated tank wastes for the US Department of Energy's Underground Storage Tank Integrated Demonstration, 18:2772 (R;US)

Toxic Materials
1991 toxic chemical release inventory: Emergency Planning and Community Right-To-Know Act of 1986, Section 313, 18:4101 (R;US)

HAPO
Operation
Chemical Processing Department monthly report for April 1958, 18:2683 (R;US)

HELIUM 4 TARGET
One-nucleon integrals of overlap of wave functions of lightest nuclei, 18:4590 (R;UA;In Russian)

HELIUM COOLED REACTORS
Potential applications of high temperature helium, 18:3018 (R;US)

HELIUM IONS
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles: Annual progress report, 15 September 1991–14 September 1992, 18:4663 (R;US)

HEMICELLULOSE
See also XYLANS
Hemicellulose bioconversion to polyanionic heteropolysaccharides, 18:2872 (RA;US)
On fermentability of nafion catalyzed hemicellulose hydrolyzates, 18:2871 (RA;US)

HERA STORAGE RING
Photon induced reactions at HERA, 18:4530 (R;DE)

HETEROJUNCTIONS
Effect of planar magnetic field on electron transport properties of n-AlGaAs/GaAs heterojunction and photoluminescence measures in GaAs samples, 18:4702 (I;BR;In Portuguese)

HEXANE
The effect of rhenium, sulfur and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies, 18:3812 (R;US)

HEXANOIC ACID
Mixed- and plug-flow performances of an anaerobic biofilter treating 2-ethylhexanoic acid, 18:2902 (RA;US)

HFR REACTOR
Engineered safety features against LOCA for the High Flux Reactor - Petten, 18:3180 (RA;XA)
Final report on the irradiation testing and post-irradiation examination of low enriched U_3O_8-Al and UAl_x-Al fuel elements by the Netherlands Energy Research Foundation (ECN), 18:3251 (RA;XA)
Nominal power limits of the HFR for LEU elements with a reduced number of thicker fuel plates, 18:3190 (RA;XA)

HFS
See HYPERFINE STRUCTURE

HIGGS BOSONS
One loop corrections to the lightest Higgs mass in the minimal η model with a heavy Z', 18:4564 (R;DE)
Screening of large exotic scales in the light Higgs mass bound for a general class of supersymmetric models, 18:4565 (R;DE)

HIGH ALTITUDE (STRATOSPHERE)
See STRATOSPHERE

HIGH ENERGY PHYSICS
Experimental studies of elementary particle interactions at high energies: Technical progress report, 18:4546 (R;US)
Harvard University High Energy Physics progress report, 18:4471 (R;US)
High energy physics, 18:4474 (R;US)
High energy physics research: Technical progress report, 18:4472 (R;US)
Research in elementary particle physics: Annual report, January 1–October 31, 1992, 18:4477 (R;US)
Research in particle physics: Progress report, June 1, 1992–January 31, 1993, 18:4473 (R;US)
Research program in particle physics: Progress report, January 1, 1992–December 1992, 18:4468 (R;US)
Santa Cruz Institute for Particle Physics (SCIPP), 18:4476 (R;US)
The study of multi-institutional collaborations in high-energy physics: Progress report, January 1989–March 1991, 18:4469 (R;US)
[High energy physics research]: Annual performance report, December 1, 1991–November 30, 1992, 18:4475 (R;US)
[Research programs on elementary particle and field theories and superconductivity]: Technical progress report, June 1, 1991–October 1, 1992, 18:4470 (R;US)

HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY

HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES

HIGH FLUX REACTOR PETTEN
See HFR REACTOR

HIGH PRESSURE
Study on the quantitative rod internal pressure design criterion, 18:3062 (R;KR)

HIGH TEMPERATURE GAS COOLED AND GRAPHITE MODERATED REACTORS
See HTGR TYPE REACTORS

HIGH-BETA PLASMA
High beta and second region stability analysis and ICRF edge modeling: Progress report, March 15, 1988–May 14, 1989, 18:4711 (R;US)

HIGH-LEVEL RADIOACTIVE WASTES
Development of simulated tank wastes for the US Department of Energy's Underground Storage Tank Integrated Demonstration, 18:2772 (R;US)
Evaluation of structural behavior, geological and hydrogeological characteristics: A study on the structural behavior of underground openings considering the effect of excavation, 18:2750 (R;KR;In Korean)
Hanford Waste Vitrification Plant Quality Assurance Program description: Overview and applications: Revision 2, Part 1, 18:2788 (R;US)
Integrated DWPF Melter System (IDMS) campaign report: The first two noble metals operations, 18:2802 (R;US)
Method of calculation of heat generation rates for DWPF glass: Revision 1, 18:2800 (R;US)
Radioactive demonstration of DWPF product control strategy, 18:2804 (R;US)
Relative yields of U-235 fission products measured in a high level radioactive sludge at Savannah River Site, 18:2797 (R;US)
Retrieval technology development for Hanford double-shell tanks, 18:2771 (R;US)
Specialized video systems for use in waste tanks: Revision 1, 18:2798 (R;US)
Strategy for OCRWM to provide training assistance to state, tribal, and local governments, 18:2699 (R;US)
Upgrade activities for the Criticality Safety Program of Hanford High-Level Radioactive Waste Tank Farm, 18:2790 (R;US)

HIGH-PURITY GE DETECTORS
Measurement of ^{125}I K x and 35.5 keV photon emission probabilities, 18:4029 (R;PL)

HIGH-TC SUPERCONDUCTORS
Apparatus and method for critical current measurements, 18:3639 (PA;US)
Electronic structure and fermiology of high temperature superconductors: Theoretical summary, 18:3613 (R;US)
Flux flow, pinning, and resistive behavior in superconducting networks: Annual progress report, May 1, 1992–April 30, 1993, 18:3618 (R;US)
High temperature superconductivity: Concept, preparation and testing of high Tc superconductor compounds, and applications, 18:4687 (R;SY;In Arabic)
Magnetic studies of current conduction and flux pinning in high-T_c cuprates: Virgin, irradiated, and oxygen deficient materials, 18:3615 (R;US)

Superconducting materials performance report, May 1, 1992–February 28, 1993, 18:3620 (R;US)
The local structure of high-temperature superconductors, 18:4695 (R;US)
X-ray studies of microstructures in semiconductors and superconducting materials, 18:3622 (R;US)
[Research programs on elementary particle and field theories and superconductivity]: Technical progress report, June 1, 1991–October 1, 1992, 18:4470 (R;US)
[Strongly interacting fermion systems] annual progress report, November 15, 1992–November 14, 1993, 18:4690 (R;US)

HIGHWAYS
See ROADS

HILACS
ILSE: The next step toward a heavy ion induction accelerator for inertial fusion energy, 18:4752 (R;US)

HISTAMINE
Effect of the histaminergic antagonist over the pulmonary oedema growth in P. berghei - infected mice, 18:4319 (I;BR;In Portuguese)

HITREX-2 REACTOR
See ZERO POWER REACTORS

HOLOGRAPHY
Pulse holographic measurement techniques, 18:3949 (R;KR;In Korean)

HORDEUM
See BARLEY

HORIZONTAL AXIS TURBINES
Elastic dynamics of a complete wind turbine structure: Theoretical development, 18:2955 (R;US)
The dynamic loads tests of the Westinghouse 600 kW wind turbine, 18:2957 (R;US)

HOSES
High flexibility, noncollapsing light weight hose, 18:3053 (PA;US)

HOT GAS CLEANUP
TGA studies on supported sorbents at elevated pressures: Capture mechanisms, 18:2963 (R;US)

HOT PLASMA
Strong refraction effects at optical probing of high-density plasma, 18:4734 (R;PL)

HOUSES
Component-integrated heating system and building services for future construction concepts (hybrid heating systems) - integration of plant and solar components. Interim report, 18:3526 (R;DE;In German)
Monitoring conservative retrofits in single family buildings: Final technical report, 18:3525 (R;US)
Radon quantification in dwellings of different construction located in Pichincha Province, 18:4133 (I;EC;In Spanish)

HTGR TYPE REACTORS
Accident simulation and consequence analysis in support of MHTGR safety evaluations, 18:3375 (RA;US)
Magnitude and reactivity consequences of accidental moisture ingress into the Modular High-Temperature Gas-Cooled Reactor core, 18:3299 (R;US)
Potential applications of high temperature helium, 18:3018 (R;US)
Status and covariance files of the scattering matrix of graphite, 18:4637 (R;US)

HUBBARD MODEL
Ground-state energy for 1D (t,U,X)-model at low densities, 18:4651 (R;XA)

HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN POPULATIONS
See also MINORITY GROUPS
A simulation of the transport and fate of radon-220 derived from thorium-232 low-level waste in the near-surface zone of the Radioactive Waste Management Site in Area 5 of the Nevada Test Site, 18:2733 (R;US)
Co-ordinated research programme on assessment of environmental exposure to mercury in selected human populations as studied by nuclear and other techniques: Report on the first research co-ordination meeting, Vienna, Austria, 10-13 June 1991, 18:3707 (R;XA)
Commercial production and distribution of fresh fruits and vegetables: A scoping study on the importance of produce pathways to dose: Hanford Environmental Dose Reconstruction Project, 18:4366 (R;US)
Declassifications requested by the Technical Steering Panel of Hanford documents produced 1944–1960: Hanford Environmental Dose Reconstruction Project, 18:4368 (R;US)
Integrated Task Plans for the Hanford Environmental Dose Reconstruction Project, FY 1992 through May 1994, 18:4364 (R;US)
Iodine-131 releases from the Hanford Site, 1944–1947: Volume 1, Text: Hanford Environmental Dose Reconstruction Project, 18:4369 (R;US)
Iodine-131 releases from the Hanford Site, 1944–1947: Volume 2, Data: Hanford Environmental Dose Reconstruction Project, 18:4370 (R;US)
Measuring program of the Federal Republic of Germany. Results of the whole-body counting in Russia during the period of June 17 to October 4, 1991, 18:4360 (R;DE;In German)
Parameters used in the environmental pathways (DESCARTES) and radiological dose (CIDER) modules of the Hanford Environmental Dose Reconstruction Integrated Codes (HEDRIC) for the air pathway: Hanford Environmental Dose Reconstruction Project, 18:4367 (R;US)
Project Management Plan for the Hanford Environmental Dose Reconstruction Project, 18:4365 (R;US)
Radionuclide air emissions report for the Hanford Site: Calendar year 1991, 18:2814 (R;US)
Savannah River Site Environmental Report for 1990: Summary pamphlet, 18:4214 (R;US)
Study on mercury level in scalp hair of typical human populations exposed to mercury in China by NAA and other techniques, 18:3711 (RA;XA)
Total mercury and methylmercury levels in pregnant women, nursing women and preschool children resident in fishing villages in the eighth region of Chile, 18:3710 (RA;XA)

HUMANS
See HUMAN POPULATIONS

HUMIC ACIDS
Organic acid modeling and model validation: Workshop summary: Final report, 18:4178 (R;US)

HUNGARY
Behaviour and distribution of toxic elements in fly-ash particulates, 18:3690 (RA;XA)

HYBRID ELECTRIC-POWERED VEHICLES
Development of test procedures for hybrid/electric vehicles, 18:3557 (R;US)

HYDRATED ELECTRONS
See SOLVATED ELECTRONS

HYDRAULIC RAMS
See PUMPS

HYDRAULICS
Developmental assessment of the multidimensional component in RELAP5 for Savannah River Site thermal hydraulic analysis, 18:3118 (R;US)
Theory and input requirements for the multidimensional component in RELAP5 for Savannah River Site thermal hydraulic analysis, 18:3119 (R;US)

HYDROCARBONS
See also ALKANES
ALKENES
ALKYNES
BENZENE
BENZOPYRENE
CAROTENOIDS
NAPHTHALENE
POLYCYCLIC AROMATIC HYDROCARBONS
TOLUENE
A chemical kinetic model of hydrocarbon generation from the Bakken Formation, Williston Basin, North Dakota, 18:2601 (R;US)
Effects of delocalization on intrinsic barriers for H-atom transfer: Implications for the radical hydrogen transfer reaction, 18:3815 (R;US)

The Natural Gas Vehicle Challenge '92: Exhaust emissions testing and results, 18:3558 (R;US)

HYDROCHLORIC ACID
Acid recovery from etching effluents by diffusion dialysis, 18:3536 (RA;US)

HYDROCYCLONES
See CYCLONE SEPARATORS

HYDROFLUORIC ACID
Development and validation of atmospheric dispersion models for ideal gases and hydrogen fluoride: Part 2, HGSYSTEM program user's manual, 18:4129 (R;GB)
HGSYSTEM: Dispersion models for ideal gases and hydrogen fluoride tutorial and quick reference guide, 18:4128 (R;GB)
Low energy ion-molecule reactions and chemiionization kinetics: Progress report, February 1, 1992–January 31, 1993, 18:3788 (R;US)

HYDROGEN
AGFA differential cross sections for the excitation $1s^2S^e \rightarrow 2s^2Se$ transitions in H by electron impact at 1 Rydberg, 18:4666 (R;XA)
Comparisons between HDR-H_2-distribution experiments E11.2 and E11.4, 18:3349 (RA;US)
Design of the internal geometry of an advanced containment for mitigating deflagration overpressures, 18:3408 (RA;US)
Development of an electrochemical hydrogen separator, 18:3671 (R;US)
Excited-state energy- and electron-transfer reactions in multimetal systems, 18:3850 (RA;US)
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles: Annual progress report, 15 September 1991–14 September 1992, 18:4663 (R;US)
Mitigation/remediation concepts for Hanford Site flammable gas generating waste tanks, 18:2789 (R;US)
Overview of NUPEC containment integrity project, 18:3413 (RA;US)
Results of recent NUPEC hydrogen related tests, 18:3348 (RA;US)

HYDROGEN 1 MINUS BEAMS
H^- ions production in a discharge plasma and construction of some types of ion sources, 18:4008 (R;PL;In Polish)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS 1 PLUS
H^+ impact ionization of Ar, 18:4667 (R;XA)

HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS

HYDROGEN NITRATES
See NITRIC ACID

HYDROGEN PHOSPHATES
See PHOSPHORIC ACID

HYDROGEN PRODUCTION
Immobilized cells of a unicellular green alga and a photosynthetic bacterium for use in a biophotolysis system, 18:2859 (RA;US)
Photochemically induced charge separation and hydrogen evolution in microporous solids, 18:3828 (RA;US)

HYDROGEN SILICATES
See SILICIC ACID

HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Collection of VLE data for acid gas—alkanolamine systems using fourier transform infrared spectroscopy: Phase 2, October 1, 1991–September 30, 1992, 18:2623 (R;US)
High temperature electrochemical separation of H_2S from coal gasification process streams: Quarterly progress report, April 1, 1992–June 30, 1992, 18:3672 (R;US)
Hot gas desulfurization sorbent and method, 18:2554 (PA;US)
Influence of hydrogen sulfide on the growth and metabolism of Butyribacterium methylotrophicum and Clostridium acetobutylicum, 18:4374 (RA;US)
Innovative coke oven gas cleaning system for retrofit applications: Quarterly environmental monitoring report No. 1, January 1, 1991–June 30, 1991, 18:2515 (R;US)
System for recovering sulfur from gases, especially natural gas: Final report, February 1991–July 1992, 18:2626 (R;US)

HYDROLASES
Mycelia-associated β-xylosidase in pellets of Aspergillus sps., 18:4268 (RA;US)

HYDROLOGY
Hydrogeologic, hydrogeochemical and isotopic studies of mineral and thermal waters from Aguas de Lindoia and Lindoia, SP, 18:4244 (I;BR;In Portuguese)

HYDROXYL RADICALS
The selectivity in the reactions of hydrated electrons (e_{aq}) and hydroxyl radicals (OH) with solutions of gly-gly irradiated with ^{60}Co-gamma ray, 18:3889 (IA;LY)

HYDROXYPROPIONIC ACID-ALPHA
See LACTIC ACID

HYPERFINE STRUCTURE
The hyperfine structure - a message from the inner circle, 18:4671 (R;SE)

LIQUID METALS
Fundamental studies of fluid mechanics and stability in porous media: Progress report, 18:3937 (R;US)
LITHIUM
Change of solar cell element properties influenced by adsorbed atoms, 18:2915 (R;UA;In Russian)
LITHIUM 11
Total and 2n-removal cross sections of the neutron-rich isotopes ^{8,9,11}Li, 18:4617 (R;DE)
LITHIUM 11 REACTIONS
Total and 2n-removal cross sections of the neutron-rich isotopes ^{8,9,11}Li, 18:4617 (R;DE)
LITHIUM 8 REACTIONS
Total and 2n-removal cross sections of the neutron-rich isotopes ^{8,9,11}Li, 18:4617 (R;DE)
LITHIUM 9 REACTIONS
Total and 2n-removal cross sections of the neutron-rich isotopes ^{8,9,11}Li, 18:4617 (R;DE)
LITHIUM BROMIDES
LIMENU: Menu driven program determining properties of aqueous lithium bromide solutions, 18:4789 (CM;US)
LITHIUM HYDRIDES
Preparation and properties of lithium hydride, 18:3656 (R;DE)
LITHIUM OXIDES
BEATRIX-II: In situ tritium recovery from Li_2O and Li_2ZrO_3 irradiated in a fast neutron flux, 18:4753 (R;US)
Fusion neutronics experiments and analysis: Progress report, November 1, 1991–October 31, 1992, 18:4743 (R;US)
Transient radiation effects in annealed proton exchange $LiNbO_3$ and $LiTaO_3$ waveguides, 18:4046 (R;US)
LIVER
Hepatic protein metabolism in man, 18:4309 (RA;XA)
Metabolic tracer studies with nitrogen-15 in children, 18:4311 (RA;XA)
LIVER CIRRHOSIS
Prognostic significance of protein-calorie malnutrition in post-virus hepatitis cirrhosis and the design of diet therapy based on Chinese food using isotope tracers, 18:4310 (RA;XA)
LMFBR TYPE REACTORS
See also EBR-2 REACTOR
Distributed expert systems for nuclear reactor control, 18:3070 (R;US)
Inherently effective shutdown system with Curie point controlled sensor/switch unit, 18:3024 (R;DE)
On the development of fast breeder reactors and the use of thorium in Brazil, 18:3021 (R;BR;In Portuguese)
Overview of NUPEC containment integrity project, 18:3413 (RA;US)
TRIAL: 3-d reaction rates from 2-d flux sets, 18:4794 (CM;US)
LOADING (REACTOR)
See REACTOR FUELING
LOCA

LOSS OF COOLANT
Intersystem LOCA risk assessment: Methodology and results, 18:3341 (RA;US)
Small break LOCA RELAP5/MOD3 uncertainty quantification: Bias and uncertainty evaluation for important phenomena, 18:3386 (RA;US)
LOSS OF FLUID TEST REACTOR
See LOFT REACTOR
LOW-LEVEL RADIOACTIVE WASTES
304 Concretion Facility Closure Plan: Revision 1, 18:2735 (R;US)
A simulation of the transport and fate of radon-220 derived from thorium-232 low-level waste in the near-surface zone of the Radioactive Waste Management Site in Area 5 of the Nevada Test Site, 18:2733 (R;US)
Dry active waste incineration by electric heating: ENEL pilot plant performance, 18:2742 (R;IT;In Italian)
In-tank evaporator demonstrations during 1990/1991 at the ORNL Melton Valley Storage Tanks, 18:2770 (R;US)
Investigation of groundwater flow zones and contaminant transport in Solid Waste Storage Area 5 at Oak Ridge National

Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 18:2767 (R;US)
Pollution prevention measures implemented at the Lawrence Livermore National Laboratory's Site 300 facility, 18:2729 (RA;US)
Preliminary report on the ecological assessment of Waste Area Grouping 5 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 18:2766 (R;US)
Risk characterization data manual for inactive liquid low-level waste tank systems at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 18:2768 (R;US)
Study on the establishment of technical standards of radioactive wastes, 18:2852 (R;KR;In Korean)
Summary of expenditures of rebates from the low-level radioactive waste surcharge escrow account for calendar year 1991: Report to Congress in response to Public Law 99-240, 18:2731 (R;US)
The Hybrid Treatment Process for mixed radioactive and hazardous waste treatment, 18:2773 (R;US)

LUNGS
Effect of the histaminergic antagonist over the pulmonary oedema growth in P. berghei - infected mice, 18:4319 (I;BR;In Portuguese)
Effects of outdoor and indoor air pollution on lung function, bronchial hyperreactivity, risk of pulmonary disease and course of disease, 18:4412 (RA;DE;In German)
Study of the behaviour of the yellow cake dissolution in simulated lung fluid, 18:4353 (I;BR;In Portuguese)
Study with radio aerosol of DTPA technetium-99 m in individuals with pulmonary disease by amiodarone, 18:4349 (I;BR;In Portuguese)

LYMPHOCYTES
Analysis of the numbers of B, T and subpopulation lymphocytes in patients with breast cancer submitted to a different radiotherapy schedules, 18:4352 (I;BR;In Portuguese)
Cytogenetic studies in workers with chronic occupational radiation exposure, 18:4339 (I;BR;In Portuguese)

LYMPHOID CELLS
See LYMPHOCYTES

M

M CODES
MEOR4D: Measurement of interfacial tension by use of pendant drop video techniques, 18:4788 (CM;US)
MEPAS2.3G: Multimedia Environmental Pollutant Assessment System, 18:4785 (CM;US)

MACHINE TOOLS
Evaluation of Machine Guarding course taught in Chicago, Illinois June 2, 1992–June 4, 1992, 18:3923 (R;US)
Evaluation of Machine Guarding pilot course taught in Idaho Falls, Idaho, June 23, 1992–June 25, 1992, 18:4433 (R;US)

MACROPHAGES
Combined effects of gases and particles on alveolar macrophages in vitro, 18:4421 (RA;DE;In German)
Dust induced stimulation of reactive oxygen species release in bovine alveolar macrophages, 18:4420 (RA;DE;In German)
Investigations on lucigenin-enhanced chemiluminescence of alveolar macrophages following exposure to exogenous noxious agents, 18:4419 (RA;DE;In German)

MAGNESIUM
Chemical effects in x-ray emission spectra, 18:3891 (I;BR;In Portuguese)

MAGNESIUM COMPOUNDS
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet $CsCo_{0.83}Mg_{0.17}Br_3$, 18:4679 (R;US)
Alternative formulations of regenerable flue gas cleanup catalysts: Progress report, March 1, 1992–May 31, 1992, 18:2975 (R;US)
Solid state, surface and catalytic studies of oxides: Annual progress report, January 1, 1992–December 31, 1992, 18:3785 (R;US)

MAGNET COILS
Review of NB_3 SN magnets completed or under manufacture and relevant for future fusion magnets, 18:4749 (R;GB)

MAGNETIC COILS
See MAGNET COILS

MAGNETIC FIELDS
Effects of 60-Hz electric and magnetic fields on operant and social behavior and on neuroendocrine system of nonhuman primates: Draft final report, October 1, 1988–December 31, 1992, 18:4429 (R;US)
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Social behavior portions of Experiments III and IV: Quarterly report No. 39, 18:4430 (R;US)
Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Quarterly report 40, Operant behavior: Experiments 3, 4, and 4A, 18:4431 (R;US)
Magnetic field measurements of full length 50 mm aperture SSC dipole magnets at Fermilab, 18:3997 (R;US)
Magnetic field perturbation in proton MR imaging - A study of a contrast agent and of distortions due to metallic implants, 18:4288 (R;SE)
Mapping techniques for solving non-integrable Hamiltonian systems, 18:4724 (R;GB)

MAGNETIC MATERIALS
Magnetic multilayer interface anisotropy: Technical progress report, January 1, 1992–December 31, 1992, 18:3579 (R;US)

MAGNETIC MIRRORS
Multilayer monochromators and supermirrors for neutron protein crystallography using a quasi Laue technique, 18:4263 (R;US)

MAGNETIC SEMICONDUCTORS
Carrier-induced magnetic properties in small-gap semiconductors, 18:3653 (R;NL)

MAGNETOHYDRODYNAMIC CHANNELS
See MHD CHANNELS

MAGNETOMETERS

NITROUS OXIDE
Application of numerical modeling in a clean-coal demonstration project, 18:2960 (R;US)
Electrochemical abatement of pollutants NO_x and SO_x in combustion exhaust gases employing a solid-oxide electrolyte: Fourth quarterly report, July 1989–September 1989, 18:2971 (R;US)
Electrochemical abatement of pollutants NO_x and SO_x in combustion exhaust gases employing a solid-oxide electrolyte: Second quarterly report, January 1989–March 1989, 18:2970 (R;US)
Enhancing the use of coals by gas reburning-sorbent injection: Environmental monitoring quarterly report No. 8, April 1–June 30, 1992, 18:2969 (R;US)
Innovative Clean Coal Technology (ICCT): 180 MW demonstration of advanced tangentially-fired combustion techniques for the reduction of nitrogen oxide (NO_x) emissions from coal-fired boilers: Technical progress report, first quarter 1992, 18:2974 (R;US)
Mechanistic study of poisoning of DeNoxING catalysts by alcali metals, 18:2976 (R;IT)
N_2O formation in combustion systems: Quarterly technical progress report, 18:2973 (R;US)
PETC Review, Issue 6, Summer 1992, 18:2494 (R;US)
Results of a chronic inhalation with N-nitrosodimethylamine (NDMA) and SO_2/NO_x, 18:4417 (RA;DE;In German)
The Natural Gas Vehicle Challenge '92: Exhaust emissions testing and results, 18:3558 (R;US)
Undergraduate research studies program at participating institutions of the HBCU Fossil Energy Consortium: Final report, 18:2519 (R;US)

NITRONIC 40
See STAINLESS STEEL-21-6-9

NITROUS OXIDE
N_2O formation in combustion systems: Quarterly technical progress report, 18:2973 (R;US)
N_2O formation in combustion systems: Quarterly technical progress report, 18:2972 (R;US)

NMR IMAGING
Magnetic field perturbation in proton MR imaging - A study of a contrast agent and of distortions due to metallic implants, 18:4288 (R;SE)

NON-PROLIFERATION POLICY
Nuclear proliferation and IAEA safeguards: The situation. (Canberra, Australia 27-28 August 1990), 18:3495 (IA;XA)

NON-PROLIFERATION TREATY
Nuclear non-proliferation: The promotion of peaceful uses of nuclear energy. (Cairo, Egypt 3-4 March 1992), 18:3560 (IA;XA)

NONAXIAL NUCLEI
See DEFORMED NUCLEI

NONDESTRUCTIVE TESTING
Validation and transfer of advanced NDE technologies, 18:3324 (RA;US)

NONLINEAR PROBLEMS
Complex temporal and spatial patterns in nonequilibrium processes: Progress report, December 1, 1987–November 30, 1992, 18:4673 (R;US)

NONLINEAR SYSTEMS
See NONLINEAR PROBLEMS

NORTH ANNA-1 REACTOR
Auxiliary feedwater system risk-based inspection guide for the North Anna nuclear power plants, 18:3436 (R;US)

NORTH ANNA-2 REACTOR
Auxiliary feedwater system risk-based inspection guide for the North Anna nuclear power plants, 18:3436 (R;US)

NORTH ANNA-3 REACTOR
Auxiliary feedwater system risk-based inspection guide for the North Anna nuclear power plants, 18:3436 (R;US)

NORTH ANNA-4 REACTOR
Auxiliary feedwater system risk-based inspection guide for the North Anna nuclear power plants, 18:3436 (R;US)

NORTH DAKOTA
A chemical kinetic model of hydrocarbon generation from the Bakken Formation, Williston Basin, North Dakota, 18:2601 (R;US)

NRPB
Corporate plan 1992/93 to 1996/97, 18:4355 (I;GB)

NRTS
See IDAHO NATIONAL ENGINEERING LABORATORY

NRU CANADA REACTOR
See NRU REACTOR

NRU REACTOR
CRNL experience with research reactor fuel conversion and mixed core operation, 18:3272 (RA;XA)
Summary of specifications for Canadian enriched U-Al pin-type fuel, 18:3268 (RA;XA)
The conversion of NRU from HEU to LEU fuel, 18:3253 (RA;XA)

NRX REACTOR
CRNL experience with research reactor fuel conversion and mixed core operation, 18:3272 (RA;XA)
Summary of specifications for Canadian enriched U-Al pin-type fuel, 18:3268 (RA;XA)

NUCLEAR ACCIDENTS
See ACCIDENTS

NUCLEAR ATTACKS

NUCLEAR CONTROVERSY
See HUMAN POPULATIONS

NUCLEAR DATA COLLECTIONS
Annual progress report on nuclear data, 1991, 18:4604 (R;BE)
International nuclear data centers and the Nuclear Data Center of the Instituto de Estudos Avancados, 18:4829 (R;BR;In Portuguese)
Nuclear data libraries for the treatment of sequential (x,n) reactions in fusion materials activation calculations, 18:4834 (R;DE)

NUCLEAR DECAY
Co-ordination of the international network of nuclear structure and decay data evaluation: Summary report of a consultants' meeting held at the Kuwait Institute for Scientific Research, Kuwait, 10-14 March 1990, 18:4588 (R;XA)
Nuclear reaction and decay data for application in research work, 18:4623 (IA;LY)

NUCLEAR DEFORMATION
Collective properties of octupole-deformed atomic nuclei, 18:4594 (R;PL;In Polish)
New vistas in superdeformation, 18:4581 (R;US)

NUCLEAR ENERGY
Speaking of nuclear energy: Highlights of proceedings from IAEA Public Information Regional Seminars, 18:3484 (I;XA)
The nuclear controversy in relations between Brazil and United Stated of America, 18:4766 (I;BR;In Portuguese)

NUCLEAR ENGINEERING
Construction of a bibliographic information database for the nuclear engineering, 18:4833 (R;KR;In Korean)

NUCLEAR EXPLOSION DETECTION
Free-field particle velocity and yield, 18:4084 (RA;US)
P_n from the Nevada Test Site, 18:4087 (RA;US)
Regional seismic observations from NTS explosions, 18:4085 (RA;US)
The high frequency character of P-wave form earthquakes and explosions, 18:4090 (RA;US)
Three-dimensional simulations of ripple-fired quarry blasts in Massachusetts, 18:4098 (RA;US)

NUCLEAR EXPLOSIONS
Computerized Simulation
Simulation of regional seismograms, teleseismic body waves, and Rayleigh wave phase shifts using two-dimensional nonlinear models of explosion sources, 18:4097 (RA;US)

Containment
Free field stress, acceleration, velocity, and displacement data available from contained detonatiõns at the Nevada Test Site, 18:4067 (RA;US)

Data Analysis
Effects of in-situ stress and fracture spacing on ground motion and spall from underground nuclear explosions, 18:4068 (RA;US)
Seismic moment estimation of underground nuclear explosions: A review of surface wave results and implications for the source, 18:4086 (RA;US)

Ground Motion
Stochastic geologic effects on near-field ground motions, 18:4083 (RA;US)

Mathematical Models
Differing P and S wave source histories from tectonic release models: A possible complication to second order moment tensor inversions of Rayleigh waves from nuclear explosions, 18:4094 (RA;US)
Geological models in 1-D and 2-D nuclear event calculations that influence surface motion and spall, 18:4096 (RA;US)
Modeling near-field data at NTS and Amchitka, 18:4082 (RA;US)

Rayleigh Waves
Differing P and S wave source histories from tectonic release models: A possible complication to second order moment tensor inversions of Rayleigh waves from nuclear explosions, 18:4094 (RA;US)
Near-source scattering of Rayleigh to P waves in teleseismic arrivals of NTS shots, 18:4089 (RA;US)

Research Programs
Far-field workshop, 18:4069 (RA;US)
Forward-modeling workshop, 18:4091 (RA;US)
Near-field workshop, 18:4079 (RA;US)

Rock Mechanics
Effects of in-situ stress and fracture spacing on ground motion and spall from underground nuclear explosions, 18:4068 (RA;US)

Seismic Effects
Amplitude-dependent attenuation and implications for the seismic source, 18:4081 (RA;US)
Free field stress, acceleration, velocity, and displacement data available from contained detonations at the Nevada Test Site, 18:4067 (RA;US)
Free-field observations from underground nuclear explosions, 18:4099 (RA;US)
Freefield data and the seismic source function: New source parameter results, 18:4100 (RA;US)
Multi-dimensional simulation of nonlinear source processes and seismic wave excitation, 18:4092 (RA;US)
Radiation patterns from explosions in anisotropic media, 18:4095 (RA;US)
Simulation of regional seismograms, teleseismic body waves, and Rayleigh wave phase shifts using two-dimensional nonlinear models of explosion sources, 18:4097 (RA;US)
Spatial variations in free-field and free surface ground motions from explosions and the constraint of physical source mechanisms, 18:4080 (RA;US)

Seismic P Waves
The effects of spall on teleseismic P-waves: An investigation with theoretical seismograms, 18:4071 (RA;US)

Seismic Sources
Broad band estimates of the seismic source functions of explosions from far-field observations of p-waves, 18:4088 (RA;US)
Seismic moment estimation of underground nuclear explosions: A review of surface wave results and implications for the source, 18:4086 (RA;US)

Yields
Body wave observations of tectonic release, 18:4072 (RA;US)
Estimates of seismic coupling and nuclear explosion yields using seismic magnitude and moment data, 18:4074 (RA;US)
Far-field workshop, 18:4069 (RA;US)

NUCLEAR FACILITIES
See also FUEL FABRICATION PLANTS
FUEL REPROCESSING PLANTS
IRRADIATION PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
SURPLUS NUCLEAR FACILITIES
Consequences and effectiveness of relocation after nuclear accidents, 18:3312 (R;DE;In German)
Radiation monitoring in the surroundings of the nuclear facilities of Baden-Wuerttemberg. Annual report 1991, 18:4198 (I;DE;In German)
Radiation monitoring in the surroundings of the nuclear facilities of Baden-Wuerttemberg. Annual report 1990, 18:4197 (I;DE;In German)
Residual radioactive contamination from decommissioning: Technical basis for translating contamination levels to annual total effective dose equivalent: Final report: Volume 1, 18:4361 (R;US)
The development of application technology for image processing in nuclear facilities, 18:4035 (R;KR;In Korean)

NUCLEAR FIREBALLS
Pion-source geometry deduced from soft-pion interferometry in heavy-ion collisions at 650 A MeV, 18:4636 (R;PL)

NUCLEAR FRAGMENTATION
Fluctuation effects on bubble growth in hot nuclear matter, 18:4607 (R;BR)

NUCLEAR FUEL CONVERSION
Process improvement of reconversion facilities, 18:3065 (R;KR;In Korean)
Standardization of specifications and inspection procedures for LEU plate-type research reactor fuels, 18:3261 (RA;XA)

NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS

NUCLEAR FUELS
See also DISPERSION NUCLEAR FUELS
SPENT FUELS

Cermets
The possible use of cermet fuel in the DIDO and PLUTO heavy-water research reactors, 18:3186 (RA;XA)

Expert Systems
The development of expert systems for process monitoring in British nuclear fuels, 18:3059 (RA;XA)

Fission Product Release
Enriched uranium fuel quality: Preliminary report, 18:3102 (R;US)

Fuel Densification
A state-of-the-art report on the In-reactor densification and resintering test, 18:2629 (R;KR;In Korean)

Heat Transfer
The possible use of cermet fuel in the DIDO and PLUTO heavy-water research reactors, 18:3186 (RA;XA)

Kuca Reactor
Safety review of KUCA conversion from HEU to MEU fuel, 18:3182 (RA;XA)
Materials Recovery
Integrated process for reprocessing spent nuclear fuel, 18:2694 (PA;US)
Modifications
Modifications required by the OSIRIS core conversion, 18:3185 (RA;XA)
Performance Testing
An in-pile testing program to study the performance characteristics of coated particle fuels, 18:3032 (R;US)
Phase Diagrams
Experimental and numerical optimization of the U-Zr-C ternary phase diagram, 18:3030 (R;US)
Plutonium
The fuel cycle and plutonium as a reactor fuel. (Aomori, Japan 25-26 October 1990), 18:3494 (IA;XA)
Post-Irradiation Examination
Development of nuclear fuels. Development of post-irradiation examination and evaluation techniques for nuclear reactor fuel (II), 18:3061 (R;KR;In Korean)
Process Control
The development of expert systems for process monitoring in British nuclear fuels, 18:3059 (RA;XA)
Production
Fuels Preparation Department monthly report, October 1960, 18:3165 (R;US)
Public Relations
The fuel cycle and plutonium as a reactor fuel. (Aomori, Japan 25-26 October 1990), 18:3494 (IA;XA)
Safety
Safety analysis - Utilization of low enrichment uranium (LEU) fuel in the Ford Nuclear Reactor, 18:3184 (RA;XA)
Specific Heat
Selected thermal properties and uranium density relations for alloy, aluminide, oxide, and silicide fuels, 18:3232 (RA;XA)
Specifications
Research reactor core conversion guidebook. V. 4: Fuels (Appendices I-K), 18:3220 (R;XA)
Safety analysis - Utilization of low enrichment uranium (LEU) fuel in the Ford Nuclear Reactor, 18:3184 (RA;XA)
Temperature Distribution
The possible use of cermet fuel in the DIDO and PLUTO heavy-water research reactors, 18:3186 (RA;XA)
Thermal Conductivity
Selected thermal properties and uranium density relations for alloy, aluminide, oxide, and silicide fuels, 18:3232 (RA;XA)

NUCLEAR INDUSTRY
Expert systems in the nuclear industry: Report of a technical committee meeting/workshop held in Springfields, United Kingdom, 30 September - 4 October 1991, 18:4799 (R;XA)

NUCLEAR MATTER
Chemical potentials of π^- and $\pi+$ in heavy-ion collisions, 18:4632 (R;UA)

NUCLEAR MEDICINE
Applications of nuclear science and technology. (Bangkok, Thailand 14-15 November 1991), 18:3487 (IA;XA)

NUCLEAR PHYSICS
Experiments on the nuclear interactions of pions and electrons: Progress report (Dept. of Physics, Univ. of Virginia), 18:4543 (R;US)
Theoretical studies in medium-energy nuclear and hadronic physics, 18:4578 (R;US)

NUCLEAR POWER
Annual report and accounts 1991-92, 18:4767 (I;GB)
Energy, economics, environment and nuclear power. (Bombay, India 18 December 1989), 18:3486 (IA;XA)
Public attitudes and nuclear power: The question of nuclear power. (Cairo Egypt 3-4 March 1992), 18:3485 (IA;XA)

NUCLEAR POWER PLANTS
Computer Codes
Obtainment of nuclear power plant dynamic parameters by adaptive mesh technique, 18:3045 (I;BR;In Portuguese)
Containment Systems
Study of potential design margins in the codes of practice for structural design of primary containment, 18:3401 (RA;US)
Decommissioning
Residual radioactive contamination from decommissioning: Technical basis for translating contamination levels to annual total effective dose equivalent: Final report: Volume 1, 18:4361 (R;US)
Design
Nuclear design report for Kori nuclear power plant Unit 3 Cycle 7, 18:3008 (R;KR)
Expert Systems
Expert systems in the nuclear industry: Report of a technical committee meeting/workshop held in Springfields, United Kingdom, 30 September - 4 October 1991, 18:4799 (R;XA)
Investment
Investigations of investment risk analysis for new reactor design approaches, 18:3039 (R;DE;In German)
Meltdown
Core-concrete interactions using molten urania with zirconium on a limestone concrete basemat: The SURC-1 experiment, 18:3434 (R;US)
Neural Networks
Fuzzy logic – artificial neural networks integration for transient identification, 18:3068 (R;US)
Possible roles of neural networks in developing expert systems for the nuclear industry, 18:2981 (RA;XA)
Occupational Exposure
A rule-based methodology for monitoring airborne radioactivity in nuclear power plants, 18:3083 (R;US)
ALARA practices to minimize occupational radiation exposure from contamination at commercial nuclear power plants, 18:3082 (R;US)
On-Line Control Systems
Expert systems in the nuclear industry: Report of a technical committee meeting/workshop held in Springfields, United Kingdom, 30 September - 4 October 1991, 18:4799 (R;XA)
Poland
Report concerning Zarnowiec nuclear power plant, 18:3007 (I;PL;In Polish)
Reactor Accidents
Precursors to potential severe core damage accidents: 1991, A status report: Volume 16, Appendices B, C, and D, 18:3432 (R;US)
Reactor Components
NRC research program on plant aging: Listing and summaries of reports issued through July 1992: Revision 3, 18:3050 (R;US)
Reactor Protection Systems
Risk effectiveness evaluation of surveillance testing, 18:3298 (R;US)
Reactor Safety
Nuclear safety: What is it, what does it involve? (Aomori, Japan 25-26 October 1990), 18:3491 (IA;XA)
Study of potential design margins in the codes of practice for structural design of primary containment, 18:3401 (RA;US)
Reactor Shutdown
Nuclear power stations in August: Information and commentary, 18:3442 (R;GB)
Reliability
Nuclear Computerized Library for Assessing Reactor Reliability (NUCLARR): Version 3.5, Quick Reference Guide, 18:3049 (R;US)
Risk Assessment
Requirements and capabilities of PSA for safety management applications, 18:3295 (R;US)
Risk-based configuration control: Application of PRA in improving technical specifications and operational safety, 18:3297 (R;US)
Safety
A PC based program for the support of a safety analysis expert, 18:2982 (RA;XA)
Shielding
Improved response functions for gamma-ray skyshine analyses, 18:4646 (R;US)

PLATINUM
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces, 18:3791 (R;US)
Solar photocatalysis for the treatment of water containing toxic metals, 18:3816 (R;US)
The calculation of surface orbital energies for specific types of active sites on dispersed metal catalysts, 18:3575 (R;US)
The effect of rhenium, sulfur and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies, 18:3812 (R;US)

PLATINUM COMPLEXES
Late transition metal oxo and imido complexes: Progress report, May 15 1992–May 14, 1992, 18:3790 (R;US)
Photochemistry and photophysics of square planar platinum (II) dithiolate complexes, 18:3858 (RA;US)
Temperature dependence of the picosecond lifetime of $Pt_2(pop)_4^{4-}$, 18:3874 (RA;US)
The photophysical properties of platinum(II) complexes: Emission from ^{3}MLCT and ^{3}LC states, 18:3880 (RA;US)

PLATINUM IONS
Line overlap measurements for resonant photo-pumping of x-ray lasers, 18:3966 (R;US)

PLATINUM METAL ALLOYS
See also PALLADIUM ALLOYS
RHODIUM ALLOYS
The strong reactions of Lewis-base noble-metals with vanadium and other acidic transition metals, 18:3810 (R;US)

PLATINUM METALS
See also PALLADIUM
PLATINUM
RUTHENIUM
The strong reactions of Lewis-base noble-metals with vanadium and other acidic transition metals, 18:3810 (R;US)

PLATINUM OXIDES
Multi-body forces and the energetics of transition metals, alloys, and semiconductors: Annual progress report, (1991–1992), 18:3576 (R;US)

PLESIOTHERAPY
See RADIOTHERAPY

PLUTO REACTOR
ECCS used in DIDO and PLUTO, 18:3181 (RA;XA)
The possible use of cermet fuel in the DIDO and PLUTO heavy-water research reactors, 18:3186 (RA;XA)

PLUTONIC ROCKS
See also GRANITES
Isotopic and geochemical studies of Ferrar dolerite sills in the Transatlantic Mountains, 18:3747 (IA;BR)
Proterozoic and Phanerozoic tectono-magmatic and tectono-thermal development in Neuschwabenland based on radiometric, Paleomagnetic and geochemical data of the magmatic sequences from the Ahlmannruecken and Vestfjella (Antarctica), 18:3744 (IA;BR)

PLUTONIUM
Chemistry
Mound activities in chemical and physical research: January–December 1991, 18:3773 (R;US)
Coincidence Methods
Statistical data filtration in neutron coincidence counting, 18:4037 (R;US)
Concentration Ratio
A study of intrinsic densitometry using the Monte Carlo method, 18:3771 (R;US)
Containment
Modeling induction heating and electrodynamic forces, 18:3952 (R;US)
Electrorefining
Evaluation of chloride-ion-specific electrodes as in situ chemical sensors for monitoring total chloride concentration in aqueous solutions generated during the recovery of plutonium from molten salts used in plutonium electrorefining operations, 18:3770 (R;US)
Materials Recovery
Report on SCRUP analysis meeting at Chalk River, 18:2680 (R;US)

Processing
Chemical Processing Department monthly report for April 1958, 18:2683 (R;US)
Chemical Processing Department monthly report for February 1960, 18:2686 (R;US)
Chemical Processing Department monthly report for January 1960, 18:2685 (R;US)
Chemical Processing Department monthly report for October 1959, 18:2684 (R;US)
Chemical Processing Department monthly report, January 1958, 18:2682 (R;US)
Chemical Processing Department monthly report, May 1961, 18:2688 (R;US)
Chemical Processing Department monthly report, September 1960, 18:2687 (R;US)

Production
Chemical Processing Department monthly report for April 1958, 18:2683 (R;US)
Chemical Processing Department monthly report for February 1960, 18:2686 (R;US)
Chemical Processing Department monthly report for January 1960, 18:2685 (R;US)
Chemical Processing Department monthly report for October 1959, 18:2684 (R;US)
Chemical Processing Department monthly report, January 1958, 18:2682 (R;US)
Chemical Processing Department monthly report, May 1961, 18:2688 (R;US)
Chemical Processing Department monthly report, September 1960, 18:2687 (R;US)

Radioactive Waste Storage
New evaluation methods for plutonium assay by passive neutron interrogation of barrels with heavy and heterogeneous waste, 18:4036 (R;DE;In German)

Solvent Extraction
Chemical Research Section progress report for November 1950, 18:2681 (R;US)

PLUTONIUM 238
Westinghouse Hanford Company environmental surveillance annual report: Calendar year 1991, 18:4212 (R;US)

PLUTONIUM 239 TARGET
Neutrons scattering studies in the actinide region: Progress report, August 1, 1991–July 31, 1992, 18:4609 (R;US)

PLUTONIUM FLUORIDES
Chemical Research Section progress report for November 1950, 18:2681 (R;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNL
See BATTELLE PACIFIC NORTHWEST LABORATORIES

POINCARE GROUPS
From the rotation group to the Poincare group, 18:4810 (R;US)

POINT CONTACTS
See ELECTRIC CONTACTS

POINT MUTATIONS
See GENE MUTATIONS

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLAND
Accumulation and translocation of chemicals in the Polesie Lubelskie region, 18:4112 (RA;US)
An early example of pollution prevention: The case of the Polish metal finishing and coating industry, 18:4228 (RA;US)
Central Laboratory for Radiological Protection in Warsaw about contamination level in Poland in March 1990: Statement, 18:4132 (IA;PL;In Polish)
Determination of harmful substances in the Liwiec river in Poland, 18:4232 (RA;US)
Heavy elements in fruit and vegetables cultivated in Siedlce district in Poland, 18:4163 (RA;US)
Influence of nuclear power plant accident at Chernobyl on radiological situation in Poland, 18:4103 (IA;PL;In Polish)
Report concerning Zarnowiec nuclear power plant, 18:3007 (I;PL;In Polish)
Short information about results of studies subsequent to realization of MZ-17 program "Late consequences of some preventive actions undertaken in consequence of country contamination after nuclear power plant accident at Chernobyl" in 1986-89, 18:4357 (IA;PL;In Polish)
The system for measurements of radioactive contamination of environment and food in Poland, 18:4110 (R;PL)

POLARIZED NUCLEI
See ORIENTED NUCLEI

POLISHING
Precision surface machining, 18:4052 (PA;US)

POLLUTANTS
AQUIS: A PC-based air quality and permit information system, 18:4105 (R;US)
Alternative formulations of the Laplace transform boundary element (LTBE) numerical method for the solution of diffusion-type equations, 18:4203 (R;US)
An integrated performance measure for environmental restoration at Oak Ridge National Laboratory, 18:2827 (R;US)
Computer-assisted molecular modeling and prediction of the physical, chemical and biological fate of environmental pollutants, 18:4382 (RA;US)
The Mazovarian Refinery and Petrochemical Works emission influence onto chemical content of cultivated plants, 18:2615 (RA;US)
Tracing bomb-spike tritium to estimate rates of vertical recharge and pollutant transport through unsaturated glacial till, 18:4166 (RA;US)
Uptake and localization of nutritive and potentially toxic minerals in ectomycorrhizas of forest trees, 18:4201 (R;DE;In German)

POLLUTION
See also AIR POLLUTION
LAND POLLUTION
Co-ordinated research programme on the use of nuclear and nuclear-related techniques in the study of environmental pollution associated with solid wastes: Report on the second research co-ordination meeting, Jakarta, Indonesia, 20-24 November 1989, 18:3686 (R;XA)

POLLUTION SOURCES
Determination of atmospheric trace elements by INAA: An application of receptor modelling, 18:3729 (RA;XA)

POLY(ISOBUTYLENE OXIDE)
See ORGANIC POLYMERS

POLYACRYLONITRILE
See ORGANIC POLYMERS

POLYCARBONATES
Ion beam application for improved polymer surface properties, 18:3644 (R;US)

POLYCYCLIC AROMATIC HYDROCARBONS
Extraction of PAH and PCB for sanitation of contaminated soils using supercritical fluids, 18:4199 (R;DE;In German)
Henry's law constant for environmentally significant compounds, 18:4377 (RA;US)

POLYCYCLIC SULFUR HETEROCYCLES
Characterization of the interchain charge-generation mechanism of electronically conductive poly(3-methylthiophene), 18:3861 (RA;US)
Model studies of hydrodesulfurization by Mo: Annual technical progress report, December 1, 1991–November 30, 1992, 18:3777 (R;US)

POLYMER-SEMICONDUCTOR SOLAR CELLS
See PS SOLAR CELLS

POLYMERIZATION
See also COPOLYMERIZATION
DIMERIZATION
[Transition metal mediated transformations of small molecules]: Progress report, 18:3778 (R;US)

POLYMERS
See also ORGANIC POLYMERS
Ion beam application for improved polymer surface properties, 18:3644 (R;US)
Molecular aspects of transport in thin films of controlled architecture: Technical summary, July 1, 1991–June 30, 1992, 18:4050 (R;US)

Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition: Triennial performance report, August 1, 1989–July 31, 1992, 18:3668 (R;US)
Polymers at liquid-liquid interfaces: Photophysics and photoredox chemistry, 18:3885 (RA;US)
Short range order in amorphous polycondensates, 18:3643 (R;US)
Teaching polymers to fold, 18:4818 (R;US)

POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS

POLYPEPTIDES
Variable attenuation of intramolecular electron transfer rates with distance in oligoproline-bridged binuclear complexes, 18:3886 (RA;US)

POLYSACCHARIDES
See also CELLULOSE
DEXTRAN
HEMICELLULOSE
INULIN
LIGNIN
STARCH
Hemicellulose bioconversion to polyanionic heteropolysaccharides, 18:2872 (RA;US)
Production of β-1,3-glucan exopolysaccharide in low shear systems: The requirement for high oxygen systems, 18:2895 (RA;US)
Properties of the seed gum of Stryphnodendron barbatiman (barbatimao), 18:2879 (RA;US)
Recent research efforts in the area of biotechnology for fuels and chemicals: Poster session papers, 18:2862 (R;US)
The anionic glycan from the cactus Cereus peruvianus, 18:4269 (RA;US)

POLYSTYRENE
Ion beam application for improved polymer surface properties, 18:3644 (R;US)

POLYSULFIDES
See SULFIDES

POLYTETRAOXANE
See ORGANIC POLYMERS

POLYTHIONIC ACIDS
See INORGANIC ACIDS

POMERANCHUK PARTICLES
Nonlinear Pomeron and Odderon in elastic re-scatterings, 18:4556 (R;UA)
Odderon dominance in dipole model of hadron elastic scattering, 18:4555 (R;UA)
Supercritical pomeron and spin effects in meson-nucleon scattering at high energy, 18:4552 (R;UA)

POMERONS
See POMERANCHUK PARTICLES

PONDS (COOLING)
See COOLING PONDS

POPULATION DYNAMICS
Individual-based modeling of environmental quality effects on early life stages of fish: A case study using striped bass, 18:4234 (R;US)

PORK
See MEAT

POROUS MATERIALS
Thermodynamics and transport in microporous media: Progress report, 18:3787 (R;US)

PORPHYRINS
See also CHLOROPHYLL
Asymmetric photopotentials from polymeric porphyrin films, 18:2937 (RA;US)
Charge-transfer interactions in MESO-linked porphyrin-anthraquinone molecules, 18:3855 (RA;US)
Electron transfer reactions of metalloporphyrins. Effect of structure and medium on site of reaction in nickel and chromium porphyrins, 18:3877 (RA;US)
Kinetics and radical yields in photoreduction of protonated tetraphenyl porphyrin dication: Evidence for triplet 'triplex' formation, 18:3871 (RA;US)
Mechanisms of interfacial redox processes on semiconductor particles, 18:3873 (RA;US)
Photoinitiated electron transfer in synthetic tetrads and pentads, 18:3839 (RA;US)
Porphyrin chemistry, 18:3844 (RA;US)

PORTABLE EQUIPMENT
Comparison of Hanby field test kit procedures for petroleum contaminated water and soil with field and laboratory methods of analysis, 18:2616 (RA;US)

PORTS
See HARBORS

PORTSMOUTH GASEOUS DIFFUSION PLANT
An aerial radiological survey of the Portsmouth Gaseous Diffusion Plant and surrounding area, Portsmouth, Ohio: Date of survey: July 1990, 18:4185 (R;US)
Integrated waste storage plan, 18:2774 (R;US)
Results of the outdoor radiological survey at the Portsmouth Gaseous Diffusion Plant site, Piketon, Ohio, 18:2822 (R;US)

POSITIVE IONS
See CATIONS

POSITRON BEAMS
Charged-particle beam diagnostics for the Advanced Photon Source (APS), 18:3984 (R;US)

POSITRON-ELECTRON-PROTON STORAGE RING
See PEP STORAGE RINGS

POTABLE WATER
See DRINKING WATER

POTASSIUM 40
Radionuclide concentration in ground-level air in 1991 in North Germany, 18:4145 (R;DE)

POTASSIUM ALLOYS
Local order and concentration fluctuations in K-Pb and Rb-Pb alloys, 18:3589 (R;XA)
Resource Conservation and Recovery Act (RCRA): Part B permit application for Interim Reactive Waste Treatment Area (IRWTA) at the Oak Ridge Y-12 Plant: Revision 1, 18:2811 (R;US)

POTASSIUM BROMIDES
He atom surface scattering: Surface dynamics of insulators, overlayers and crystal growth: Progress report, May 1, 1992–April 30, 1993, 18:3647 (R;US)

POTASSIUM CARBONATES
A model approach to highly dispersing catalytic materials in coal for gasification: Eleventh quarterly report, April 1, 1992–June 30, 1992, 18:2517 (R;US)

POULTRY
See FOWL

POWDERS
Development of Solid Oxide Fuel Cell (SOFC): Third semi-annual progress report August 1991-January 1992, 18:3518 (R;NL)
Differential thermal analysis and metallographic examinations of U_3Si_2 powder and U_3Si_2/Al (38 w/o) miniplates, 18:3234 (RA;XA)
Fabrication and evaluation of small (≈100W) SOFC (Solid Oxide Fuel Cell) reactors: Final report: Task 3.2. Preparation of ceramic bi-polar plates, 18:3519 (R;NL)
Manufacturing techniques for components of flat plate, solid oxide fuel cell (SOFC) reactors: First semi-annual progress report July 1991-December 1991, 18:3517 (R;NL)

POWER DEMAND
Energy, economics, environment and nuclear power. (Bombay, India 18 December 1989), 18:3486 (IA;XA)
Power distribution network load predicting by interpolation and extrapolation of power consumption statistical data: Statistical model application, 18:3505 (R;IT;In Italian)

POWER DISTRIBUTION
Reactor power level limits, 18:3311 (R;US)

POWER DISTRIBUTION SYSTEMS

Auxiliary Water Systems
Detecting and mitigating aging in component cooling water systems, 18:3327 (RA;US)

Computerized Simulation
Computer code for simulating pressurized water reactor core, 18:3004 (I;BR;In Portuguese)

Containment Systems
A review of containment accidents, 18:3396 (RA;US)
A review on operating experiences of containment isolation systems in Korea, 18:3431 (RA;US)
ALWR utility requirements document containment performance requirements, 18:3400 (RA;US)
ANSI/ANS 56.8 standard committee status report, 18:3426 (RA;US)
Adiabatic equilibrium models for direct containment heating, 18:3347 (RA;US)
Aging of concrete containment structures in nuclear power plants, 18:3429 (RA;US)
An improved design concept for next generation PWR containments, 18:3412 (RA;US)
An investigation of liner tearing in reinforced concrete reactor containment buildings: Comparison of experimental and analytical results, 18:3421 (RA;US)
Analysis of containment parameters during the main steam line break with the failure of the feedwater control valves, 18:3418 (RA;US)
Comparisons between HDR-H_2-distribution experiments E11.2 and E11.4, 18:3349 (RA;US)
Concerning assessment of the strength and leaktightness of the double-shell containment of a 1,300 MWe PWR, 18:3416 (RA;US)
Containment leakage rate testing requirements, 18:3425 (RA;US)
Containment penetrations - flexible metallic bellows testing, safety, life extension issues, 18:3428 (RA;US)
Containment performance experiments under severe accident loadings, 18:3369 (RA;US)
Containment severe accident phenomenology, 18:3394 (RA;US)
Design bases and severe accident considerations for the System 80+ ™ containment design, 18:3403 (RA;US)
Design considerations for concrete containments under severe accident loads, 18:3402 (RA;US)
Design of the internal geometry of an advanced containment for mitigating deflagration overpressures, 18:3408 (RA;US)
Eccentric H_2 detonation in a nuclear power plant steel containment, 18:3417 (RA;US)
Extreme loadings of inner structures of next generation PWR containments, 18:3411 (RA;US)
Industry current and future plans for implementation of proposed revision of 10 CFR Part 50, Appendix J, Containment Leak Rate Testing, 18:3427 (RA;US)
L.I.R.A.: An advanced containment system to minimize the accidental radioactivity releases, 18:3407 (RA;US)
New containment modeling features of the CONTAIN code, 18:3344 (RA;US)
Numerical simulation of the ultimate load capacity of a reactor containment building, 18:3422 (RA;US)
Opening remarks, 18:3393 (RA;US)

Overview of NUPEC containment integrity project, 18:3413 (RA;US)
Plan on test to failure of a prestressed concrete containment vessel model, 18:3414 (RA;US)
Proposed criteria to accommodate severe accidents in containment design, 18:3395 (RA;US)
Research and development performed at CEA/DMT in the field of nuclear reactors containments, 18:3423 (RA;US)
Results of recent NUPEC hydrogen related tests, 18:3348 (RA;US)
Small-scale penetration leak test in ALPHA program, 18:3419 (RA;US)
Studies on ALWR's containment system penetration, 18:3409 (RA;US)
Updated ASME code rules for inservice inspection of steel and concrete containments, 18:3430 (RA;US)

Control Rooms
A performance indicator of the effectiveness of human-machine interfaces for nuclear power plants: Preliminary results, 18:3388 (RA;US)

Emergency Plans
Expanding the modeling capabilities of the cognitive environment simulation, 18:3378 (RA;US)

Energy Supplies
Expert systems monitoring in a nuclear power plant: A living example and prospects at EDF, 18:2995 (RA;XA)

Engineered Safety Systems
Aging related degradation in turbine drives and governors for safety related pumps, 18:3333 (RA;US)
Aging, condition monitoring, and loss-of-coolant accident (LOCA) tests of Class 1E electrical cables: Summary of results, 18:3334 (RA;US)
An approach for assessing ALWR passive safety system reliability, 18:3377 (RA;US)
NRC test results and operations experience provide insights for a new gate valve stem force correlation, 18:3329 (RA;US)
Risk-based performance indicators, 18:3340 (RA;US)

Expert Systems
Expert systems monitoring in a nuclear power plant: A living example and prospects at EDF, 18:2995 (RA;XA)
Verification and validation of expert systems, 18:3382 (RA;US)

L Codes
Design and static simulation of secondary loop of small PWR nuclear power plants, 18:4832 (I;BR;In Portuguese)

Loss Of Coolant
Intersystem LOCA risk assessment: Methodology and results, 18:3341 (RA;US)
Small break LOCA RELAP5/MOD3 uncertainty quantification: Bias and uncertainty evaluation for important phenomena, 18:3386 (RA;US)

Management
Organizational factors influencing improvements in safety, 18:3380 (RA;US)

Mechanical Structures
Progress in research on aging of structures, 18:3371 (RA;US)

Neutron Flux
Modal analysis of temperature feedback in oscillations induced by xenon, 18:3000 (I;BR;In Portuguese)

Nuclear Poisons
Optimization of control poison management by dynamic programming, 18:3003 (I;BR;In Portuguese)

Plutonium
The plutonium recycle for PWR reactors from brazilian nuclear program, 18:2998 (I;BR;In Portuguese)

Power Systems
Aging studies of 1E power and reactor protection systems, and transformers, 18:3325 (RA;US)
New method for detecting degradation in installed cables in nuclear power plants, 18:3326 (RA;US)

Pressure Vessels
Fatigue and environmentally assisted cracking in light water reactors, 18:3320 (RA;US)
Heavy-Section Steel Irradiation Program: Embrittlement issues, 18:3318 (RA;US)
Heavy-Section Steel Technology Program: Recent developments in crack initiation and arrest research, 18:3315 (RA;US)
Most likely failure location during severe accident conditions, 18:3350 (RA;US)
Progress in evaluation and improvement in nondestructive examination reliability for inservice inspection of light water reactors (LWRs) and characterizing fabrication flaws in reactor pressure vessels, 18:3323 (RA;US)
Universal treatment of plumes and stresses for pressurized thermal shock evaluations, 18:3387 (RA;US)

Pressurizers
Transient study of a PWR pressurizer, 18:2999 (I;BR;In Portuguese)

Primary Coolant Circuits
Effects of hydrogen generation on severe accident natural circulation, 18:3384 (RA;US)
Estimation of mechanical properties of cast stainless steels during thermal aging in LWR systems, 18:3321 (RA;US)
Mechanical-property degradation of cast stainless steel components from the Shippingport reactor, 18:3322 (RA;US)
Progress in evaluation and improvement in nondestructive examination reliability for inservice inspection of light water reactors (LWRs) and characterizing fabrication flaws in reactor pressure vessels, 18:3323 (RA;US)
Tests in the ATLE loop on the PIUS design, 18:3372 (RA;US)

Pumps
Operating experience feedback report: Experience with pump seals installed in reactor coolant pumps manufactured by Byron Jackson: Commercial power reactors, Volume 7, 18:3011 (R;US)

Reactor Accidents
A framework for the assessment of severe accident management strategies, 18:3364 (RA;US)
A structured approach to individual plant evaluation and accident management, 18:3363 (RA;US)
Development of the radiological consequences analysis model for the postulated accidents, 18:3098 (R;KR;In Korean)
Nonlinear punctual dynamic applied to simulation of PWR type reactors, 18:3002 (I;BR;In Portuguese)
Precursors to potential severe core damage accidents: 1991, A status report: Volume 16, Appendices B, C, and D, 18:3432 (R;US)
US nuclear industry approach to severe accident management guidance development and implementation, 18:3362 (RA;US)

Reactor Components
Applications and extensions of degradation modeling, 18:3330 (RA;US)
Validation and transfer of advanced NDE technologies, 18:3324 (RA;US)

Reactor Cooling Systems
Fatigue and environmentally assisted cracking in light water reactors, 18:3320 (RA;US)
Pipe fracture behavior under high-rate (seismic) loading - The IPIRG program, 18:3316 (RA;US)
Short cracks in piping and piping welds, 18:3317 (RA;US)
Snubber aging assessment: Results of NPAR Phase 2 in-plant research, 18:3336 (RA;US)
The effects of aging on friction of MOVs, 18:3328 (RA;US)

Reactor Core Disruption
ACE project Phases C and D: ACE/MCCI and MACE tests, 18:3356 (RA;US)
Adiabatic equilibrium models for direct containment heating, 18:3347 (RA;US)
Boiling jet modeling on IFCI - Preliminary report, 18:3346 (RA;US)
CORA experiments on the materials behavior of LWR fuel rod bundles at high temperatures, 18:3345 (RA;US)
Comparisons between HDR-H_2-distribution experiments E11.2 and E11.4, 18:3349 (RA;US)
Core-concrete interactions with overlying water pools, 18:3357 (RA;US)
Effects of hydrogen generation on severe accident natural circulation, 18:3384 (RA;US)
Iodine chemical forms in LWR severe accidents, 18:3359 (RA;US)
MELCOR peer review, 18:3342 (RA;US)

Main safety issues related to IPSN severe accident research, 18:3353 (RA;US)
Managing water addition to a degraded core, 18:3361 (RA;US)
Most likely failure location during severe accident conditions, 18:3350 (RA;US)
New containment modeling features of the CONTAIN code, 18:3344 (RA;US)
On the prediction of steam explosions energetics, 18:3351 (RA;US)
Parameter effects on molten debris spreading and coolability, 18:3354 (RA;US)
Planned MELCOR improvements and assessment, 18:3343 (RA;US)
Results of recent NUPEC hydrogen related tests, 18:3348 (RA;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 18:3358 (RA;US)

Reactor Cores
Computer code for simulating pressurized water reactor core, 18:3004 (I;BR;In Portuguese)

Reactor Fueling
Optimization of control poison management by dynamic programming, 18:3003 (I;BR;In Portuguese)

Reactor Instrumentation
Effects of aging on calibration and response time of nuclear plant pressure transmitters, 18:3335 (RA;US)

Reactor Kinetics
Nonlinear punctual dynamic applied to simulation of PWR type reactors, 18:3002 (I;BR;In Portuguese)

Reactor Operators
A performance indicator of the effectiveness of human-machine interfaces for nuclear power plants: Preliminary results, 18:3388 (RA;US)

Reactor Protection Systems
Aging studies of 1E power and reactor protection systems, and transformers, 18:3325 (RA;US)
Tests in the ATLE loop on the PIUS design, 18:3372 (RA;US)

Reactor Safety
A performance indicator of the effectiveness of human-machine interfaces for nuclear power plants: Preliminary results, 18:3388 (RA;US)
A review of containment accidents, 18:3396 (RA;US)
A review on operating experiences of containment isolation systems in Korea, 18:3431 (RA;US)
ALWR utility requirements document containment performance requirements, 18:3400 (RA;US)
ANSI/ANS 56.8 standard committee status report, 18:3426 (RA;US)
Accomplishments and prospects, 18:3319 (RA;US)
Aging of concrete containment structures in nuclear power plants, 18:3429 (RA;US)
Aging studies of 1E power and reactor protection systems, and transformers, 18:3325 (RA;US)
An improved design concept for next generation PWR containments, 18:3412 (RA;US)
An investigation of liner tearing in reinforced concrete reactor containment buildings: Comparison of experimental and analytical results, 18:3421 (RA;US)
Analyses of corium spreading in Mark I containment geometry, 18:3355 (RA;US)
Analysis of containment parameters during the main steam line break with the failure of the feedwater control valves, 18:3418 (RA;US)
Applications and extensions of degradation modeling, 18:3330 (RA;US)
Concerning assessment of the strength and leaktightness of the double-shell containment of a 1,300 MWe PWR, 18:3416 (RA;US)
Containment leakage rate testing requirements, 18:3425 (RA;US)
Containment penetrations - flexible metallic bellows testing, safety, life extension issues, 18:3428 (RA;US)
Containment performance experiments under severe accident loadings, 18:3369 (RA;US)
Containment severe accident phenomenology, 18:3394 (RA;US)
Design bases and severe accident considerations for the System 80+ ™ containment design, 18:3403 (RA;US)
Design considerations for concrete containments under severe accident loads, 18:3402 (RA;US)
Design of the internal geometry of an advanced containment for mitigating deflagration overpressures, 18:3408 (RA;US)
Detecting and mitigating aging in component cooling water systems, 18:3327 (RA;US)
Eccentric H_2 detonation in a nuclear power plant steel containment, 18:3417 (RA;US)
Effects of aging on calibration and response time of nuclear plant pressure transmitters, 18:3335 (RA;US)
Estimation of mechanical properties of cast stainless steels during thermal aging in LWR systems, 18:3321 (RA;US)

Tests in the ATLE loop on the PIUS design, 18:3372 (RA;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 18:3358 (RA;US)

Reactor Shutdown
A model for calculation of RCS pressure during reflux boiling under reduced inventory conditions and its assessment against PKL data, 18:3383 (RA;US)

Reprocessing
The plutonium recycle for PWR reactors from brazilian nuclear program, 18:2998 (I;BR;In Portuguese)

Rhr Systems
A model for calculation of RCS pressure during reflux boiling under reduced inventory conditions and its assessment against PKL data, 18:3383 (RA;US)

Risk Assessment
A structured approach to individual plant evaluation and accident management, 18:3363 (RA;US)
Enhancing the seismic margin review methodology to obtain risk insights, 18:3367 (RA;US)
Intersystem LOCA risk assessment: Methodology and results, 18:3341 (RA;US)
Risk-based performance indicators, 18:3340 (RA;US)

Seismic Effects
A basis for standardized seismic design (SSD) for nuclear power plants, 18:3392 (RA;US)
Enhancing the seismic margin review methodology to obtain risk insights, 18:3367 (RA;US)
High level seismic/vibrational tests at the HDR - An overview, 18:3370 (RA;US)
High-precision accelerator-mass-spectrometer radiocarbon dating of buried tidal-marsh soils - An approach to estimating the frequency and coastal extent of subduction zone earthquakes in Oregon and Washington, 18:3390 (RA;US)
Large-Scale Seismic Test Program at Hualien, Taiwan, 18:3368 (RA;US)
Liquefaction induced by modern earthquakes as a key to paleoseismicity: A case study of the 1988 Saguenay event, 18:3389 (RA;US)
Soil/structure interactions of eastern US type earthquakes, 18:3391 (RA;US)
Studies performed in support of the proposed revision of engineering design aspects of 10CFR100, Appendix A, 18:3366 (RA;US)

Shielding
Specifications for the development of BUGLE-93: An ENDF/B-VI multigroup cross section library for LWR shielding and pressure vessel dosimetry, 18:3441 (R;US)

Site Selection
Studies performed in support of the proposed revision of engineering design aspects of 10CFR100, Appendix A, 18:3366 (RA;US)

Space Dependence
Modal analysis of spatial effects on transients in nuclear power reactor, 18:3001 (I;BR;In Portuguese)

Specifications
Standard Technical Specifications, Babcock and Wilcox plants: Volume 1, Specifications, 18:3012 (R;US)
Standard Technical Specifications, Combustion Engineering plants: Volume 2, Bases (Sections 2.0-3.3), 18:3014 (R;US)
Standard Technical Specifications, Combustion Engineering plants: Volume 3, Bases (Sections 3.4–3.9), 18:3015 (R;US)
Standard Technical Specifications, Westinghouse plants: Volume 1, Specifications, 18:3013 (R;US)

Standardization
A basis for standardized seismic design (SSD) for nuclear power plants, 18:3392 (RA;US)
An approach for assessing ALWR passive safety system reliability, 18:3377 (RA;US)
Design bases and severe accident considerations for the System 80+ ™ containment design, 18:3403 (RA;US)
Initial performance assessment of the Westinghouse AP600 containment design and related safety issues, 18:3376 (RA;US)
Scaling issues for a thermal-hydraulic integral test facility, 18:3385 (RA;US)

Surveillance
Including test errors in evaluating surveillance test intervals, 18:3381 (RA;US)

Temperature Coefficient
Modal analysis of temperature feedback in oscillations induced by xenon, 18:3000 (I;BR;In Portuguese)

Transients
Modal analysis of spatial effects on transients in nuclear power reactor, 18:3001 (I;BR;In Portuguese)

RADIOACTIVE WASTE DISPOSAL
Development of the safety assessment technology for the radioactive waste disposal: Analyses of container corrosion and radionuclide release, 18:2748 (R;KR;In Korean)
Expert System analysis of non-fuel assembly hardware and spent fuel disassembly hardware: Its generation and recommended disposal, 18:2734 (R;US)

Computer Codes
Development of the safety assessment technology for the radwaste disposal: Development of the safety assessment computer code for the radwaste disposal, 18:2757 (R;KR;In Korean)

Containers
The design analysis of ACP-canister for nuclear waste disposal, 18:2807 (R;FI)

Geochemistry
The location of uranium in source rocks and sites of secondary deposition at the Needle's Eye natural analogue site, Dumfries and Galloway, 18:4184 (R;GB)

Geologic Surveys
Bedrock model of the Romuvaara area: Summary report, 18:4220 (R;FI)
The Geology of the Kivetty area: Summary report, 18:4221 (R;FI)

Geology
Evaluation of structural behavior, geological and hydrogeological characteristics: A study on the structural behavior of underground openings considering the effect of excavation, 18:2750 (R;KR;In Korean)

Ground Water
A ground water flow analysis for a nuclear waste repository excavated in bedrock, 18:2784 (RA;FI;In Finnish)
Development of three-dimensional groundwater flow and transport model, 18:2783 (RA;FI;In Finnish)
Geochemical modelling in nuclear waste studies, 18:2780 (RA;FI;In Finnish)
Geochemical modelling of groundwater evolution using chemical equilibrium codes, 18:2781 (RA;FI;In Finnish)
Modelling of ground water movement and transport of radioactive substances in performance assessments of nuclear waste disposal, 18:2778 (RA;FI;In Finnish)

Hydrology
Evaluation of structural behavior, geological and hydrogeological characteristics: A study on the structural behavior of underground openings considering the effect of excavation, 18:2750 (R;KR;In Korean)

Materials Handling Equipment
Equipment for deployment of canisters with spent nuclear fuel and bentonite buffer in horizontal holes, 18:3934 (R;FI)

Radiation Monitoring
Monitoring of radioactivity in the UK environment: an annotated bibliography of current programmes, 18:3474 (R;GB)

Radionuclide Migration
Laboratory studies of flow and transport in single fractures: Pt. 1: Artificial fracture and granite block experiments, 18:4205 (R;GB)
The location of uranium in source rocks and sites of secondary deposition at the Needle's Eye natural analogue site, Dumfries and Galloway, 18:4184 (R;GB)
The use of tracer techniques in the study of soil water flows and contaminant transport, 18:4204 (R;GB)
Uranium solubility and solubility controls in selected Needle's Eye groundwaters, 18:2732 (R;GB)

Risk Assessment
Preliminary report on the ecological assessment of Waste Area Grouping 5 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 18:2766 (R;US)
Stainless steel waste containers: an assessment of the probability of stress corrosion cracking, 18:3602 (R;GB)

Rock Mechanics
Creep in crystalline rock with application to high level nuclear waste repository, 18:4222 (R;FI)

Safety
Development of the safety assessment technology for the radwaste disposal, 18:2753 (R;KR;In Korean)
Development of the safety assessment technology for the radwaste disposal: Development of the safety assessment computer code for the radwaste disposal, 18:2757 (R;KR;In Korean)

Site Characterization
Evaluation of structural behavior, geological and hydrogeological characteristics: Shear behavior of rock joints, 18:2819 (R;KR;In Korean)

Site Surveys
Mineralogy and petrography of Caithness Flagstones used in sorption experiments by Harwell Laboratories, 18:2762 (R;GB)
Mineralogy and petrography of samples of Permo-Triassic sedimentary strata from Cumbria, 18:2821 (R;GB)

SCHROEDINGER EQUATION
The fast algorithm solving the one-dimensional time-dependent Schroedinger equation for teaching purposes, 18:4448 (R;PL;In Polish)
SCIENTIFIC PERSONNEL
Technology in education: A guidebook for developing a science and math education support program, 18:4763 (R;US)
Tools for a career in science, 18:4758 (R;US)
SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS
SCINTILLATION COUNTERS
See also LIQUID SCINTILLATION DETECTORS
Development of a scintillating fiber tracker for the SSC: Final technical report, July 1, 1991–June 30, 1992, 18:4027 (R;US)
[Elementary particles]: Final technical report, 18:4022 (R;US)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCRAM RODS
Effect of stainless steel thimbles on pile reactivity, 18:3071 (R;US)
Project C-431-B – Ball 3-X safety system – 105-C, 18:3073 (R;US)
SCRUBBERS
Effluent testing for the Oak Ridge Toxic Substances Control Act mixed waste incinerator, December 11, 1991, 18:2760 (R;US)
SEAFOOD
Determination of toxic and essential elements in seafood, 18:3682 (RA;XA)
Mercury levels in defined Italian population groups, 18:3712 (RA;XA)
SEALS
See also GASKETS
Flameless tube sealing apparatus, 18:3920 (PA;US)
Operating experience feedback report: Experience with pump seals installed in reactor coolant pumps manufactured by Byron Jackson: Commercial power reactors, Volume 7, 18:3011 (R;US)
SEASONAL THERMAL ENERGY STORAGE
Well, hydrology, and geochemistry problems encountered in ATES systems and their solutions, 18:3452 (R;US)
SEAWATER
Pre-concentration of Cr, Mn, Fe and Co of water sea and analysis by plasma emission spectroscopy - DCP, 18:4242 (I;BR;In Portuguese)
SECONDARY RECOVERY
See ENHANCED RECOVERY
SECRETION
Studies of pathophysiologic and pathomorphologic effects of inhalative exposure to low concentrations of the air pollutants NO_2 and SO_2 on the epithelium of trachea, submucosal tracheal glands and peripheral airways in the rat, 18:4415 (RA;DE;In German)
SECURITY
An approach to documenting vulnerability assessments, 18:2851 (R;US)
SEDIMENTARY ROCKS
See also SANDSTONES
SHALES
Tectonic significance of paleozoic metamorphic and sedimentary rocks of coastal central Chile, 18:3743 (IA;BR)
SEDIMENTS
Chemical Composition
Ecological evaluation of proposed discharge of dredged material from Oakland Harbor into ocean waters (Phase 3 A of -42-foot project): Volume 1, Analyses and discussion, 18:4425 (R;US)
Ecological evaluation of proposed discharge of dredged material from Oakland Harbor into ocean waters (Phase 3 A of -42-foot project): Volume 2, Appendixes, 18:4426 (R;US)
Sampling and analysis of sediments in dredged material from Wilma Uplands Disposal Site, 18:4207 (R;US)
Comparative Evaluations
Comparison of new Rb-Sr and K-Ar data from upper precambrian sedimentary sequences in Congo Republic with corresponding formations of Western Africa, Central Africa and Northeastern South America, 18:3739 (IA;BR)
Contamination
An integrated performance measure for environmental restoration at Oak Ridge National Laboratory, 18:2827 (R;US)
Isotope Dating
Comparison of new Rb-Sr and K-Ar data from upper precambrian sedimentary sequences in Congo Republic with corresponding formations of Western Africa, Central Africa and Northeastern South America, 18:3739 (IA;BR)
Proceedings of the 7. Gondwana Symposium - Abstracts, 18:3737 (I;BR)
Multi-Element Analysis
Assessment of heavy metal pollution in Ghana by nuclear-related techniques, 18:3724 (RA;XA)
Neutron Activation Analysis
Intake of mercury through fish consumption, 18:3713 (RA;XA)
Radiation Monitoring
Hazelwood Interim Storage Site annual environmental report for calendar year 1991, Hazelwood, Missouri, 18:2832 (R;US)
Maywood Interim Storage Site annual environmental report for calendar year 1991, Maywood, New Jersey: Formerly Utilized Sites Remedial Action Program (FUSRAP) (Maywood Interim Storage Site), 18:2835 (R;US)
New Brunswick Site annual environmental report for calendar year 1991, New Brunswick, New Jersey: Formerly Utilized Sites Remedial Action Program (FUSRAP) (New Brunswick Site), 18:2837 (R;US)
Niagara Falls Storage Site annual environmental report for calendar year 1991, Lewiston, New York, 18:2834 (R;US)
Wayne Interim Storage Site annual environmental report for calendar year 1991, Wayne, New Jersey: Formerly Utilized Sites Remedial Action Program (FUSRAP) (Wayne Interim Storage Site), 18:2836 (R;US)
Radionuclide Migration
Savannah River Site Environmental Report for 1990: Summary pamphlet, 18:4214 (R;US)
Radium 226
Distribution of radium in water and sediments of Rolston Creek and Reservoir. Application of direct deemenation method of analysis, 18:4245 (IA;LY)
Sampling
Clinch River Environmental Restoration Program: Phase 1, Data listing, 18:4251 (R;US)
Field Sampling and Analysis Plan for the Remedial Investigation of Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Responses to comments, 18:2830 (R;US)
Toxicity
Ecological evaluation of proposed discharge of dredged material from Oakland Harbor into ocean waters (Phase 3 A of -42-foot project): Volume 2, Appendixes, 18:4426 (R;US)
Ecological evaluation of proposed discharge of dredged material from Oakland Harbor into ocean waters (Phase 3 A of -42-foot project): Volume 1, Analyses and discussion, 18:4425 (R;US)
SEISMIC DETECTORS
Free-field particle velocity and yield, 18:4084 (RA;US)
SEISMIC SOURCES
Broad band estimates of the seismic source functions of explosions from far-field observations of p-waves, 18:4088 (RA;US)
Freefield data and the seismic source function: New source parameter results, 18:4100 (RA;US)
Spatial variations in free-field and free surface ground motions from explosions and the constraint of physical source mechanisms, 18:4080 (RA;US)
SEISMIC SURVEYS
Dip-movement processing for depth-variable velocity, 18:4435 (R;US)
SEISMIC WAVES
Amplitude-dependent attenuation and implications for the seismic source, 18:4081 (RA;US)

Dip-movement processing for depth-variable velocity, 18:4435 (R;US)
Free-field observations from underground nuclear explosions, 18:4099 (RA;US)
The transition to elastic behavior in the vicinity of an underground explosion, 18:4093 (RA;US)

SELENIUM
Co-ordinated research programme on nuclear techniques for toxic elements in foodstuffs: Report on the third research co-ordination meeting, Jakarta, Indonesia, 20-24 November 1989, 18:3673 (R;XA)
Intake of mercury through fish consumption, 18:3713 (RA;XA)
Recycling of cadmium and selenium from photovoltaic modules and manufacturing wastes: A workshop report, 18:2938 (R;US)

SEMICONDUCTOR DEVICES
See also THERMISTORS
TRANSISTORS
Strained-layer semiconductor devices including subsurface-patterned active layers, 18:3958 (PA;US)

SEMICONDUCTOR JUNCTIONS
See also HETEROJUNCTIONS
Characterization of the poly(3-methylthiophene):cadmium telluride junction, 18:3887 (RA;US)

SEMICONDUCTOR MATERIALS
See also MAGNETIC SEMICONDUCTORS
Chaotic dynamics of high density photon an exciton system, 18:4656 (R;XA)
Controlled metal-semiconductor sintering/alloying by one-directional reverse illumination, 18:3964 (PA;US)
Excitonic bistabilities, instabilities and chaos in laser-pumped semiconductor, 18:4682 (R;XA)
Measurement of electron transfer rate constants at 2-dimensional semiconductor/solution interfaces, 18:3868 (RA;US)
Mechanisms of interfacial redox processes on semiconductor particles, 18:3873 (RA;US)
Photochemical solar energy conversion utilizing semiconductors located in membrane mimetic systems, 18:2925 (RA;US)
Photochemically induced charge separation and hydrogen evolution in microporous solids, 18:3828 (RA;US)
Simulation of optical spectra and energy levels of semiconductor clusters, 18:2928 (RA;US)
Size quantization effects in semiconductor and metal colloids, 18:3826 (RA;US)
Ultrafast surface reaction dynamics at semiconductor interfaces, 18:3876 (RA;US)
X-ray studies of microstructures in semiconductors and superconducting materials, 18:3622 (R;US)

SENEGAL
Energy needs of lactating mothers and breast-feeding children in Senegal, 18:4314 (RA;XA)

SENSITIZERS
Photosensitization of large bandgap semiconductor colloids. Short bandgap semiconductor colloids and squaraine dyes as sensitizers, 18:3827 (RA;US)

SEPARATION EQUIPMENT
Development of phosphate-based ceramic membranes: Final report, 18:3670 (R;US)

SEPARATION PROCESSES
See also FLOTATION
ISOTOPE SEPARATION
Mound activities in chemical and physical research: January–December 1991, 18:3773 (R;US)
Networking electrochemical membrane separation devices: Theory and application, 18:3516 (R;US)
Polymer-based separations: Synthesis and application of polymers for ionic and molecular recognition: Triennial performance report, August 1, 1989–July 31, 1992, 18:3668 (R;US)

SERVICE WATER SYSTEMS
See AUXILIARY WATER SYSTEMS

SEWAGE SLUDGE
Efficacy of hydrolytic enzyme augmentation and thermochemical pretreatments for increased secondary anaerobic digestion of treated municipal sewage sludges, 18:2901 (RA;US)

SHALES

OIL SHALES
Mineralogy and petrography of samples of Permo-Triassic sedimentary strata from Cumbria, 18:2821 (R;GB)

SHEATHING
See CANNING

SHIELDING
A fundamental study of "contribution" transport theory and channel theory applications: Progress report, 18:4638 (R;US)
Early test facilities and analytic methods for radiation shielding: Proceedings, 18:4645 (R;US)

SHIELDING MATERIALS
Thermal testing of solid neutron shielding materials, 18:3913 (R;US)

SHIPMENT
See TRANSPORT

SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR

SHIPPINGPORT REACTOR
Mechanical-property degradation of cast stainless steel components from the Shippingport reactor, 18:3322 (RA;US)

SHOCK ABSORBERS
Snubber aging assessment: Results of NPAR Phase 2 in-plant research, 18:3336 (RA;US)

SHOCK WAVES
See also DETONATION WAVES
Constitutive and equation of state models using object-oriented programming methods, 18:4450 (R;US)

SHOWER COUNTERS
Electronics for the RHIC PHENIX detector, 18:4018 (R;US)
Experimental studies of elementary particle interactions at high energies: Technical progress report, 18:4546 (R;US)
Progress in the optoelectronic analog signal transfer for high energy particle detectors, 18:4016 (R;US)
Report of the DOE Office of Energy Research review committee on the Solenoidal Detector Collaboration of the Superconducting Super Collider, 18:4021 (R;US)
Research in particle physics: Progress report, June 1, 1992–January 31, 1993, 18:4473 (R;US)
[Medium energy meson research], 18:4024 (R;US)

SHOWERS
Field study of energy-efficient showerheads, 18:3531 (R;US)

SHUTDOWN (REACTOR)
See REACTOR SHUTDOWN

SI SEMICONDUCTOR DETECTORS
Neutron damage of silicon detectors at 20 deg C, 18:4047 (R;AU)
Radiation hardness of silicon detectors for future colliders, 18:4044 (R;DE)
The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV $\bar{p}p$ collisions; and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions: Progress report, January 1, 1992–December 31, 1992 (Detect ionization of charged particles directly in Si), 18:4544 (R;US)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SILICA
See SILICON OXIDES

SILICEOUS ROCK
See SANDSTONES

SILICIC ACID
The vibrational spectra of gaseous and liquid tetraethoxysilane, 18:3654 (R;NL)

SILICON
A solid state approach to the production of kilogram quantities of Si- 20 at.% Ge thermoelectric alloys, 18:3655 (R;US)
Brittle to ductile transition in cleavage fracture: Final techical report, April 1, 1987–June 30, 1991, 18:3648 (R;US)
Determination of the strain field from an HREM image of a Si Lomer dislocation, 18:3772 (R;US)

Electron cyclotron resonance deposition of amorphous silicon alloy films and devices: Final subcontract report, 1 April 1991–31 March 1992, 18:2919 (R;US)
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers, 18:3642 (R;US)

SILICON 28 TARGET
Nuclear structure studies at intermediate energy: Progress report, August 1991–August 1992 (School of Physics and Astronomy, Univ. of Minnesota), 18:4611 (R;US)

SILICON CARBIDES
On the influence of internal interfaces and properties of multiphase hard material coatings, 18:3633 (R;DE;In German)
Radiation effects and micromechanics of SiC/SiC composites: Annual technical report, November 15, 1991–November 14, 1992, 18:3624 (R;US)

SILICON NITRIDES
Evaluation and silicon nitride internal combustion engine components: Final report, Phase I, 18:3553 (R;US)
Microstructure/mechanical-property relationships and R-curve behavior in Si_3N_4/Si_3N_4(w) composites, 18:3611 (R;US)
Study of surface properties and adhesion mechanisms between layers of different composition with surface analytical methods, 18:3657 (R;DE;In German)

SILICON OXIDES
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon, 18:3811 (R;US)
Neutrons scattering studies in the actinide region: Progress report, August 1, 1991–July 31, 1992, 18:4609 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Electron cyclotron resonance deposition of amorphous silicon alloy films and devices: Final subcontract report, 1 April 1991–31 March 1992, 18:2919 (R;US)
Photovoltaic manufacturing technology, Phase 1: Final technical report, 1 May 1991–10 May 1991, 18:2916 (R;US)
Photovoltaics in Switzerland, 18:2939 (R;CH;In German)
Research on stable, high-efficiency amorphous silicon multijunction modules: Semiannual subcontract report, 1 January 1992–30 June 1992, 18:2918 (R;US)

SILOETTE REACTOR
Training and teaching with Siloette reactor and associated simulators at the Grenoble Nuclear Research Centre, 18:4769 (IA;LY)

SILOXANES
The vibrational spectra of gaseous and liquid tetraethoxysilane, 18:3654 (R;NL)

SILVER
Characterization of self-assembled carboxylate monolayers and multilayers at copper and silver, 18:3808 (R;US)
Photoemission from Ag, Cu, and CsI, 18:3993 (R;US)
Solar photocatalysis for the treatment of water containing toxic metals, 18:3816 (R;US)

SILVER IONS
Line overlap measurements for resonant photo-pumping of x-ray lasers, 18:3966 (R;US)

SIMS
See MASS SPECTROSCOPY

SIMULATORS (REACTOR)
See REACTOR SIMULATORS

SITE CHARACTERIZATION
A field guide for characterization of hazardous waste sites, 18:4160 (RA;US)

SITE REHABILITATION
See REMEDIAL ACTION

SKYRME POTENTIAL
About chiral models of dense matter and its magnetic properties, 18:4520 (R;PL;In Polish)
On the physical content of the S U(2) Skyrme model, 18:4563 (R;BR)

SKYRMIONS
See SKYRME POTENTIAL

SL GROUPS
Quasi quantum group covariant q-oscillators, 18:4482 (R;DE)

SLABS
1-D slab solidification TOPAZ2D comparison to analytical solution, 18:4824 (R;US)
A shape factor method for computing heating loads from building slab-on-grade foundations, 18:3523 (R;US)

SLAGS
Optical properties of flyash: Quarterly report, 1 April–30 June 1990, 18:2555 (R;US)
Optical properties of flyash: Quarterly report, 1 October–31 December 1989, 18:2556 (R;US)

SLC DETECTORS
See STANFORD LINEAR COLLIDER DETECTOR

SLUDGES
See also SEWAGE SLUDGE
Microbial stabilization of active-sulfide sludges, 18:4379 (RA;US)
Relative yields of U-235 fission products measured in a high level radioactive sludge at Savannah River Site, 18:2797 (R;US)
Retrieval technology development for Hanford double-shell tanks, 18:2771 (R;US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES (FUEL)
See FUEL SLURRIES

SMELTERS
Application of nuclear analysis techniques in the study of environmental pollution in the vicinity of Shanghai, 18:3721 (RA;XA)

SMOOTHNESS
See ROUGHNESS

SODIUM
Development of computer program for sodium fires calculations, 18:3022 (IA;BR;In Portuguese)
Study of diffusion type cold traps in liquid sodium circuit, 18:3943 (I;BR;In Portuguese)

SODIUM 22
Radionuclide concentration in ground-level air in 1991 in North Germany, 18:4145 (R;DE)

SODIUM ALLOYS
Resource Conservation and Recovery Act (RCRA): Part B permit application for Interim Reactive Waste Treatment Area (IRWTA) at the Oak Ridge Y-12 Plant: Revision 1, 18:2811 (R;US)

SOFC
See SOLID ELECTROLYTE FUEL CELLS

SOFT X RADIATION
Fast neutron dosimetry: Progress report, 1 July 1991–1 September 1992, 18:4323 (R;US)

SOIL-STRUCTURE INTERACTIONS
Large-Scale Seismic Test Program at Hualien, Taiwan, 18:3368 (RA;US)
Models for studying offshore platforms foundations behavior, 18:3953 (R;FR;In French)

SOILING
See SURFACE CONTAMINATION

SOILS
Acidification
The dependence of the success of natural regeneration on upper soil conditions and degree of acidity in declined forest stands of the Black Forest, 18:4404 (RA;DE;In German)

Contamination
An integrated performance measure for environmental restoration at Oak Ridge National Laboratory, 18:2827 (R;US)
Annual report of the Environmental Restoration Monitoring and Assessment Program at Oak Ridge National Laboratory for FY 1992: Environmental Restoration Program, 18:4206 (R;US)
Project plan for the Background Soil Characterization Project on the Oak Ridge Reservation, Oak Ridge, Tennessee, 18:4186 (R;US)
Residual radioactive contamination from decommissioning: Technical basis for translating contamination levels to annual total effective dose equivalent: Final report: Volume 1, 18:4361 (R;US)

Decontamination
Environmental influences on diethyl phthalate biodegradation kinetics, 18:4152 (RA;US)
Forms of lead and cadmium soil in the vicinity of lead reprocessing smelter, 18:4159 (RA;US)
Removal of hazardous materials: Decontamination of soils and ground water at a hazardous waste disposal site, 18:4162 (RA;US)
Sequential extraction evaluation of soil washing for radioactive contamination, 18:4213 (R;US)
The design of soil restoration treatability studies, 18:4169 (RA;US)

Gamma Radiation
Simultaneous bulk density and soil moisture determination by attenuation of ^{137} Cs and ^{241} Am, 18:4195 (I;BR;In Portuguese)

Gamma Spectroscopy
Predicted performance of systems for Bulk Soil Assay, Barrel Inspection, and Decommissioning: Final report, 18:4176 (R;US)

Hydraulic Conductivity
Simulation of contaminant transport in the unsaturated zone, 18:4156 (RA;US)

Isotope Dating
High-precision accelerator-mass-spectrometer radiocarbon dating of buried tidal-marsh soils - An approach to estimating the frequency and coastal extent of subduction zone earthquakes in Oregon and Washington, 18:3390 (RA;US)

Leaching
Application of leaching algorithms and worst-case analysis to assessment of risk to ground water from contaminated soils, 18:4153 (RA;US)

Mass Spectroscopy
High-precision accelerator-mass-spectrometer radiocarbon dating of buried tidal-marsh soils - An approach to estimating the frequency and coastal extent of subduction zone earthquakes in Oregon and Washington, 18:3390 (RA;US)

Moisture
Final geotechnical study, DARA Solid Storage Facility, Y-12 Bear Creek Burial Grounds, Oak Ridge, Tennessee: Environmental Restoration Program, 18:2806 (R;US)

Permeability
Modelling of soil porosity distributions and permeability: a new method, 18:4254 (RA;FI;In Finnish)

Plant Growth
The dependence of the success of natural regeneration on upper soil conditions and degree of acidity in declined forest stands of the Black Forest, 18:4404 (RA;DE;In German)

Porosity
Modelling of soil porosity distributions and permeability: a new method, 18:4254 (RA;FI;In Finnish)

Radar
Delineate subsurface structures with ground penetrating radar, 18:4215 (R;US)

Radionuclide Migration
CASCADER: An m-chain gas-phase radionuclide transport and fate model: Volume 1, Basic physics and mathematics, 18:4183 (R;US)
Tritium uptake by fish in a small stream: Revision 1, 18:4261 (R;US)

Remedial Action
Chromate reduction and heavy metal fixation in soil: Final report, 18:4177 (R;US)
Development of an ultrasonic process for detoxifying groundwater and soil: Laboratory research: Annual report for fiscal year 1991, 18:4151 (R;US)
Unique issues concerning "placement" vs "movement" of contaminated soils at ORNL's CERCLA sites, 18:2828 (R;US)

Sampling
Comparison of Hanby field test kit procedures for petroleum contaminated water and soil with field and laboratory methods of analysis, 18:2616 (RA;US)
Field Sampling and Analysis Plan for the Remedial Investigation of Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Responses to comments, 18:2830 (R;US)

Solidification
Technology screening for stabilization/solidification of contaminated soils, 18:4155 (RA;US)

Stabilization
Technology screening for stabilization/solidification of contaminated soils, 18:4155 (RA;US)

Storage
Final geotechnical study, DARA Solid Storage Facility, Y-12 Bear Creek Burial Grounds, Oak Ridge, Tennessee: Environmental Restoration Program, 18:2806 (R;US)

SOLAR CELLS

An investigation of the dependence of atmospheric radiative transfer on aerosol size distribution, 18:4146 (R;US)

Using a second-order turbulence radiative-convective model to study the cloud/radiation interaction with the FIRE data, 18:4137 (R;US)

SOLAR SIMULATORS
Apparatus for synthesis of a solar spectrum, 18:2911 (PA;US)

SOLAR WATER HEATING
Modelling turbolence for thermal analysis of stratified storage tank, 18:2941 (R;IT)

SOLID ELECTROLYTE FUEL CELLS
Design, fabrication and testing of a solid oxide fuel cell stack for a 25 kW to 200 kW generator: Volume 1, Executive summary; Volume 2, Final report: March 1986–December 1990, 18:3511 (R;US)
Development of Solid Oxide Fuel Cell (SOFC): Third semi-annual progress report August 1991-January 1992, 18:3518 (R;NL)
Fabrication and evaluation of small (≈100W) SOFC (Solid Oxide Fuel Cell) reactors: Final report: Task 3.2. Preparation of ceramic bi-polar plates, 18:3519 (R;NL)
Manufacturing techniques for components of flat plate, solid oxide fuel cell (SOFC) reactors: First semi-annual progress report July 1991-December 1991, 18:3517 (R;NL)
Membrane catalyst layer for fuel cells, 18:3520 (PA;US)

SOLID STATE LASERS
See also NEODYMIUM LASERS
A Ti:Sapphire laser for the new polarized electron source, 18:4012 (R;US)

SOLID STATE PHYSICS
Solid State Division progress report for period ending March 31, 1992, 18:3567 (R;US)

SOLID WASTES
See also TAILINGS
Co-ordinated research programme on the use of nuclear and nuclear-related techniques in the study of environmental pollution associated with solid wastes: Report on the second research co-ordination meeting, Jakarta, Indonesia, 20-24 November 1989, 18:3686 (R;XA)
Co-ordinated research programme on the use of nuclear and nuclear-related techniques in the study of environmental pollution associated with solid wastes: Report on the third research co-ordination meeting, Vienna, Austria, 10-13 September 1991, 18:3716 (R;XA)
Comparative study of combustion product emissions of Pakistani coal briquettes and traditional Pakistani domestic fuels, 18:2572 (R;US)
Environmental pollution from solid wastes, 18:3720 (RA;XA)
Neutron activation studies of toxic elements in Czechoslovakian solid waste products, 18:3706 (RA;XA)

SOLIDIFICATION
1-D slab solidification TOPAZ2D comparison to analytical solution, 18:4824 (R;US)

SOLIDS
Experimental study of the hydrodynamics and cluster formation in a Circulating Fluidized Bed: Annual report, 1990, 18:2576 (R;US)

SOLUTES
Investigation of dispersion in porous media using fiber-optic technology, 18:3940 (R;US)

SOLUTIONS
See also AQUEOUS SOLUTIONS
LEACHATES
PROCESS SOLUTIONS
[Laser flash photolysis, EPR and Raman studies of liquids at elevated pressures], 18:3824 (R;US)

SOLVATATION
See SOLVATION

SOLVATED ELECTRONS
The selectivity in the reactions of hydrated electrons (e_{aq}) and hydroxyl radicals (OH) with solutions of gly-gly irradiated with ^{60}Co-gamma ray, 18:3889 (IA;LY)

SOLVATION
Experimental and computational studies of polar solvation, 18:3834 (RA;US)

SOLVENTS
See also ORGANIC SOLVENTS
Innovative technology demonstrations, 18:4208 (R;US)
The distillation and incineration of 132,000 liters (35,000 gallons) of mixed-waste hexone solvents from Hanford's REDOX Plant, 18:2791 (R;US)

SOURCE TERMS
Scoping assessment of radiological doses to aquatic organisms and wildlife – N Springs, 18:4363 (R;US)

SOUTHEAST REGION
See USA

SOUTHWEST REGION
See USA

SOVIET UNION
See USSR

SPACE
An integrated mission planning approach for the Space Exploration Initiative, 18:3031 (R;US)

SPACE LATTICES
See CRYSTAL LATTICES

SPACE POWER REACTORS
See also SPACE PROPULSION REACTORS
A facility for testing 10- to 100-kWe space power reactors, 18:3293 (R;US)
An integrated mission planning approach for the Space Exploration Initiative, 18:3031 (R;US)
Space power reactor ground test in the Experimental Gas Cooled Reactor (EGCR) at Oak Ridge, 18:3025 (R;US)
Survivability tests of foil and screen wicked niobium-1% zirconium/potassium heat pipes, 18:3029 (R;US)

SPACE PROPULSION REACTORS
A critical assembly designed to measure neutronic benchmarks in support of the Space Nuclear Thermal Propulsion program, 18:3033 (R;US)
An in-pile testing program to study the performance characteristics of coated particle fuels, 18:3032 (R;US)
Experimental and numerical optimization of the U-Zr-C ternary phase diagram, 18:3030 (R;US)

SPACE VEHICLES
Mathematical simulation of the induced γ-radiation in structural materials of spaceships, 18:3595 (R;SU;In Russian)

SPAIN
Experimental approach to monitoring the presence and movement of pesticides in unsaturated zone and groundwater, 18:4165 (RA;US)
Relationship between livestock activities and nitrogen compounds in the aquifers of the Asturias and Cantabria provinces (Spain), 18:4164 (RA;US)

SPALLATION
Isotopic effects in the disassembly of hot nuclear systems, 18:4601 (R;DE)

SPARTICLES
Radiative electroweak breaking and sparticle spectroscopy with tan $\beta \simeq (m_t)/m_b$, 18:4568 (R;XA)

SPECIAL PRODUCTION REACTORS

K REACTOR
L REACTOR
P REACTOR
R REACTOR
ANL slug failure decontamination program: Trip report, 18:3113 (R;US)

SPECTRA (FISSION)
See FISSION SPECTRA

SPECTROMETERS
See also ALPHA SPECTROMETERS
NEUTRON SPECTROMETERS
Measurement of ^{125}I K x and 35.5 keV photon emission probabilities, 18:4029 (R;PL)
Optical transcutaneous bilirubin detector, 18:4051 (PA;US)

SPENT FUEL CASKS
Development of the GA-4 and GA-9 legal weight spent fuel casks, 18:3911 (R;US)
Thermal testing of solid neutron shielding materials, 18:3913 (R;US)

SPENT FUEL ELEMENTS
GA-4/GA-9 honeycomb impact limiter tests, 18:3912 (R;US)
Integrated process for reprocessing spent nuclear fuel, 18:2694 (PA;US)
Purification of irradiated U^{235} (summary), 18:2679 (R;US)
Receipt and financial settlement provisions for nuclear research reactor fuels, 18:3278 (RA;XA)
Remarks on the transportation of spent fuel elements, 18:2704 (RA;XA)
Research reactor core conversion guidebook. V. 5: Operations (Appendices L-N), 18:3270 (R;XA)
Spent fuel storage, 18:2712 (RA;XA)
The transport of spent fuel elements of research reactors, 18:2708 (RA;XA)
Transnuklear spent fuel shipping containers, 18:2706 (RA;XA)
Transportation of irradiated TRIGA-LEU fuel, 18:2709 (RA;XA)
UKAEA's 'UNIFETCH' irradiated fuel transport containers, 18:2707 (RA;XA)

SPENT FUEL STORAGE
See also MONITORED RETRIEVABLE STORAGE
A safety study on spent fuel management: A study on the behavior of a spent fuel storage structure subject to heavy dropped impact loads, 18:2752 (R;KR;In Korean)
Development of spent fuel storage process equipment: Development of spent fuel remote handling equipment and maintenance technology, 18:2714 (R;KR;In Korean)
Research reactor core conversion guidebook. V. 5: Operations (Appendices L-N), 18:3270 (R;XA)
The development of spent fuel storage process equipment: Process equipment automation development, 18:2713 (R;KR;In Korean)

SPENT FUELS
A study on the behavior of defective LWR spent fuel, 18:2693 (R;KR;In Korean)
A study on the safety of spent fuel management: A scenario study on spent fuel management, 18:2746 (R;KR;In Korean)
A study on the safety of spent fuel management: A study on the radioactive gas treatment system, 18:2755 (R;KR;In Korean)
A study on the safety of spent fuel management: Radioactive source term modelling, 18:2749 (R;KR;In Korean)
Hanford Atomic Products Operation annual report, 1960, 18:2669 (R;US)
Iodine-131 releases from the Hanford Site, 1944–1947: Volume 1, Text: Hanford Environmental Dose Reconstruction Project, 18:4369 (R;US)
Iodine-131 releases from the Hanford Site, 1944–1947: Volume 2, Data: Hanford Environmental Dose Reconstruction Project, 18:4370 (R;US)
Solubility and speciation of uranium in the reference waters of TVO-92, 18:2808 (R;FI)
Strategy for OCRWM to provide training assistance to state, tribal, and local governments, 18:2699 (R;US)

SPIN-OFF
See TECHNOLOGY TRANSFER

SPOIL BANKS
Environmental aspects of coal mining wastes deposition and use, 18:2570 (RA;US)

SPRAY PONDS
See COOLING PONDS

SPRINGS
Development of hold-down spring for high burn-up fuel assembly, 18:3060 (R;KR;In Korean)

SPRINGS (WATER)
See WATER SPRINGS

SPRUCES
Biochemical and physiological investigations to detect effects of air pollutants on spruce in open-top-chambers, 18:4409 (RA;DE;In German)
Changes in photosynthetic activity, chlorophyll-fluorescence parameters and pigment content of differently damaged spruces during the vegetation period, 18:4395 (RA;DE;In German)
Experiment with exclusion of gaseous pollutants on spruce trees at Edelmannshof. Pt. B. Investigations on mineral cycling, 18:4406 (RA;DE;In German)
Heavy metal budget of Norway spruce, 18:4401 (RA;DE;In German)
Intermediates of carbohydrates and energy metabolism in spruce needles in relation to season and decline symptoms, 18:4391 (RA;DE;In German)
Open top chamber experiment 'Edelmannshof': Determination of biochemical parameters in needles of Norway spruce fumigated with unfiltered or charcoal-filtered air in comparison to untreated trees, 18:4408 (RA;DE;In German)
Physiological and cytomorphological investigations of undamaged and damaged spruce in the Northern Black Forest, 18:4392 (RA;DE;In German)

SQUID DEVICES
The fabrication and performance of $YBa_2Cu_3O_{7-x}$ SQUID magnetometers, 18:4697 (R;US)

SR-0F REACTOR

Assessment of heavy metal pollution in Ghana by nuclear-related techniques, 18:3688 (RA;XA)

TANK FARMS
See STORAGE FACILITIES

TANKS
Mitigation/remediation concepts for Hanford Site flammable gas generating waste tanks, 18:2789 (R;US)
Risk-based prioritization for the interim remediation of inactive low-level liquid radioactive waste underground storage tanks at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 18:2764 (R;US)
Specialized video systems for use in waste tanks: Revision 1, 18:2798 (R;US)
Tank Farm surveillance and waste status summary report for May 1992, 18:2786 (R;US)
Tank farm surveillance and waste status summary report for March 1992, 18:2785 (R;US)
Upgrade activities for the Criticality Safety Program of Hanford High-Level Radioactive Waste Tank Farm, 18:2790 (R;US)

TANTALUM
Investigations of correlated e^+e^- emission in heavy-ion collisions near the Coulomb barrier, 18:4665 (R;DE)

TANTALUM 181 TARGET
Neutrons scattering studies in the actinide region: Progress report, August 1, 1991–July 31, 1992, 18:4609 (R;US)

TANTALUM OXIDES
Transient radiation effects in annealed proton exchange $LiNbO_3$ and $LiTaO_3$ waveguides, 18:4046 (R;US)

TAU LEPTONS
See TAU PARTICLES

TAU NEUTRINOS
Measurement of the decay $\tau^- \rightarrow \rho^- \nu_\tau$, 18:4532 (R;DE)
Neutrino masses and solar neutrinos, 18:4567 (R;US)

TAU PARTICLES
Measurement of the decay $\tau^- \rightarrow \rho^- \nu_\tau$, 18:4532 (R;DE)
New measurements of the τ lepton mass, 18:4575 (R;US)

TAUONS
See TAU PARTICLES

TBP
Chemical Research Section progress report for November 1950, 18:2681 (R;US)

TECHNETIUM 99
Revision of JEF-2 evaluations for the long-lived fission products ^{129}I and ^{99}Tc: Presented at the NEA Specialist' Meeting on Fission Product Nuclear Data, JAERI, Japan, 25-27 May 1992, 18:4612 (R;NL)

TECHNOLOGY TRANSFER
National Energy Strategy: Technical Annex 5, Analysis of options to increase exports of US energy technology, 1991–1992 (Technical Annex 5. Analysis of options to increase exports of U.S. Energy Technology.), 18:3461 (R;US)

TECTONICS
Initiation of paleozoic cratonic basins of Western Gondwana land possibly associated with an upper Ordovician - lower Devonian distensible tectonics evidenced in Northern Cameroon, 18:3741 (IA;BR)
The use of radon gas techniques in water and soil for monitoring the tectonics and fault activities in Syria 1991, 18:4149 (R;SY;In Arabic)

TELLURIUM 114
Nuclear structure studies: Progress report (Dept. of Chemistry, Univ. of Maryland), 18:4584 (R;US)

TEMPERATURE COEFFICIENT
Study on temperature coefficient of reactivity in KUCA light-water moderated and reflected core - effect of M/F ratio and core shape on this quantity, 18:3207 (RA;XA)
Study on temperature coefficients of MEU and HEU cores in the KUCA, 18:3206 (RA;XA)

TEMPERATURE MEASUREMENT
Comparison of measurements of temperature and heat flux with a sonic-anemometer-thermometer and a fast platinum-wire-sensor, 18:4054 (R;DE;In German)

TENNESSEE
The coupling of synoptic and valley winds in the Tennessee Valley, 18:2947 (R;US)

TENSION (SURFACE)
See SURFACE TENSION

TERBIUM
[Atomic and electronic structure of metals and alloys: Clean surfaces and chemisorbed molecules], 18:3578 (R;US)

TERRESTRIAL ECOSYSTEMS
7th PEF status colloquium of March 5-7, 1991, Nuclear Research Center Karlsruhe, 18:4387 (R;DE;In German)
Project ARINUS: V. element cycling in the control watersheds and fertilizer leaching, 18:4400 (RA;DE;In German)

TERTIARY RECOVERY
See ENHANCED RECOVERY

TEST FACILITIES

URANIUM
Adsorption
Adsorption of uranium contained in industrial phosphoric acid on to Algerian bentonite Part II : Kinetic study, 18:2656 (R;DZ;In French)
Aerial Prospecting
Study of airborne gamma ray spectrometric data in prediction of uraniferous mineralizations in the Kuusamo area, northeastern Finland, 18:2632 (RA;XA)
Cladding
A review of means for encasing uranium in aluminum, 18:3058 (R;US)
Cost Benefit Analysis
Taxation impact on uranium mining in Canada and Australia, 18:2722 (RA;XA)
Uranium mining in Thuringia and Saxony, 18:2649 (RA;XA)
Density
Selected thermal properties and uranium density relations for alloy, aluminide, oxide, and silicide fuels, 18:3232 (RA;XA)
Emission
Effluent testing for the Oak Ridge Toxic Substances Control Act mixed waste incinerator, December 11, 1991, 18:2760 (R;US)
Environmental Impacts
Environmental issues related to the decommissioning of mine sites and to the rehabilitation of sites of the Wismut Corporation, Germany, 18:2818 (RA;XA)
Excretion
Internal contamination by natural uranium: monitoring by analysis of urine of individuals exposed by occupational inhalation, 18:4331 (I;BR;In Portuguese)
Exploration
Baseline uranium exploration surveys and their use in the early detection of potential natural hazards: A case history from Sudan, 18:2631 (RA;XA)
Case histories and new areas for uranium exploration in Bulgaria, 18:2638 (RA;XA)
Main types of uranium mineralization and uranium exploration in Viet Nam, 18:2639 (RA;XA)
New developments in uranium exploration, resources, production and demand: Proceedings of a technical committee meeting held in Vienna, 26-29 August 1991, 18:2720 (R;XA)
Some aspects of the uranium situation in Romania, 18:2633 (RA;XA)
Uranium occurrences in Shaba, Zaire, 18:2637 (RA;XA)
Uranium potential of the younger granites of Egypt, 18:2636 (RA;XA)
Uranium resources of the Union of Soviet Socialist Republics, 18:2644 (RA;XA)
Fission Tracks
Determination in soils of soluble uranium fraction in acid medium by fission tracks registration techniques, 18:4192 (I;BR;In Portuguese)
Fluorescence Spectroscopy
Applications of optical fiber to remote laser fluorescence analysis, 18:3768 (R;KR;In Korean)
Gamma Spectroscopy
Study of airborne gamma ray spectrometric data in prediction of uraniferous mineralizations in the Kuusamo area, northeastern Finland, 18:2632 (RA;XA)
Geochemical Surveys
Uranium in granitoids: Recognition criteria of uranium provinces in Brazil, 18:2630 (RA;XA)

Industry
Present state and future of the Czechoslovakian uranium industry, 18:2647 (RA;XA)

Ion-Atom Collisions
Investigations of correlated e^+e^- emission in heavy-ion collisions near the Coulomb barrier, 18:4665 (R;DE)

Leaching
Field test for in situ leach mining of uranium in Pakistan, 18:2648 (RA;XA)

Marketing
Uranium industry annual, 1991, 18:2719 (R;US)

Materials Handling
Procedure for handling uranium in 108-B, 18:2700 (R;US)

Materials Recovery
1953 at Hanford, 18:3151 (R;US)
Report on SCRUP analysis meeting at Chalk River, 18:2680 (R;US)

Meetings
New developments in uranium exploration, resources, production and demand: Proceedings of a technical committee meeting held in Vienna, 26-29 August 1991, 18:2720 (R;XA)

Mineralization
The location of uranium in source rocks and sites of secondary deposition at the Needle's Eye natural analogue site, Dumfries and Galloway, 18:4184 (R;GB)

Mines
Environmental issues related to the decommissioning of mine sites and to the rehabilitation of sites of the Wismut Corporation, Germany, 18:2818 (RA;XA)

Mining

WEINBERG LEPTON MODEL
Lepton-quark families, cosmic strings and "democratic" mass matrix, 18:4515 (R;XA)
Radiative electroweak breaking and sparticle spectroscopy with tan $\beta \simeq (m_t)/m_b$, 18:4568 (R;XA)
WEINBERG MODEL
See WEINBERG LEPTON MODEL
WEINBERG-SALAM GAUGE MODEL
Metastable cosmic strings in realistic models, 18:4512 (R;US)
WELDED JOINTS
Irradiation effects on fracture toughness of two high-copper submerged-arc welds, HSSI Series 5: Volume 1, Main report and Appendices A, B, C, and D, 18:3051 (R;US)
Sensing the gas metal arc welding process, 18:3910 (R;US)
WELDS
See WELDED JOINTS
WEST VIRGINIA
Measuring and predicting reservoir heterogeneity in complex deposystems: Annual report, September 20, 1990–September 20, 1991, 18:2603 (R;US)
Selection of area and specific site for drilling a horizontal well in Calhoun County, West Virginia, 18:2624 (R;US)
WESTINGHOUSE STANDARD REACTOR
Calculation of fuel pin failure timing under LOCA conditions, 18:3360 (RA;US)
Control system setpoint study for westinghouse plant, 18:3078 (R;KR;In Korean)
WHEY
A novel fermentation process for calcium magnesium acetate (CMA) production from cheese whey, 18:2893 (RA;US)
WHOLE-BODY COUNTING
Measuring program of the Federal Republic of Germany. Results of the whole-body counting in Russia during the period of June 17 to October 4, 1991, 18:4360 (R;DE;In German)
WIGGLER MAGNETS
Analysis of the superconducting wiggler magnets for the ATF Harmonic Generation FEL experiment, 18:3991 (R;US)
Fast excitation wiggler field measurement results, 18:3989 (R;US)
WILD ANIMALS
Five-year resurvey for endangered species on Naval Petroleum Reserve No. 1, (Elk Hills), Kern County, California, 18:2620 (R;US)
Scoping assessment of radiological doses to aquatic organisms and wildlife – N Springs, 18:4363 (R;US)
WIND
The coupling of synoptic and valley winds in the Tennessee Valley, 18:2947 (R;US)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND FARMS
See WIND TURBINE ARRAYS
WIND GENERATORS
See WIND TURBINES
WIND TURBINE ARRAYS
Cooperative field test program for wind energy systems: Effects of precipitation on wind turbine performance: Detailed test plan and quality assurance plan, 18:2948 (R;US)
WIND TURBINES
See also HORIZONTAL AXIS TURBINES
VERTICAL AXIS TURBINES
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines, 18:2954 (R;US)
Blade pitch control of small wind generator, 18:2950 (R;IT)
Development of the IEC-standard for wind turbines: Report of the 1991 activities, 18:2959 (R;NL;In English, Dutch)
Dynamic response testing of the "North Wind 100" Wind Turbine Generator: Final report, 18:2949 (R;US)
Manufacture and testing of low-maintenance wind-energy compact plants of 80 kW under industrial conditions, 18:2951 (I;DE;In German)
Reliability analysis methods for wind turbines: Task 1 of the project: Probabilistic safety assessment for wind turbines, 18:2958 (R;NL)
The influence of an advanced pitch control algorithm on wind turbine fatigue loads, 18:2953 (R;GB)
The theoretical investigation of the impact of control systems on fatigue of wind turbines, 18:2952 (R;GB)
WIRES
See also SUPERCONDUCTING WIRES
Comparison of calculated and measured irradiated wire data for HEU and mixed HEU/LEU cores in the ORR, 18:3213 (RA;XA)
WOLFRAM
See TUNGSTEN
WOLSUNG-1 REACTOR
Annual report of heavy water reactor fuel division, 18:3066 (R;KR;In Korean)
WOOD
Comparative study of combustion product emissions of Pakistani coal briquettes and traditional Pakistani domestic fuels, 18:2572 (R;US)
Portable high-speed biomass processor for Chunkwood: Final report, 18:2903 (R;US)

YOLK
See EGGS
YTTERBIUM 173 TARGET
Signature dependence of M1 and E2 transition probabilities for the $i_{13/2}$ and $f_{7/2}$ rotational band in ^{161}Dy, ^{163}Dy, ^{167}Er and ^{173}Yb studied by heavy-ion Coulomb excitation: Annex 17, 18:4597 (RA;XA)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM OXIDES
Flux pinning by 211 precipitates in melt-processed $YBa_2Cu_3O_x$, 18:3612 (R;US)
Properties of aligned $YBa_2Cu_3O_{7-\delta}$ superconductor as a function of oxygen deficiency δ, 18:3614 (R;US)
YTTRIUM PERCHLORATES
Addition compounds of perchlorates from yttrium and lanthanides elements with the N,N,N',N'tetramethyl amide of phthalic acid, 18:3801 (I;BR;In Portuguese)
YUGOSLAVIA
The K_o - standardization method of NAA as a tool for studying environmental pollution problems, 18:3694 (RA;XA)
YUKAWA NONLOCAL THEORY
Numerical simulation of heavy fermions in an $SU(2)_L xSU(2)_R$ symmetric Yukawa model, 18:4486 (R;DE)

Z

Z NEUTRAL BOSONS
A determination of the Zbanti b vertex correction from LEP data, 18:4540 (R;DE)
A study of jet rates and measurement of α_s at the Z^0 resonance, 18:4560 (R;US)
A test of the flavor independence of α_s at the Z^0 resonance, 18:4561 (R;US)
First measurement of the left-right cross section asymmetry in Z boson production at E_{cm} = 91.55 GeV, 18:4559 (R;US)
ZAIRE REPUBLIC
Air quality status in Kinshasa as determined by instrumental neutron activation analysis, atomic absorption spectrometry and ion-exchange chromatography, 18:3697 (RA;XA)
Study of atmospheric aerosols in Zaire by instrumental neutron activation analysis, atomic absorption spectrophotometry and ion-exchange chromatography, 18:3735 (RA;XA)
Study of the atmospheric aérosol composition in Zaire using nuclear and nuclear related techniques, 18:3701 (RA;XA)
ZENTRALINST. F. KERNFORSCHUNG
See ZFK ROSSENDORF
ZEOLITES
See also CLINOPTILOLITE
Photochemically induced charge separation and hydrogen evolution in microporous solids, 18:3828 (RA;US)
Photoinduced electron transfer reactions in zeolite cages, 18:3857 (RA;US)
ZERO POWER REACTORS
See also IPEN-MB-1 REACTOR
KUCA REACTOR
PDP REACTOR
SILOETTE REACTOR
Measurements and analysis of critical assemblies for research reactors with mixed enrichments, 18:3214 (RA;XA)
Safety analysis of JMTRC core conversion from HEU to MEU fuel, 18:3183 (RA;XA)
ZFK ROSSENDORF
1989 annual report of the Rossendorf Central Institute of Nuclear Research. Nuclear and Solid-State Physics Section and Accelerator Department of the Large Equipment Section, 18:4774 (R;DE;In German)
ZINC COMPLEXES
Zero-field splittings of the lowest excited states of zinc aromatic diimine-aromatic dithiol mixed-ligand complexes, 18:3856 (RA;US)
ZINC COMPOUNDS
See also ZINC HALIDES
ZINC OXIDES
Kinetic studies on metal interactions between water and clay minerals, 18:4246 (RA;DE;In German)
Sulfur capture mechanisms, 18:2962 (R;US)
ZINC HALIDES
Liquefaction research in pyrolysis, catalysis and coal dissolution. Kinetics of coal hydrogenation and cracking with Lewis acids, 18:2530 (RA;US)
ZINC OXIDES
The determination of the thickness of the film materials by the PIXE method, 18:3767 (R;SU;In Russian)
ZINC-BROMINE BATTERIES
Durability of carbon-plastic electrodes for zinc/bromine storage batteries, 18:3453 (R;US)
ZIRCALOY
See also ALLOY-ZR98SN-4
Hanford Laboratories Operation monthly activities report, September 1960, 18:2667 (R;US)
ZIRCALOY 4
A study on nuclear materials by neutron scattering, 18:4643 (R;KR;In Korean)
ZIRCONIUM
Moessbauer spectrometry study and metallography of paramagnetic phases from zirconium-iron system, 18:4680 (I;BR;In Portuguese)
ZIRCONIUM 95
Separation of Zr-95 and Nb-95 from fission products and its extraction with HPM B_zP/mineral acid systems, 18:3893 (IA;LY)
ZIRCONIUM ALLOYS
New fuel element development: properties of uranium-zirconium alloys, 18:3057 (R;US)

ZIRCONIUM NITRATES
TBP 20% diluent/H N O_3/H_2 O liquid-liquid extraction system: equilibrium data normalization of nitric acid, ruthenium and zirconium, 18:3807 (R;BR;In Portuguese)
ZIRCONIUM OXIDES
Tetragonal zirconia ceramics in Zr O_2-Ce O_2 system (Ce-TZP): preparation, characterization and mechanical properties, 18:3630 (R;BR;In Portuguese)
The effect of Bi_2 O_3 on the electrical properties of Zr O_2: 3 wt% Mg O ceramic solid electrolytes, 18:3628 (I;BR;In Portuguese)
ZYMOMONAS MOBILIS
Ethanol, the ultimate feedstock: A technoeconomic evaluation of ethanol manufacture in fluidized bed bioreactors operating with immobilized cells, 18:2883 (RA;US)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Codes Used on Index Lines

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ Zip _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ Zip _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no.

☐ Check/Money Order enclosed for $

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

_____ _____
Account Number **Card expiration date**

☐ Ship and Bill (see below for restrictions)

Employer identification number (9 digits) _ _–_ _ _ _ _ _ _

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

IV. SELECTIONS

Order number _____ Report number _____

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
